Authorised Corporate Director's Report

T. Rowe Price UK Limited, the Authorised Corporate Director (the "ACD") of T. Rowe Price Funds OEIC (the "OEIC" or "the Company"), presents its Interim Long Report and unaudited Financial Statements for the period from 1 January 2024 to 30 June 2024.

For each sub-fund of the OEIC the unaudited financial statements and the investment report are presented in their individual sections of this report which are detailed on the contents page. All information contained in the reports is at close of business as of 30 June 2024.

THE COMPANY

The OEIC is an open-ended investment company with variable share capital incorporated with limited liability and registered in England and Wales under number IC 001068 and authorised by the Financial Conduct Authority (the "FCA") pursuant to Regulation 14 of the Open-Ended Investment Companies Regulations 2001 (the "OEIC Regulations") on 30 August 2016.

The OEIC has been established as an Undertaking for Collective Investment in Transferable Securities in accordance with sections 236A and 237 of the FSMA ("UK UCITS") and is structured as an "umbrella company" under the OEIC Regulations, meaning that different funds may be established from time to time by the ACD with the agreement of the depositary and approval of the FCA.

The objective of the Company is to invest the scheme property in transferable securities, money market instruments, derivative instruments and forward transactions, deposits and units of collective investment schemes in accordance with the COLL Sourcebook with the aim of spreading investment risk and giving its shareholders the benefit of the results of the management of that property.

The Company has an umbrella structure and currently has twenty sub-funds, each with a different investment objective.

The sub-funds are segregated portfolios of assets and, accordingly, the assets of a sub-fund belong exclusively to that sub-fund and shall not be used to discharge directly or indirectly the liabilities of, or claims against, any other person or body, including the OEIC, or any other sub-fund, and shall not be available for any such purpose.

Shareholders are not liable for the debts of the OEIC. Shareholders are not liable to make any further payment to the OEIC after they have paid the purchase price of the shares.

CHANGES TO THE PROSPECTUS

Since 29 April 2024, the following changes were made to the Prospectus of the Company:

- Reorganisation of presentation of fund risks into generic risks and fund specific risks (plus addition of appendix I to display the same by sub-fund), annual risk refresh & general update to Risk Descriptions
- For the T. Rowe Price OEIC Global Technology Equity Fund, an update of comparator benchmark from MSCI All Country World Information Technology Index Net, to MSCI All Country World Information Technology 10/40 Index Net (a Capped Index), effective from 1st July 2024. The capped version of the Index is better suited to the fund's investment universe and regulatory environments, thus providing an improved comparator benchmark. However, this does not represent a change to investment objective, philosophy, or process
- Removal of the X Suffix in Share Class naming convention
- Update to indicative swing factors
- Update to past performance tables with 2023 returns and updated list of all launched share classes
- Addition of the T. Rowe Price OEIC US Structured Research Equity Fund
- Removal of the T. Rowe Price OEIC Responsible Global Growth Equity Fund
- Removal of the responsible exclusion list, SU risk, and 10% commitment to Sustainable Investment (SI) for T. Rowe Price OEIC Future of Finance Equity Fund and T. Rowe Price OEIC Global High Yield Opportunities Bond Fund

CHANGES TO THE INSTRUMENT OF INCORPORATION

Since 29 April 2024, there have been no significant changes made to the Instrument of Incorporation of the Company.

STATEMENT OF CROSS HOLDINGS

There are no holdings of the sub-funds of T. Rowe Price Funds OEIC by other sub-funds of the Company.

SECURITIES FINANCING TRANSACTIONS REGULATION

The European Regulation on reporting and transparency of securities financing transactions (SFTR), which aims to improve the transparency and monitoring of the financial system, entered into force on 13 January 2016 (and was subsequently made part of UK law by virtue of the European Union (Withdrawal) Act 2018). The SFTR applies to the ACD as a UK UCITS ACD and requires the ACD to comply with a series of obligations. In particular, the ACD will be required to provide investors with information on the use of securities

financing transactions (SFTs) and total return swaps (TRS) by the OEIC in all interim and annual reports for the OEIC.

The OEIC engages in Securities Financing Transactions (as defined in Article 3 of Regulation (EU) 2015/2365, securities financing transactions include repurchase transactions, securities or commodities lending and securities or commodities borrowing, buy-sell back transactions or sell-buy back transactions and margin lending transactions). In accordance with Article 13 of the Regulation, the OEIC's only involvement in and exposures related to securities financing transactions is its engagement on Total Return Swaps for the period ended 30 June 2024.

AUTHORISED CORPORATE DIRECTOR'S STATEMENT

We hereby approve the Interim Report and Financial Statements of T. Rowe Price Funds OEIC for the period ended 30 June 2024 on behalf of T. Rowe Price UK Limited in accordance with the requirements of the Collective Investment Schemes Sourcebook of the Financial Conduct Authority.

Director

29 August 2024

T. Rowe Price Funds OEIC Asian Opportunities Equity Fund

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a diversified portfolio of shares of companies in Asia.

Specifically, the fund invests at least 70% of total assets in shares and related securities issued by companies that are either incorporated in any Asian country or conduct most of their business in such countries. Types of securities may include common stocks, preferred stocks, warrants, American Depositary Receipts (ADRs), European Depositary Receipts (EDRs) and Global Depositary Receipts (GDRs).

The fund does not invest more than 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Seek to invest in companies at reasonable prices in relation to present or anticipated earnings, cash flow, or book value.
- Select those companies that have the most favourable combination of company fundamentals, earnings potential, and relative valuation.
- Apply negative screening for macroeconomic and political factors to temper bottom-up enthusiasm for specific securities.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most

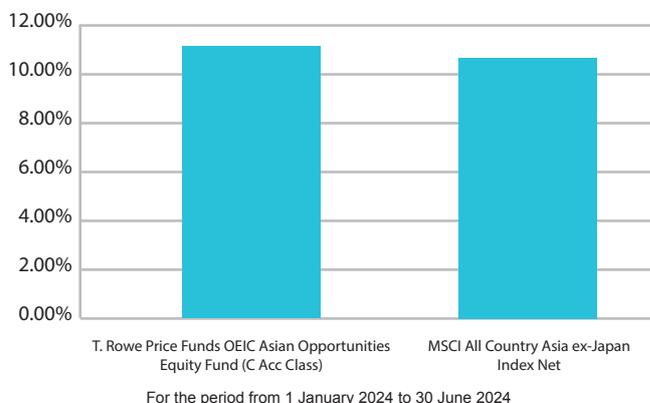

likely to have a material impact on the performance of the holdings or potential holdings in the fund's portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Asian Opportunities Equity Fund recorded an absolute gain and outperformed the MSCI All Country Asia ex-Japan Index Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

Asia ex-Japan equities rose over the six-month period. Large technology stocks in Taiwan soared on investor optimism toward artificial intelligence (AI), and supportive housing market policies in China were also a bright spot. However, concerns about a stronger US dollar kept the gains in check. The fund navigated these crosscurrents to outperform its benchmark, with stock selection in Taiwan and the information technology (IT) sector adding significant value.

- In Taiwan, our semiconductor holdings rallied on news of AI-fuelled demand for advanced chips and other products. Chip foundry Taiwan Semiconductor

T. Rowe Price Funds OEIC Asian Opportunities Equity Fund continued

Manufacturing Company (TSMC) and chip designer MediaTek were key relative contributors. Both firms illustrate our preference for upstream companies along the technology supply chain, which we expect to be more resilient even if AI spending slows given their high value-add business models, dominant market positions and strong pricing power.

- In the IT sector, besides TSMC and MediaTek, South Korean memory chipmaker SK Hynix was also a standout relative contributor. Investors eyed strong demand for its high-bandwidth memory (HBM) chips that power AI. We like SK Hynix's lead in the HBM chip market and expect the company to also gain from the wider chip industry's recovery.
- Our choice of communication services stocks also boosted relative returns. Shares of China-based online music platform Tencent Music Entertainment surged. Investors welcomed strong growth in its music subscription business, which helped counter weakness in its livestreaming segment. We view music subscription as a sturdier source of earnings and expect the business to expand further on increases in the number of paying users and their average spend.
- Conversely, our stock picks in financials curbed relative performance. Chailease's shares declined; the leasing company reported lower earnings and mixed asset quality trends across its key markets of Taiwan and China. We believe Chailease's non-performing loans in China may be approaching a peak and expect recovering asset quality to support its earnings and valuation.

