Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Man Stockmarket Managed Fund Professional Accumulation Shares (Class C)

(ISIN:GB00B7X6MB80) Man Stockmarket Managed Fund (the 'Fund') is a sub-fund of Man Managed Funds ICVC (the 'Company').

Man Fund Management UK Limited, part of Man Group plc, is the Authorised Corporate Director.

Objectives and investment policy

- The Fund seeks to provide capital growth over the long term (over 5 year rolling periods) by investing at least 70% of its assets in a range of investment funds (UCITS, NURS, exchange traded funds and other types of collective investment schemes) which are operated, managed or advised by Man Fund Management UK Limited (the "ACD") or any of its associates. The Fund is actively managed, meaning that the Investment Adviser will use its expertise to pick investments to achieve the Fund's objective. Eligible investment funds are selected by considering their return potential, diversification benefits, volatility and their relative performance on a risk adjusted basis.
- All of the Fund's assets will be invested directly or indirectly in equities, including convertibles (an asset that can be converted at the option of the holder). Such indirect investment in equities may be done through collective investment schemes, exchange traded funds (index-tracking funds that can be traded on exchanges) and financial derivative instruments (financial instruments whose prices are dependent on one or more underlying assets).
- The Fund may also invest in other asset types permitted for investment by UCITS schemes, including government and corporate bonds (both investment and non-investment grade), convertible bonds, convertible preference shares, asset-backed securities, money market instruments, deposits, cash and cash-like instruments and warrants along with NURS specific permitted instruments. A portion of the Fund may, by way of the use of total return swaps, also gain exposure to the economic performance of certain collective investment schemes or strategies managed by one or more investment advisers in the Man Group.
- *Use of financial derivative instruments ("FDI").* The Fund may use FDI extensively to achieve the investment objective and for efficient portfolio management purposes to hedge (a technique using investments to reduce risk) against anticipated movements in a market or security, or where it is more economically effective than directly holding the underlying asset.
- *Benchmark.* The Fund is not managed with reference to a benchmark.
- *Dealing.* Shares can be bought and sold on each Business Day, as detailed in the Fund prospectus.
- *Investment Horizon.* This Fund may not be appropriate for investors who plan to withdraw their money within 5 years.
- *Treatment of income.* Income earned on investments will be added to the value of investors' shares.

Risk and reward profile

- The lowest category does not mean 'risk free'.
- The risk and reward profile is not guaranteed and may change over time.
- Historical data may not be a reliable indication for the future.
- The risk category for this share class is 5 as funds of this nature engage in strategies that typically have a moderate to high volatility. The calculation is based on the historical volatility of the Fund's performance. Where there is insufficient Fund performance the calculation is based on either the historical volatility of a relevant benchmark for the investment strategy or the manager's Value at Risk limit for the Fund. Please refer to the prospectus for further information relating to the Value at Risk.

The following risks may not be fully captured by the risk and reward profile:

- The value of investments designated in another currency may rise and fall due to exchange rate fluctuations. Adverse movements in currency exchange rates may result in a decrease in return and a loss of capital. It may not be possible or practicable to successfully hedge against the currency risk exposure in all circumstances.

- The Fund will be exposed to credit risk on counterparties with which it trades in relation to on-exchange traded instruments such as futures and options and where applicable, 'over-the-counter' ("OTC", "non-exchange") transactions. OTC instruments may also be less liquid and are not afforded the same protections that may apply to participants trading instruments on an organised exchange.
- The Fund will invest financial derivative instruments ("FDI") (instruments whose prices are dependent on one or more underlying asset) to achieve its investment objective. The use of FDI involves additional risks such as high sensitivity to price movements of the asset on which it is based. The extensive use of FDI may significantly multiply the gains or losses.
- The Fund's use of FDI may result in increased leverage which may lead to significant losses.
- The Fund may make investments or hold trading positions in markets that are volatile and which may become illiquid. Timely and cost efficient sale of trading positions can be impaired by decreased trading volume and/or increased price volatility.
- The Fund is subject to normal market fluctuations and the risks associated with investing in international securities markets and therefore the value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested.
- There is no guarantee that the Fund will achieve its investment objective.

A complete description of risks is set out in the prospectus section entitled 'Risk Factors'.
