

Allianz RiskMaster Moderate Multi Asset Fund - C (Acc) - GBP

A risk targeted, multi-asset fund

Morningstar Rating™¹

Ratings as of 05/31/2024

Investment Objective

The Allianz RiskMaster Moderate Fund aims to achieve long term capital growth by maintaining a bias towards investments which are considered higher risk but may invest, to lesser degree, in investments considered lower to medium risk. The fund seeks to achieve this objective by actively investing in a broad range of asset classes across all economic sectors worldwide, and managing the risks associated with investing in these assets by utilising a broad range of risk management techniques.

Fund Manager

Gavin Counsell (since 11/01/2018) Matt Toms (since 01/01/2022)

Where the asset allocation sums to less than 100% the balance can be found in cash, a small amount of which is attributable to variation and initial margin related to derivatives exposure. Where the asset allocation sums to more than 100% this represents the leverage present in the funds. The Allianz RiskMaster funds make use of derivatives positions in order to deliver Efficient Portfolio Management to clients, this includes during some periods of low volatility the use of leverage. The reason we choose to use derivatives in the Allianz RiskMaster funds is to reduce costs to clients and benefit from greater liquidity. We take the risks posed by this instrument very seriously and have extensive experience in managing exposure of this nature.

Opportunities

- + High return potential of stocks in the long run
- + Broad diversification across numerous securities and asset classes
- + Steady interest income on bonds, capital gains opportunities on declining interest rates

Risks

- High volatility of stocks, losses possible
- Currency losses on global equity investments possible
- Limited participation in the yield potential of single securities
- Interest rates vary, bonds suffer price declines on rising interest rates. The fund unit price may be subject to increased volatility

- 1) © 2007 Morningstar, Inc., all rights reserved. The information given here: (1) is protected by copyright for Morningstar and/or its content providers; (2) may not be reproduced or distributed; and (3) is not guaranteed to be accurate, complete or up-to-date. Morningstar and its content providers assume no responsibility for any losses or damage that result from any use of the information provided. Past performance is not a guarantee of future results. To determine the Morningstar Rating, funds of a comparable group in issue for at least three years are considered. The long-term performance serves as a basis, taking into account fees and risk. As a result, the funds are awarded stars, which are calculated monthly: Top 10%: 5 stars; next 22.5%: 4 stars; middle 35%: 3 stars; next 22.5%: 2 stars; flop 10%: 1 star. A ranking, rating or award is not an indicator of future performance and is subject to change over time.
- 2) Calculated at the net asset value, excl. front-end load, distributions reinvested. Calculation according to method as defined by BVI, the German Fund Companies Association. **Any front-end loads reduce the capital employed and the performance.**
- 3) The stated ongoing charges reflect the total expense ratio (TER) of the Fund. In the event of a new issue, a short financial year or a fee adjustment, the Fund's ongoing charges will be estimated. Ongoing charges may vary from year to year and do not include transaction costs for the purchase or sale of assets for the Fund. In addition, no costs resulting from any performance-related remuneration are included in ongoing charges.
- 4) The Sharpe ratio states the relationship between the return generated by the fund and the investment risk. The fund's excess return versus the risk-free market rate is compared to volatility. Negative values are not meaningful.
- 5) Volatility measures the fluctuation range of the fund's performance over a specified period of time.
- 6) This is for guidance only and not indicative of future allocation.

Disclaimer

Investing involves risk. The value of an investment and the income from it may fall as well as rise and investors might not get back the full amount invested. Investing in fixed income instruments may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including positions with respect to short-term fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values of these instruments are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions. Allianz RiskMaster Moderate Multi Asset Fund is a sub-fund of Allianz International Investment Funds, an open-ended investment company with variable capital with limited liability organised under the laws of England and Wales. The value of the units/shares which belong to the Unit/Share Classes of the Sub-Fund that are denominated in the base currency may be subject to an increased volatility. The volatility of other Unit/Share Classes may be different and possibly higher. Past performance does not predict future returns. If the currency in which the past performance is displayed differs from the currency of the country in which the investor resides, then the investor should be aware that due to the exchange rate fluctuations the performance shown may be higher or lower if converted into the investor's local currency.