How is the fund positioned?

We are focused on bottom-up stock selection in Asia ex-Japan's diverse markets. We especially like "compounders," or high-quality companies with clear business moats, capable management teams, and durable industry growth prospects that should help them expand steadily across market cycles. Quality cyclical businesses that look equipped to gain market share even in downcycles and firms with company-specific growth opportunities also look attractive to us. The portfolio's market and sector allocations largely reflect the outcomes of our active stock selection.

- China remained our largest absolute market position at the end of the reporting period, although we turned more underweight relative to the benchmark. We generally leaned away from economically

sensitive companies given China's underwhelming recovery, preferring stocks with unique growth drivers. We sold shares of some consumer-oriented businesses such as liquor maker Kweichow Moutai. We also divested holdings where our investment theses changed. An example was electric vehicle maker Li Auto, whose product cycle disappointed amid growing industry competition.

- Another sizeable absolute market position was in India, where we were relatively underweight versus the benchmark. We were cautious about pockets of expensive stocks and continued to like certain private-sector banks, which display long-term growth characteristics and undemanding valuations from our perspective. That said, we sold shares of these banks in favour of companies that we found to be attractive, including mall developer and operator Phoenix Mills.
- At the sector level, our investments in IT companies grew in prominence to become the biggest absolute allocation in the portfolio and a major relative overweight position. We actively adjusted our holdings within the buoyant sector and leaned toward stocks that we think have better risk-and-reward profiles. To illustrate, we invested in SK Hynix to diversify our exposure to the AI market theme and the recovering memory chip industry. Meanwhile, we sold TSMC's shares to manage the size of our overall position.

Top 10 issuers as at 30 June 2024

Issuer	Sector	% of Net Assets
Tencent Holdings Ltd.	Communication Services	7.31
Taiwan Semiconductor Manufacturing Co. Ltd., ADR	Information Technology	7.02
Samsung Electronics Co. Ltd.	Information Technology	6.95
MediaTek, Inc.	Information Technology	5.10
ASE Technology Holding Co. Ltd.	Information Technology	4.79

Bank Central Asia Tbk. PT	Financials	3.32
SK Hynix, Inc.	Information Technology	3.28
Taiwan Semiconductor Manufacturing Co. Ltd.	Information Technology	2.72

What is portfolio management's outlook?

Asia ex-Japan equities offer diverse investment opportunities from our perspective. A recovering technology hardware cycle featuring new demand drivers, policy support for certain industries, and structurally improving economies are among the

T. Rowe Price Funds OEIC Asian Opportunities Equity Fund continued

tailwinds that we see. The region's overall valuation also looks attractive relative to developed markets.

We think China is committed to stabilising the property market, and more policy action may come should the latest rescue measures prove lacking. While supportive policies have the potential to lift the stock market, on the ground sentiment suggests that consumer confidence remains weak. Notwithstanding China's economic challenges, we still see solid companies displaying earnings growth potential and undemanding valuations.

India's long-term economic growth potential is a draw for many investors. In the nearer term, we will be watching the country's budget announcement closely following unexpected general election results. While we think major policy shifts are unlikely, we would not rule out the potential for investors to revisit pockets of valuations that had surged on strong hopes of policy continuity.

We also see compelling secular growth prospects for Indonesia and the Philippines. Although currency volatility has hurt risk appetite, we expect the vibrant populations in these countries to power domestic demand over the long run. Meanwhile, a dovish pivot in US interest rate forecasts and a weaker US dollar would likely bode well for both countries' currencies and stocks.

South Korea and Taiwan occupy important roles in the technology supply chain, and we expect the technology hardware cycle and AI to remain key drivers of their stock markets. We continue to assess the sustainability of AI spending closely. In South Korea, we also see promise in the government's push for better corporate governance, although we think it is likely to be a multiyear journey.

Potential risks exist. US interest rate expectations and their impact on Asian currencies, the direction of China's housing market and consumer sentiment, US-China relations, and the durability of AI investments are among the key issues that we monitor. We believe bottom-up stock selection is critical to building a well-diversified portfolio that is ready for various uncertainties.

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately high.

The SRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRI score is based on the highest score among all classes of the fund.

Lower risk ← → Higher risk
Potentially lower reward Potentially higher reward

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

DISTRIBUTION TABLE (UNAUDITED)

Interim distribution for the six months ended 30 June 2024

Group 1 Shares purchased prior to 1 January 2024

Group 2 Shares purchased on or after 1 January 2024

	Net revenue p per share	Equalisation p per share	Distribution payable 30.08.24 p per share	Distribution paid 31.08.23 p per share
C Inc S 0 shares				
Group 1	8.842867	–	8.842867	6.321040
Group 2	8.842867	0.000000	8.842867	6.321040

Equalisation applies to shares purchased during the distribution period (Group 2 shares). It is the average amount of revenue included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital.

Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

T. Rowe Price Funds OEIC China Evolution Equity Fund

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments over the long term (a minimum of 5 years).

Investment policy

The fund is actively managed and invests in a portfolio of shares of Chinese companies and may have significant exposure to smaller capitalisation companies (up to 45% of the total assets of the fund, where by smaller capitalisation the investment manager considers companies with a market capitalization below USD 5 billion). The fund aims to invest in companies with high returns on capital in the long-term, focusing on opportunities in the evolving Chinese economy.

The fund invests at least 80% of total assets in shares and related securities issued by companies that are either incorporated in China, Hong Kong, Macau or Taiwan, or conduct most of their business in China. The securities may be listed within and/or outside of China. Types of securities may include common shares (including A, B and H shares, Red-chips and P-chips), preferred shares, warrants, American Depository Receipts (ADRs), Chinese Depository Receipts (CDRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs). Investments in China A shares may be made through the Shanghai-Hong Kong Stock Connect or the Shenzhen-Hong Kong Stock Connect programs and the QFII program.

The fund may also invest up to 20% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management. The use of derivatives is expected to be limited.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager’s approach is to:

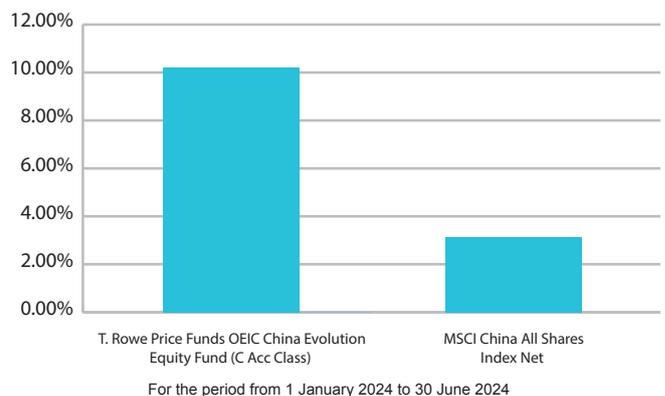

- Seek attractive investment opportunities across Chinese companies, listed both onshore and offshore, across the market cycle (a minimum of 5 years).
- Employ fundamental research to identify change in business fundamentals or investor behaviour that will act as a catalyst to increase a company’s value.
- Seek to purchase shares of companies at reasonable prices in relation to present or anticipated earnings, cash flow, or book value.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund’s portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The China Evolution Equity Fund recorded an absolute gain and outperformed the MSCI China All Shares Index Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

T. Rowe Price Funds OEIC China Evolution Equity Fund continued

What factors influenced the fund's performance?

Chinese equities advanced in the first half of the year after a volatile first quarter as Beijing ramped up its stimulus measures and shifted its policy focus to tackling the protracted downturn in the property market. Upward corporate earnings revisions and moves by companies to enhance shareholder returns helped offset the resurgence of trade tensions between China and the West.

Within the portfolio, stock selection in industrials and business services, information technology (IT), and communication services significantly contributed to the fund's performance during the review period. Conversely, our lack of exposure to financials was a drag.

