Distribution and performance fees are not applicable. Costs may increase or decrease as a result of currency and exchange rate fluctuations.

Risk disclosure

The investments and investment strategies discussed are not suitable for, or applicable to, every individual. All investments involve risk, including the possible loss of capital and a positive return is not guaranteed over any period. Past performance does not predict future returns. Performance data shown in the document may not be in the local currency of the country where an investor is based. Actual returns may increase or decrease as a result of currency fluctuations. Dividends are not guaranteed and are subject to change or elimination. An investment concerns the acquisition of units or shares in the Fund and not underlying assets such as shares of a company, as these are only the underlying assets owned by the Fund. A decision to invest in the Fund should also take into account all the characteristics or objectives as described in the Prospectus. This Fund may not be appropriate for investors who plan to withdraw their money in the short term. A full list of relevant risks can be found in the KIID and Prospectus.

Investment objective

- The Fund aims to provide a stable stream of returns over the long term while at the same time minimising volatility and aiming to protect investors from losses as compared to the MSCI All Country World IndexSM.
- Actively managed and uses the MSCI All Country World Index (the "Benchmark") for performance comparison purposes. The Fund is not constrained by this Benchmark.
- Invests in equities (shares) of companies that, at the time of purchase, have a minimum market worth of US\$300m.
- Invests worldwide and is diversified across countries (minimum of 6), companies (minimum of 60) and sectors (minimum of 5).
- The Fund may invest up to 20% of its assets in the emerging markets.
- Forward foreign exchange transactions may be used to reduce the risk of adverse market changes in exchange rates. For temporary defensive purposes, the Fund may invest, without limitation, in money market instruments.

Investment strategy

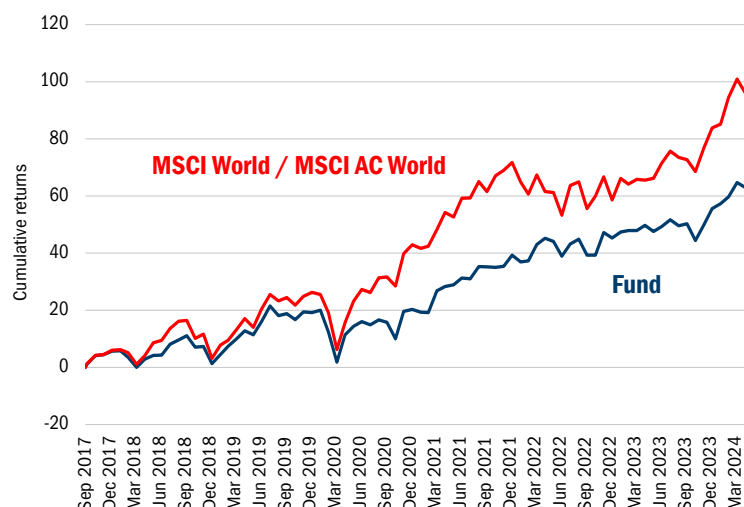

To employ fundamental and long-term analysis at both the top-down and bottom-up levels to find value in global equity markets. The focus is on a total return approach (dividend yield + five years' forecast earnings per share growth). Thorough and detailed macro-economic research helps Pyrford understand country-by-country dynamics and then equally thorough stock research is employed to help 'qualify' a potential portfolio. The approach is characterised by a focus on sustainable returns and capital discipline across the entire stock portfolio.

Risk and Reward Profile

The UCITS SRII risk category is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The risk category shown is not guaranteed to remain unchanged, and it may shift over time. The lowest risk category does not mean the investment is "risk free". The Fund is in category 5 because changes in the price of its shares have typically been moderate. The Fund may also be exposed to material risks that the risk indicator does not adequately capture which may include but not limited to credit risk, emerging markets risk, currency risk, operational risk and derivatives risk.

Performance - Class B Accumulation shares
25 September 2017 - 30 April 2024

Glossary

Annualised

Figures calculated over a year.

Benchmark

A target against which investment performance is measured. A benchmark is usually an index or the average performance of other similar funds.

Credit risk

A type of risk in relation to debt instruments, whereby the rating of the borrower may decrease, which will make the debt instrument fall in price.

Derivative

A contract between two parties that derives its value from the performance of the underlying entity. This underlying entity can be an asset, index or interest rate.

Distribution

The way that payments of dividends, income or interest are paid out to holders of a particular financial security.

Dividend

Regular income paid to shareholders by the company they invest in. Typically, it is taken from the profit or cash reserves of the company.

Dividend yield

The amount of income paid out by a investment trust to holders of units of the trust. It is calculated as a percentage of income relative to the net asset value of the trust.

Emerging market

Countries with a low per-head income compared to the developed world but with a functioning stock exchange. The potential for rapid growth makes emerging markets attractive for investors prepared to accept a higher level of risk. Emerging markets include Brazil, Russia, India and China. Other countries of significance include Mexico, Indonesia, South Africa, Poland and South Korea.

Foreign exchange forward transactions

Foreign exchange forward transactions refer to the facility for buying or selling of currencies at a future date at a predetermined price.

Fundamental value metrics

Fundamental value is the present value of future cash flows.

Macro-economic research

The overall, aggregate factors within an economy that affect financial markets. Examples of which include the level of economic output, employment, inflation and investment in a given country or geographical region.

Money market instruments

Money market instruments are short-term financing instruments which can be converted easily to cash.

Total return

The growth in value of a share holding over a specified period, including capital growth, interest, dividends (assuming they are re-invested to buy additional units of the stock) and distributions.

Transaction charges

The cost involved when buying or selling a good or service. An example would be a broker's fee.

Regulatory disclosure