- Within industrials, Yangzijiang Shipbuilding was a key contributor as its share price rose on strong orderbook momentum. A beneficiary of the increased demand for ships, the total order book balance reached USD 16 billion in May, which could cover four years of operations. XJ Electric, a supplier of converter valves, a critical component for ultra-high-voltage (UHV) transmission lines, also helped as China increases investments in UHV to support the transmission of renewable power.
- ASMPT, a supplier of semiconductor manufacturing equipment, was a source of strength in the IT sector. Its shares benefitted from the company's advanced packaging business, which is currently a bottleneck for producing chips for artificial intelligence.
- Among communication services names, Tencent Music Entertainment, a large music streaming services provider, helped following year-to-date share price gains. The company's business transformation towards recurring music services and away from live streaming has been well received by the market.
- In contrast, not owning state-owned banks dented performance within financials as their share prices gained following higher dividends.

How is the fund positioned?

We continued to identify companies beyond the mega-cap names that are likely to emerge as new growth leaders. We remain focused on finding businesses with high visibility in growing earnings and improving fundamentals regardless of the macroeconomic environment and the market's short-term focus.

Companies taking the lead in areas with low penetration such as online recruitment and online music fall within this category as they are showing rapid growth through technological innovation.

We reassessed traditional industries which have experienced a trough in recent years and are now seeing a shortage in supply and growth in end-market demand. We found opportunities in sectors, such as railway equipment, ultra high-voltage power grids, and nuclear power, which should be experiencing new investment cycles. Lastly, we sought companies entering their "harvest cycle" phase, or those which after investing heavily in their businesses in the past are now generating free cash flows. We like these companies as they also become more shareholder friendly, improving their dividends and buybacks.

- Industrials and business services was our largest sector position in absolute terms. We own companies that will likely gain from the structural trends of technology upgrading, electrification, the digitisation of China's power grid, and the consolidation of the shipbuilding industry. We initiated a position in CRRC, a dominant rail equipment provider. We expect a multi-year rail equipment upcycle as rail traffic recovers and China has underinvested in rail equipment in recent years.
- We increased our allocation in communication services, where we have a sizeable absolute position. We initiated a position in Kuaishou Technology, a short video platform which has improved its revenue mix in recent years, leading to more sustainable growth and better margin structure. We bought shares in China Tower, a telecommunications company that fits our search for businesses that are in their "harvest stage" as it has completed its infrastructure buildout and has good cash flow and improving shareholder returns.
- In contrast, we trimmed our allocation in consumer discretionary, where we have a considerable absolute position. In particular, we sold some shares in Li Auto, an electric vehicle maker. Our position in Li Auto hurt the portfolio as its shares slumped due to heightened competition and the disappointing launch of its first full-electric model MEGA. While we continue to like Li Auto's strategy and management, we cut our position as 2024 appears to be a transition year for the automaker.

T. Rowe Price Funds OEIC China Evolution Equity Fund continued

Top 10 issuers as at 30 June 2024

Issuer	Sector	% of Net Assets
Kanzhun Ltd., ADR	Communication Services	7.38

Yangzijiang Shipbuilding Holdings Ltd.	Industrials	2.85
Fuyao Glass Industry Group Co. Ltd.	Consumer Discretionary	2.77
Xuji Electric Co. Ltd.	Industrials	2.66

What is portfolio management's outlook?

We remain optimistic about China. While the country is facing challenges brought about by the remodeling of its economy and shifting geopolitical dynamics, it remains a fertile ground for finding new growth leaders. These are companies beyond the mega cap names which are pursuing innovation, benefitting from favourable supply-demand dynamics in traditional industries and those improving shareholder returns.

The direction of policy from Beijing has become clearer and policy support has become more coordinated in recent months leading to improving investor sentiment, however, we also recognise that the positive changes within many of China's outstanding companies remain underappreciated and overlooked. Moreover, we find that valuations of Chinese equities are attractive compared to their global counterparts. This should create an attractive entry point for active long-term investors.

We think there are several long-term trends that may drive investment opportunities in China. Chinese companies are moving up the value chain, gaining market share, and increasing their competitiveness in many areas such as auto, energy equipment, and construction machinery. While supply chain realignment is taking place, whereby companies are moving certain aspects of production outside China to serve the US market, we also find that local substitution is accelerating at a faster pace than the market appreciates. Some local companies are quickly catching up by narrowing the technology gap.

We think that our differentiated investment approach combined with the depth and breadth of our research should enable us to identify opportunities beyond the well-discovered growth stocks in China.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately high.

The SRRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a diversified portfolio of shares of companies in Europe (excluding the UK).

Specifically, the fund invests at least 70% of total assets in shares and related securities issued by companies that are either incorporated in any European country (excluding the United Kingdom) or conduct most of their business in such countries. Types of securities may include common stocks, preferred stocks, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund does not invest more than 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Use fundamental research to identify and assess long-term investment opportunities, looking for companies with high returns on capital and capable of providing sustainable earnings across the market cycle.
- Apply a style-agnostic, focus on quality, avoiding style constraints and investing in quality companies while maintaining a balanced portfolio through market cycles.

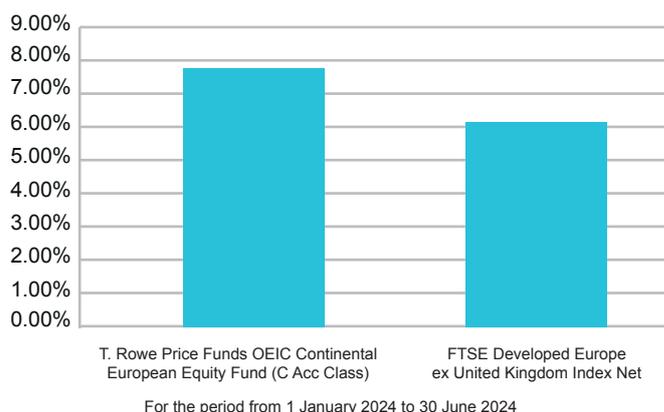

- Use a disciplined approach to valuation, seeking to buy companies at a clear discount to their intrinsic value.
- Use a risk management approach assisted by diversification and quantitative analysis.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund's portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Continental European Equity Fund recorded an absolute gain and outperformed the FTSE All World Developed Europe ex United Kingdom Index Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

European shares rallied to record highs in the first half of 2024 amid expectations for a “soft landing” for the economy and hopes of central banks easing monetary policy. Within the portfolio, both stock selection and group allocation supported relative performance.

T. Rowe Price Funds OEIC Continental European Equity Fund continued

Information technology (IT) was the top-contributing sector due to stock picking and an overweight allocation, followed by energy, where our choice of securities contributed positively. On the other hand, our choice of securities in financials and health care were the main drags on relative performance.

- ASML Holding, the dominant supplier of high-end lithography machines for semiconductor manufacturers, was the best absolute and relative performer in the IT sector. Demand for the company's cutting-edge extreme ultraviolet systems, driven by increased growth in artificial intelligence, and better-than-forecast revenue growth buoyed the shares.
- Shares of Galp Energia Sgps, an integrated oil and gas company with refining and solar businesses, outperformed in the energy sector, rising sharply after the company discovered a large oil field in Namibia. The stock rose further after the first well test showed the oil reservoir was much bigger than previously thought, with the company now guiding for 10 billion barrels of oil equivalent.
- Conversely, Edenred, a provider of prepaid corporate services including employee vouchers and loyalty programmes, performed the worst among our financial holdings. The shares suffered at the start of the year after a probe by the Italian authorities into a public tender in 2019 and struggled to recover despite strong quarterly results. Political uncertainty in France also weighed on French companies in June.
- Sartorius Stedim Biotech, the bioprocessing subsidiary of Sartorius and a leading provider of single-use biopharmaceutical fermentation and fluid management solutions, was the worst relative and absolute performer among our holdings. The stock fell after somewhat disappointing first-quarter earnings, with a decline in revenue caused by inventory destocking and weak sales in China. At the end of the period, political uncertainty in France also exerted downward pressure on the share price.

How is the fund positioned?

The portfolio retained a balanced stance with a slightly defensive profile in macroeconomic terms, given the uncertain economic backdrop and challenges facing policymakers. At the sector level, our underweight exposures versus the benchmark to industrials and business services, materials and consumer discretionary are countered by similarly modest active exposures in

the cyclical areas of energy, financials and IT. We are looking to hold companies that exhibit pricing power or that are inflation beneficiaries at reasonable multiples.

- We significantly pruned our overweight allocation to health care. Swapping Swiss pharmaceutical company Roche Holding for French pharmaceutical company Sanofi was the largest change. Roche has been developing new products after established treatments came under competitive pressure from biosimilar products. However, our conviction in Sanofi is higher. We believe the Zantac litigation risk has been meaningfully reduced and there is now an encouraging drug pipeline, especially in immunology. Unlike the market, we do not believe a large acquisition is being planned.
- We deepened our underweight allocation to the consumer staples sector after selling out of our holdings in Davide Campari-Milano, one of the largest global spirits producers, and Remy Cointreau, a global drinks company that owns Cognac. Davide Campari-Milano has the potential for strong long-term growth, but we feel that the company is entering an uncertain stage after a change in top management. As for Remy Cointreau, sales in US and China, the two main markets, are slowing down. China also launched an anti-dumping probe into Cognac.
- We increased our overweight exposure to the financials sector. We reopened a position in Allianz, a global insurer and asset manager, after our analyst upgraded the stock to a Buy. In our view, the retail business is poised for a significant cyclical upswing thanks to repricing and efficiencies. We believe Allianz is less exposed to declining interest rates and expect it to continue making high and stable capital distributions. We funded the new position by exiting Hannover Rueck, a global reinsurer, after strong performance reduced the potential upside.

T. Rowe Price Funds OEIC Continental European Equity Fund continued

What is portfolio management's outlook?

Headline inflation has slowed, and economies are now seemingly on the path to a modest recovery. Even so, macroeconomic and political uncertainty remains high, and equity markets may struggle after central banks doused expectations for a sharp reduction in interest rates and France and the UK called early elections.

Policy has become tentatively less restrictive in Europe, but sticky underlying inflationary pressures continue to pose a challenge. Governments, companies and consumers appear to have weathered the disruption in energy markets caused by Russia's invasion of Ukraine, although the long period of elevated interest rates is straining household and corporate resources. Event risk has also risen with the election decisions by France and the UK, raising the prospect of increased market volatility in the near term.

While European equities have outperformed expectations this year, the sluggish economy and the high cost of capital could make earnings estimates more vulnerable to downgrades. These factors have depressed valuations, even of high-quality companies, yet they also present us with opportunities.

In these trying conditions, it is important to remain focused on fundamental company research where we feel we can have an edge. On balance, the portfolio's stance remains slightly cautious. We believe the investment attractions of our holdings in high-quality companies that have a more sustainable growth outlook should become stronger in a slower economic environment. While an awareness of the macroeconomic and political environment is necessary, our goal is to construct a portfolio that prospers over the medium term, whatever transpires.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately high.

The SRRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

FUND INFORMATION

Investment objective

To deliver positive returns (after the deduction of costs and charges), comprising of income and growth, over rolling 3-year periods. A positive return is not guaranteed over this or any time period and a capital loss may occur.

Investment policy

The fund is actively managed and invests mainly in a portfolio of bonds of all types from issuers around the world, including emerging markets.

Specifically, the fund invests at least 70% of total assets in debt securities issued by governments, government agencies, companies and banks. Portfolio debt securities can include fixed and floating rate bonds, convertible bonds, warrants and other transferable debt securities of any type, including high yield securities. The fund may invest more than 20% of assets in asset-backed securities (ABS) and mortgage-backed securities (MBS).

The fund aims to hedge any non-Sterling assets to Sterling.

The fund does not invest more than 10% of assets in shares and related securities, 25% of assets in convertible bonds, and 30% of assets in money market securities, with total investment in these categories limited to 30% of assets. However, for temporary defensive purposes, investments in money market securities may exceed 30% of assets.

Derivatives and techniques

The fund may use derivatives for hedging, efficient portfolio management and to seek gains. The fund may also use derivatives to create synthetic short positions in currencies, debt securities, credit indices and equities. The fund may use total return swaps (TRS). Investor should refer to the "Total Return Swaps" section of the Prospectus for more details on the expected and maximum use of total Total Return Swaps by the fund.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

The fund may also invest in other funds to gain exposure to the above assets. These will usually, but not always, be funds that are associated with the ACD.

Investment process

- The investment manager's approach is based on proprietary fundamental research and relative value analysis.
- The investment manager seeks to add value primarily through duration management, currency selection, sector allocation and security selection.
- The investment process places a strong emphasis on downside protection, utilising robust risk management practices and portfolio diversification to manage the overall risk profile.
- Assess environmental, social and governance ("ESG") factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund's portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macro-economics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

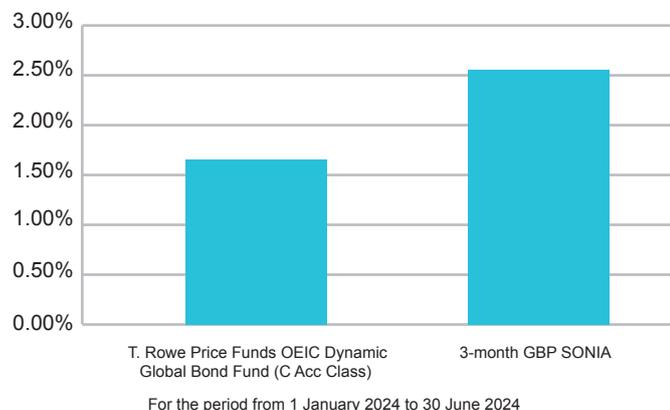

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Dynamic Global Bond Fund delivered a positive absolute return but underperformed the three-month GBP SONIA benchmark in the six-month period ended 30 June 2024.

T. Rowe Price Funds OEIC Dynamic Global Bond Fund continued

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

Global bond yields rose in the first six months of this year as investors reduced their expectations for multiple interest rate cuts in 2024 amid resilient economic data, sticky inflation and cautious guidance from central banks. Yields retraced later in the period as data cooled and some major economies did begin cutting interest rates. Risk markets advanced with key US equity market indices hitting record highs, led by large-cap technology stocks. High yield corporate bonds outperformed their investment-grade counterparts.

- Our overall duration and country positioning had a moderately negative impact on returns. (Duration measures a bond's sensitivity to changes in interest rates.) A short duration exposure in the US and Germany had a strong positive contribution on performance. However, this was offset by our long exposure in Australia and New Zealand, and our US curve steepener position, which will perform well if longer-maturity yields rise in relation to short-dated yields. Our select long duration exposures in local currency emerging market government debt also hindered performance.
- Our currency positioning dragged on returns owing to our long position in the Mexican peso, which sold off after elections in June. A larger-than-expected majority for the new government raised concerns that it could implement policies that will lead to deteriorating fiscal fundamentals. A long Australian dollar position held earlier in the year produced losses as inflation pressures eased and economic growth slowed.

- The fund generated positive returns from credit, specifically from selection in US high yield corporate bonds and also from holding long risk positions to US high yield through derivatives instruments. High yield performed well due to a positive appetite for riskier assets, its lower sensitivity to changes in yields, and the effect of income returns.

How is the fund positioned?

We held a short duration bias for most of the period, predominantly through our short position in the US. This reflected our view that growth would remain resilient and that investor expectations for interest rate cuts were excessive. We reduced our US short position in June amid near-term softness in economic data, but we ultimately expect US growth to remain healthy and for reflation concerns to persist. Monetary easing cycles are likely to be gradual as a result. At the same time, China's economic slowdown remains entrenched. There is also scope for renewed focus on fiscal concerns and high levels of needed bond issuance, while idiosyncratic political risk is likely to remain a factor over the second half of the year.

- At the end of the period, the fund's overall duration was just below one year. We shifted to a short duration position in the US during the period as we expect the US economy to remain resilient, while we see scope for renewed concerns over fiscal fundamentals and the high level of bond issuance. We maintained long positions in countries where we see continued slow economic growth, particularly China and New Zealand. In Europe, we held short exposures to France and Italy due to concerns over fiscal sustainability, increasing both positions in June amid political uncertainty, and introduced a long position in German bunds.
- In currencies, the fund has held a long position in the US dollar, which we see as well placed against Asian currencies particularly, supported by the Federal Reserve's patient approach to interest rate cuts and more resilient US growth. In contrast, with China's economic slowdown seemingly entrenched, we increased our short positions in the Chinese renminbi and Taiwanese dollar and added a short position in the South Korean won.
- In terms of exposure to markets with credit risk, we increased our long exposure to US high yield over

T. Rowe Price Funds OEIC Dynamic Global Bond Fund continued

the period through synthetic credit instruments. These have the advantage of being relatively liquid, which is important as we are cognisant of possible near-term shifts in sentiment and that credit valuations have grown richer. We kept our long exposure to US credit with a preference for short-dated bonds, and we maintained options on US equities so that the fund will likely benefit if equity markets fall.

We see credit as still broadly well underpinned and continue to look to harvest attractive income, but we acknowledge that valuations are somewhat stretched and so maintain liquidity in this part of the portfolio. Risk assets look well supported overall, however, as investors appear comfortable with the backdrop for the corporate and household sectors and with little sign of strong equity market momentum fading.

Added to these various global factors, we are in a phase of increased political uncertainty and idiosyncratic risk, particularly for Europe, which is exacerbating fiscal concerns, while the US presidential election will become a key factor too. It is important to be tactical and keep a liquid profile in the portfolio to afford flexibility to adapt to changes.

What is portfolio management's outlook?

We see US growth remaining healthy and the potential for loosening financial conditions to cause reflation risks to resurface. This underpins our continued short duration stance in the US. Uncertainty around the trajectory of monetary easing, which will likely be gradual, could prompt further volatility.

The ongoing entrenched slowdown in China, and the low growth and deflation environment across Asia informed our select short positions in Asian currencies and broadly long duration positioning in the region. This scenario looks set to persist in the absence of a policy response from the Chinese authorities.

Our curve steepener bias (positioning for longer-dated yields to underperform short-dated yields) in several developed markets remains in place as we think long-dated yields could face pressure from high issuance levels and fiscal concerns.

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

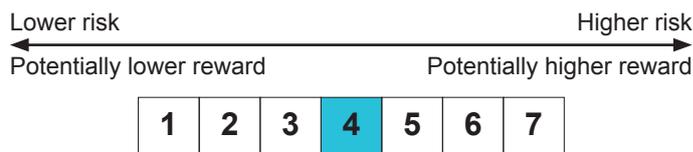

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately high.

The SRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a widely diversified portfolio of shares of emerging market companies.

Specifically, the fund invests at least 70% of net assets in shares and related securities issued by companies that are either incorporated in one of the economically emerging countries of Latin America, Asia, Europe, Africa and the Middle East or conduct most of their business in such countries. Types of securities may include common stocks, preferred stocks, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund may invest up to 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Seek companies that are undervalued but have the potential for improving earnings over time.
- Emphasise companies that are supported by a secure dividend or strong balance sheet.
- Employ fundamental research to identify change in a business that will act as a catalyst to re-rate the company.

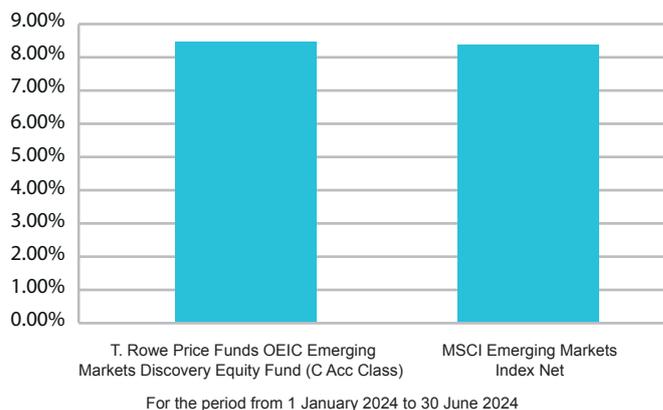

- Employ a bottom up portfolio construction process.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund’s portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Emerging Markets Discovery Fund recorded an absolute gain and performed in line with the MSCI Emerging Markets Index Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

Stock picks in industrials and business services contributed the most to the fund's performance at the sector level. In contrast, our exposure to financials was the largest detractor. From a country perspective, the strength in information technology (IT) stocks supported stock selection in South Korea, whereas our underweight allocation to Taiwan dragged on returns.

T. Rowe Price Funds OEIC Emerging Markets Discovery Equity Fund continued

- Within industrials, our off-benchmark position in Yangzijiang Shipbuilding boosted the fund. Shares of the Chinese shipmaker advanced as strong order momentum pointed to better-than-expected revenues and visibility on earnings for the next few years.
- On a country basis, security selection in South Korea meaningfully lifted portfolio returns. Within IT, chipmaker SK Hynix's share price jumped to record highs on expectations that the artificial intelligence (AI) boom would bolster demand for its high-bandwidth memory chips. Separately, carmaker Hyundai Motor gained on news of its plans to list its Indian unit, alongside hopes for increased shareholder returns in view of South Korea's Corporate Value-Up programme aimed at improving corporate governance in the country.
- Our below-benchmark exposure to Taiwan was negative as momentum for AI drove a robust rally, though good security selection mitigated our losses. An underweight exposure to global foundry Taiwan Semiconductor Manufacturing (TSMC) was costly to us. However, electronics manufacturing services giant and key Apple supplier Hon Hai Precision Industry was the biggest stock-level contributor as its shares surged on an upbeat demand outlook for its AI servers.
- Conversely, our stock preferences in the financial sector, particularly in Brazil, dampened results. Shares of Banco BTG Pactual and lender Banco Bradesco both declined, tracking wider weakness across Brazilian markets due to rising fiscal worries. We think Banco BTG Pactual, an investment bank, continues to execute well against a challenging backdrop while improving its revenue mix. Turning to Bradesco, we think measures announced by the new management, such as cost cutting and a more coherent high-income strategy, could spur improved earnings.

How is the fund positioned?

We continued to seek overlooked stocks with favorable risk-reward characteristics resulting from identifiable fundamental change that could act as a catalyst for re-ratings. We favoured businesses that have taken the initiative to implement self-help measures and have achieved considerable progress.

China remains our largest absolute country position even as we adjusted our positioning there, notably in the financial sector. Financials remains our largest absolute sector allocation. We also increased our exposure and narrowed our underweight position in India. From a sector perspective, the portfolio has a substantial IT weighting, and we further raised our allocation. Conversely, materials was previously one of the portfolio's biggest overweight positions relative to the benchmark, but we brought down our exposure over the period.

- In China, we rotated out of more defensive stocks in favour of slightly more cyclical-oriented names with compelling asymmetric risk-reward dynamics. For instance, in financials, we took profits from state-owned lender China Construction Bank. With the proceeds, we bought Bank of Ningbo, a high-quality lender with a niche small- and medium-enterprises franchise, as brightening consumer sentiment could drive improved earnings visibility.
- We are still underweight India relative to the benchmark, although we increased our allocation significantly over the review period. Most notably, we invested in gas distributor Indraprastha Gas. We think it is well positioned given rising penetration of compressed natural gas vehicles.
- By sector, we increased our IT allocation as we started a position in TSMC to manage our exposure. Our below-benchmark position in the stock and the Taiwanese market had widened significantly after TSMC's strong run. Against this, we substantially lowered our exposure to materials due to stock-specific reasons. We sold Mexican miner Fresnillo amid concerns about execution risks. We also took advantage of share price strength to trim our holdings in conglomerate Grupo Mexico and Swiss-headquartered multinational building materials giant Holcim.

T. Rowe Price Funds OEIC Emerging Markets Discovery Equity Fund continued

What is portfolio management's outlook?

We remain positive about prospects for emerging markets. Expectations of interest rate cuts and accelerating earnings growth are intact and will likely serve as positive catalysts. Longer-term structural developments, including changes in global supply chains resulting from geopolitical tensions, the trend of nearshoring due to deglobalisation, and the need for increased infrastructure spending after years of underinvestment could drive multiyear investment cycles. Higher capital spending required for decarbonisation and the green energy transition is also likely to benefit companies across various sectors.

Across markets, we think China's latest housing support measures reflect the government's intent to stabilise the economy and bolster investor confidence. Company valuations are also undemanding when compared to historical levels. In India, the ruling party's smaller-than-expected election win raises questions about potential shifts in policy priorities but is unlikely to derail the country's long-term trajectory. Outside Asia, risk premiums have increased in Mexico, but we think the economy remains well-supported by several tailwinds, including nearshoring, a strong manufacturing base and attractive demographics.

We are cognisant of risks, such as geopolitical conflicts worldwide, alongside potential political and policy instability following unexpected election outcomes. That said, we remain open-minded about opportunities in our investment universe and continue to dig deeper to find "forgotten" stocks with promising prospects. We believe the key to identifying future winners lies in a deep and experienced research platform with the capabilities to assess macroeconomic, ESG, and industry trends. We remain steadfast in our mission to identify businesses with self-help initiatives and distinctive growth drivers as we seek to add value for our shareholders.

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

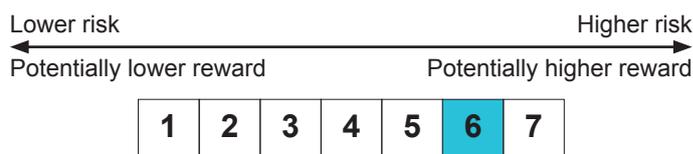

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately high.

The SRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

T. Rowe Price Funds OEIC Future of Finance Equity Fund

FUND INFORMATION

Investment objective

To increase the value of its shares, through growth in the value of its investments over the long term (a minimum of 5 years).

Investment policy

The fund is actively managed and invests at least 80% of total assets in a portfolio of shares and related equity securities issued by companies that create or use innovative financial technologies in products, services and/or their business operations. The universe encompasses companies operating in categories, including, but not limited to, capital markets, e-commerce, embedded finance, enterprise software, financial IT services, information services, payment and processors and tech-enabled financials. The companies may be anywhere in the world, including emerging markets (up to 30% of the total assets of the fund).

Types of securities the fund may invest in may include common shares, preferred shares, warrants (up to 5% of the total assets of the fund), American Depositary Receipts (ADRs), Chinese Depositary Receipts (CDRs), European Depositary Receipts (EDRs) and Global Depositary Receipts (GDRs). Investments in China may include A and H shares. Investments in China A shares may be made through the Shanghai- Hong Kong Stock Connect or the Shenzhen-Hong Kong Stock Connect programs.

The fund may also invest up to 20% of its assets in debt and money market securities.

The fund's investment approach is to invest in securities that demonstrate attractive investment attributes and to apply the following screening steps:

Exclusionary screening

The investment manager screens potential investments by excluding companies whose business activities involve controversial weapons (cluster munitions, anti-personnel mines, incendiary, biological, chemical and nuclear weapons), tobacco production, coal production, assault-style weapons for civilian use, adult entertainment and gambling. The fund also excludes companies that do not meet the investment manager's conduct-based criteria, which typically means companies

that have been involved in an extreme environmental, social, ethical or governance breach and the investment manager does not believe that they are taking adequate steps to remediate the issue. Further details of the Responsible Exclusion List Policy can be found on <https://www.troweprice.com/content/dam/trowecorp/Pdfs/esg/exclusion-policy.pdf>

Inclusionary screening by investing at least 10% of the value of its portfolio in sustainable investments. The following three tests must be met for an investment to be considered sustainable:

1. The investment must be in an economic activity that contributes to an environmental or social (sustainable) objective as measured through revenues, use of proceeds, capex or opex;
2. The investment does not cause significant harm to any other environmental or social objective; and
3. The investee company exhibits good governance practices.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management. The use of derivatives is expected to be limited.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Identify companies that enable, create or use innovative financial technologies in products, services and/or business operations.
- Utilise a proprietary global research platform using fundamental analysis to select companies with sound fundamentals and growth prospects.
- First apply a socially responsible screen and then assess environmental, social and governance ("ESG") factors with particular focus on those considered most likely to have a material impact on the performance of the holdings or potential holdings in the funds' portfolio. These ESG factors, which are incorporated into the investment process

T. Rowe Price Funds OEIC Future of Finance Equity Fund continued

alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis. Further information on the ESG investment policies can be found on <https://www.troweprice.com/corporate/uk/en/what-we-do/esg-approach/esg-investing.html>

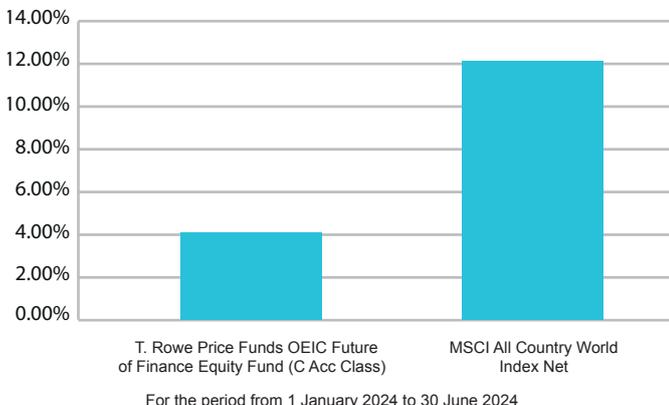

- Investing at least 10% of the value of its portfolio in sustainable investments.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Future of Finance Equity Fund recorded an absolute gain but underperformed the MSCI All Country World Index Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

Global stock markets rose in the first half of 2024. In the US, large- and mega-cap shares strongly outperformed. Although inflation remained somewhat elevated and the US Federal Reserve (Fed) kept short-term interest rates steady, the equity market was boosted by generally favourable corporate earnings and solid investor interest in companies expected to benefit from artificial intelligence (AI) developments.

- Stock selection in the information technology (IT) sector detracted substantially from relative performance. For example, shares of Endava, an IT services company focused on digital transformation

consulting, fell after the firm lowered its fiscal year outlook. Also, our lack of exposure to semiconductor stocks and mega-cap platform companies that did well hurt relative results. Such companies are not part of our investment mandate.

- Our stock choices in the industrials and business services sector also dragged. This included Dayforce, a global human capital management company with a leading technology platform and strong positions in the mid-market and enterprise segments of the industry. Its shares fell due to industrywide concerns affecting software companies stemming primarily from potentially weakening demand and decreased spending. Two of our holdings that produced favourable absolute returns, however, were Experian, which provides credit data and analytical tools to help companies manage risk and assist in decision making; and Verisk Analytics, a data/analysis company that receives fees for data and processing primarily from insurance companies.
- Our stock picks in the financials sector were another area of relative weakness. Our large stakes in payment services and transaction processing giants Visa and Mastercard produced modest gains but underperformed the sector. Corpay, a global provider of specialised payment products and commercial payment solutions, weighed further. The company is primarily a fuel card issuer but also has other payment businesses, including domestic and cross-border B2B payments, lodging, and gift cards. Its shares declined as investors were discouraged by decelerating growth in Corpay's lodging business, as well as management's lower financial guidance.
- On the plus side, we did own several financials companies, which registered strong absolute returns. These included Nu Holdings, one of the world's largest digital banking platforms, with a significant presence in Brazil and, to a lesser degree, Mexico and Colombia; Robinhood Markets, which offers brokerage services, facilitates cryptocurrency trades, and operates credit and debit card businesses; and Toast, the leading provider of cloud-based point-of-sale systems and payment processing for the restaurant industry in the US.

How is the fund positioned?

The fund invests at least 80% of assets in companies that create or use innovative financial technologies in

T. Rowe Price Funds OEIC Future of Finance Equity Fund continued

products, services and/or their business operations. The universe includes, but is not limited to, capital markets, e-commerce, embedded finance, enterprise software, financial IT services, information services, payment and processors and technology-enabled financials.

- We hold a relatively small number of companies — approximately 100 as of 30 June, with a heavy concentration in three sectors — whereas our MSCI benchmark has much broader country and sector diversification and a larger number of holdings. Therefore, our performance could vary considerably from that of the benchmark.
- Also, our overall market capitalisation is smaller than that of its peers because we believe there are greater long-term fintech investment opportunities among smaller companies, and a greater likelihood of mis-pricings that we can exploit. We aim to have about 40% to 65% of assets in such stocks. Unfortunately, stocks of smaller companies underperformed in the last six months, which weighed on the portfolio's results.
- As of 30 June, the portfolio had almost 59% of assets in the financials sector, with Visa (6%) and Mastercard (5%) our two largest positions by a considerable margin. We have allocations to banks and other financial services providers that we believe will apply new technologies to their business operations in order to offer a wider array of services, increase efficiency, and replace legacy infrastructure. We have high conviction in Fiserv, a large, diversified provider of payments and financial services technology solutions.
- Our IT sector allocation exceeded 13% of assets; most holdings were software or IT services firms. The former should benefit from non-financial companies increasingly relying on software with embedded payroll, payment, and banking features; the latter from an ongoing transition toward digital payments. A top holding and a strong first-half performer in the sector was Fair Isaac, which provides companies with analytic, software, and data management products and services that enable customers to make critical business decisions.
- In other sectors, such as industrials and business services (15% of assets), we seek companies that leverage fintech to improve their core businesses. A top holding was FTI Consulting, which provides consulting services for businesses seeking to restructure.

Top 10 issuers as at 30 June 2024

Issuer	Sector	% of Net Assets
Visa, Inc. 'A'	Financials	5.92
Mastercard, Inc. 'A'	Financials	4.98
FTI Consulting, Inc.	Industrials	4.04
Fiserv, Inc.	Financials	4.04
Tradeweb Markets, Inc. 'A'	Financials	3.94
London Stock Exchange Group plc	Financials	3.29
NU Holdings Ltd. 'A'	Financials	2.96
Robinhood Markets, Inc. 'A'	Financials	2.91
Toast, Inc. 'A'	Financials	2.25
Tencent Holdings Ltd.	Communication Services	1.92

What is portfolio management's outlook?

As we begin the second half of 2024, there are modest expectations for the Fed to begin reducing short-term rates by the end of the year. Economic data have been mixed, if not conflicting: the labour market is showing signs of cooling, yet inflation remains stubbornly above the central bank's 2% target.

As a reminder, macroeconomic views do not drive our investment decisions; instead, we use fundamental research to identify fintech companies with low operational risk and solid business models that we believe will enable them to generate higher returns and consume less capital than their peers. We still believe that stock selection is the key to long-term outperformance. Over time, we anticipate that there will be a relatively small number of winners in the fintech space, so we seek to concentrate our positions in our analysts' best ideas. The ongoing AI boom continues to have a dramatic impact on technology companies; in response, we look for companies that have deep proprietary data and network effects that we believe could capture the value of AI.

While many investors are eagerly waiting for the Fed to start cutting interest rates, we doubt that rates will return to ultra-low levels. Therefore, we continue to believe that fundamentally strong companies, such as legacy IT services companies that facilitate electronic payments, will be able to take market share from newer competitors with weaker business models that rely on access to easy or cheap capital. Among smaller and newer entrants into the fintech universe, we look for those with compelling unit economics, value propositions, and the potential to increase market share over time.

C Acc shares: The share class was launched on 18 October 2022.

C Acc 9 shares: The share class was launched on 18 October 2022.

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately high.

The SRRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

T. Rowe Price Funds OEIC Global Focused Growth Equity Fund

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a diversified portfolio of shares which, in the opinion of the investment manager, have the potential for above average and sustainable rates of earnings growth. The companies may be anywhere in the world, including emerging markets.

Specifically, the fund invests at least 70% of total assets in shares and related securities of listed companies. Types of securities may include common stocks, preferred stocks, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund does not invest more than 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Identify “best ideas” by assessing companies in a global sector context, using a bottom-up approach to create a focused portfolio of typically 60-80 holdings.
- Utilise a proprietary global research platform using fundamental analysis to identify companies with superior and sustainable growth prospects, and improving fundamentals.
- Integrate macroeconomic and local market factors in stock selection decisions.

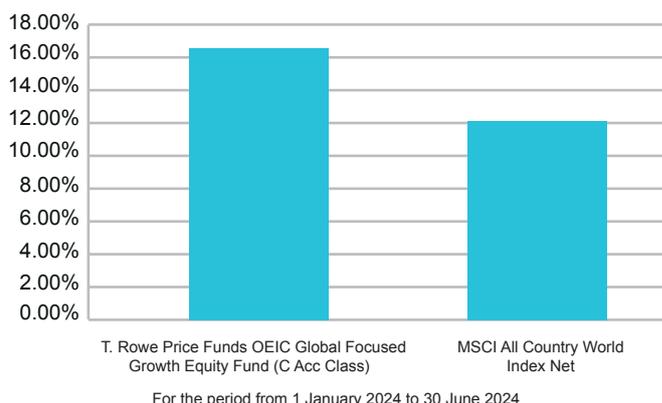

- Measure valuation appeal against the local market and broad sector opportunity set.
- Invest in a broad range of stocks across all capitalisations, incorporating developed and emerging markets.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund's portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Global Focused Growth Equity Fund recorded a strong absolute gain and outperformed the MSCI All Country World Index Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

In British pound terms, global equities produced solid returns for the six-month period, which could be characterised as a tale of two quarters. The first quarter of 2024 was defined by broad-based optimism that major central banks were on track to deliver a number of interest rate cuts, artificial intelligence (AI)-driven

T. Rowe Price Funds OEIC Global Focused Growth Equity Fund continued

exuberance and solid corporate earnings results. However, the second quarter saw choppy markets as investors worried about several geopolitical risks and the prospects for a reduced number of interest rate cuts, if any at all, by central banks.

The fund outperformed its benchmark, thanks to positive stock selection, while sector allocation was also advantageous. Our exposure to two dynamic and accelerating current market themes — AI and GLP-1 weight loss drugs — helped us outperform. We also think being disciplined about valuations and our investment framework — looking for companies with improving fundamentals that can drive return on capital — was key.

- Our holdings in the information technology (IT) sector, coupled with an overweight position, contributed the most to relative returns. Shares of NVIDIA moved higher as the company continued to deliver a series of consensus-beating results. We believe NVIDIA remains well positioned as a leading beneficiary of the ongoing infrastructure buildout to support AI functionality. That being said, we moderated our position later in the period in order to manage risk given the stock's incredibly strong performance over the last year.
- Stock selection in health care also aided relative returns. Shares of pharmaceutical firm Eli Lilly continued to benefit from broader optimism surrounding GLP-1 drugs as well as a slew of bullish data points, including positive developments related to the firm's oral GLP-1 drug in development and messaging from management about overall capacity improvements. We continue to have high conviction in Eli Lilly and believe it will see meaningful acceleration in growth as GLP-1 adoption increases and additional clinical catalysts further expand the GLP-1 addressable market.
- Our holdings in the utilities sector boosted relative performance further. Shares of Constellation Energy, the largest producer of carbon-free energy in the US, gained ground on a series of strong earnings results as well as anticipation for increased energy demand in the face of robust AI and other technology-related infrastructure buildout. We continue to think the company is well positioned to benefit from a tightening power supply and demand dynamic resulting from data centre growth, reshoring, home electrification and increased electric vehicle adoption.
- Conversely, stock selection in financials hurt relative results. London Stock Exchange was hampered by a series of muted earnings results as the company struggled with a difficult macroeconomic backdrop, higher-than-expected costs and foreign exchange headwinds. We continue to believe the firm's strategy to focus on data, clearing and fixed income trading puts it firmly on the right side of change in financial markets.

How is the fund positioned?

We are starting to become more cautious about the outsized gains of AI-related market segments and think we are seeing fuller valuations as well as the beginning of the end of the AI infrastructure cycle, which means we could begin to see some slowing growth or potential deceleration from here. In this type of environment, we think it is important to try and maintain balance in the portfolio so as not to take on too much risk.

- Sector-wise, we are most overweight IT relative to the benchmark. More recently, we have been repositioning our holdings within the space to prioritise names with more attractive valuations that should see accelerating return on capital in the coming quarters. For instance, we eliminated ServiceNow, Fortinet, Datadog and Autodesk, as we think there is some risk to software names as companies reallocate spending to AI-related upgrades. We moved funds to higher-conviction technology names, adding new positions in Corning and Celestica, companies that we believe stand to benefit from AI demand but that are more under the radar, and increasing our positions in Apple, which offers some defensiveness but is also poised to accelerate heading into next year, and semiconductor chipmaker SK Hynix.
- We are also meaningfully overweight health care versus the benchmark. We found that a lot of names within the sector fit our framework, which is focused on improving returns. In general, our exposure within the sector is idiosyncratic and targeted at companies with unique innovation- or product-driven tailwinds. We added to our position in Denmark-based biopharmaceutical company Novo Nordisk, which produces three of the most well-known and in-demand GLP-1 drugs: Ozempic, Rybelsus and Wegovy.

T. Rowe Price Funds OEIC Global Focused Growth Equity Fund continued

- In contrast, we significantly reduced our exposure to the consumer discretionary sector and are now underweight positioned versus the benchmark. We think the current macroeconomic environment is a significant headwind to many traditional consumer discretionary growth names. Over the period, we reduced our position in Amazon.com on strength as the stock has rallied on solid earnings results. We also eliminated our position in child-care provider Bright Horizons Family Services as the stock has not seen the accelerating returns catalysts we anticipated would occur when we initially invested.

while providing a level of insurance for the portfolio if the current cycle turns; and emerging market banks that fit our investment framework and should help moderate the portfolio's overall risk profile, all while trading at what we believe are attractive valuations.

We recognise that the world has changed. Cheap capital and cheap labour are gone, and we are moving further away from the efficient frontier. Fortunately, our flexible investment framework was designed to embrace change, and we believe our focus on identifying and investing in high-quality companies where we have insights about their improving economic returns in the future, and we don't pay too much, will continue to add value for our clients.

Top 10 issuers as at 30 June 2024

Issuer	Sector	% of Net Assets
Apple, Inc.	Information Technology	6.01

London Stock Exchange Group plc	Financials	2.77
Taiwan Semiconductor Manufacturing Co. Ltd.	Information Technology	2.64
ConocoPhillips	Energy	2.58

What is portfolio management's outlook?

We remain focused on uncovering insights into improving economic returns and are finding idiosyncratic investment opportunities across a wide spectrum of companies. Within the portfolio, we continue to maintain meaningful exposure to the AI and GLP-1 secular themes. However, we recognise that we are likely at the beginning of the end of the AI infrastructure cycle and valuations have become fuller, likely lowering future returns, at least in the near to medium term. With GLP-1s, we believe we are still very early in the adoption cycle for a class of drugs likely to become the largest in history, and we see meaningful clinical milestones in the near term that we think are underappreciated by consensus.

While we think AI and GLP-1s are powerful long-term secular trends that offer a great amount of investment potential, we are trying to navigate those trends responsibly and also balance out the portfolio to better manage our capture ratio. We are doing this through positions in areas such as energy, where productivity appears to be peaking and macroeconomic trends have the potential to boost future demand; consumer staples, which are broadly trading at what we view as extreme relative valuations and should act more defensively

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately volatile.

The SRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRI score is based on the highest score among all classes of the fund.

Lower risk ← → Higher risk
Potentially lower reward Potentially higher reward

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

FUND INFORMATION

Investment objective

To maximise the value of its shares through both growth in the value of, and income from, its investments over a full market cycle (a minimum of 5 years).

Investment policy

The fund is actively managed and invests at least 80% of total assets in a portfolio of high yield (non-investment grade) corporate bonds that have the potential for consistent growth. The high yield corporate bonds will be from issuers around the world, including emerging markets (up to 40% of the total assets of the fund).

Debt securities can include fixed and floating rate bonds, warrants and other transferable debt securities of any type. The debt securities are rated by Standard & Poor's or an alternative credit rating agency. Where the securities are unrated, the investment manager will ensure they are of a similar quality in accordance with its in-house rating. The fund may also invest up to 25% in convertible bonds (including up to 15% in contingent convertible bonds).

The fund aims to hedge any non-Sterling assets to Sterling.

The fund may also invest up to 20% of its assets in other transferable securities (including government bonds, deposits, preferred shared and equity related securities).

The fund's investment approach is to invest in securities that demonstrate attractive investment attributes and to apply the following screening steps:

Exclusionary screening

The investment manager screens potential investments by excluding companies whose business activities involve controversial weapons (cluster munitions, anti-personnel mines, incendiary, biological, chemical and nuclear weapons), tobacco production, coal production, assault-style weapons for civilian use, adult entertainment and gambling. The fund also excludes companies that do not meet the investment manager's conduct-based criteria, which typically means companies that have been involved in an extreme environmental, social, ethical or

governance breach and the investment manager does not believe that they are taking adequate steps to remediate the issue. Further details of the Responsible Exclusion List Policy can be found on <https://www.troweprice.com/content/dam/trowecorp/Pdfs/esg/exclusion-policy.pdf>

Inclusionary screening

Inclusionary screening by investing at least 10% of the value of its portfolio in sustainable investments. The following three tests must be met for an investment to be considered sustainable:

1. The investment must be in an economic activity that contributes to an environmental or social (sustainable) objective as measured through revenues, use of proceeds, capex or opex;
2. The investment does not cause significant harm to any other environmental or social objective; and
3. The investee company exhibits good governance practices.

Derivatives and techniques

The fund may use derivatives for hedging, efficient portfolio management and investment purposes. The fund may also use derivatives to create synthetic short positions in debt securities and credit indices. The use of derivatives for investment purposes is expected to be limited.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Use proprietary fundamental research and relative value analysis.
- Seek out opportunities where they exist in the market, and identify "best ideas" by assessing issuers in a global context.
- Place a strong emphasis on risk management practices and portfolio diversification to manage the overall risk profile.

T. Rowe Price Funds OEIC Global High Yield Opportunities Bond Fund continued

- First apply a socially responsible screen and then assess environmental, social and governance (“ESG”) factors with particular focus on those considered most likely to have a material impact on the performance of the holdings or potential holdings in the funds’ portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis. Further information on the ESG investment policies can be found on <https://www.troweprice.com/corporate/uk/en/what-we-do/esg-approach/esg-investing.html>
- Investing at least 10% of the value of its portfolio in sustainable investments.

projections in June showed a median forecast for only one rate cut in 2024, down from the three reductions expected in March. As it had telegraphed, the European Central Bank lowered the main refinancing operations rate by 25 basis points to 4.25% in June. The policy statement provided no pre-commitment to a specific rate path, however, giving the central bank flexibility going forward. Turning to the UK, the Bank of England maintained its key bank rate at 5.25%, although two policymakers favoured a cut. Officials said the decision was “finely balanced,” and the meeting minutes hinted that policy easing could occur soon.

Within the portfolio, the combination of active credit positions and avoiding troubled issuers added value during the review period. Our holdings in the energy industry, as well as credit selection in the other telecommunications and services segments contributed to relative results. Conversely, security selection and our overweight allocation among cable operators detracted. Our overweight exposure and, to a lesser extent, security selection in the media segment dragged.

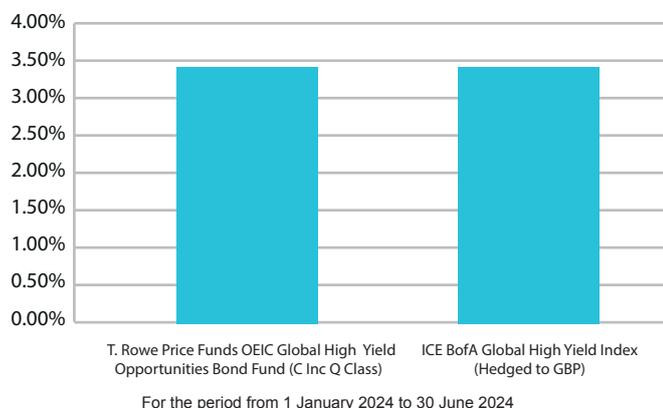

- Venture Global, a low-cost provider of American liquified natural gas (LNG), added value in the energy industry. The company is developing multiple LNG export facilities in Louisiana using modular, mid-scale liquefaction technology, enabling significantly lower cost of development and shorter development timelines. With its demonstrated track record of contracting and executing construction of large-scale projects that are backed by long-term contracts with solid customers, Venture Global will likely migrate to investment-grade status as it matures.
- Globo, the largest media group in Brazil, was a notable contributor in the other telecommunications segment. The company’s fiscal year 2023 results revealed earnings before interest, taxes, depreciation and amortisation (EBITDA) margin above its pre-pandemic 2019 level. The company’s thoughtful transformation from a traditional linear TV business to an over-the-top (OTT) media provider via Globoplay, a subscription video-on-demand streaming service, and digital advertising is well under way. New sources of revenue now contribute ~20% to total revenue, and this is expected to grow toward 40% by 2027/28.
- The portfolio’s holdings of Altice France held back relative gains in the cable operators segment. The change in strategy announced by the company’s

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Global High Yield Opportunities Bond Fund recorded an absolute gain and performed in line with the ICE BofA Global High Yield Index in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund’s performance?

In the US, easing inflationary pressures fuelled expectations that the Federal Reserve (Fed) remained on course to begin cutting interest rates in the second half of this year. Still, policymakers’ updated economic

T. Rowe Price Funds OEIC Global High Yield Opportunities Bond Fund continued

management in March to further reduce leverage by forcing bondholders to accept a reduction to their claims led to a significant negative price development, particularly within the unsecured bonds. Given our overweight position in the name, this had a meaningful negative impact on performance.

- Within the media industry, iHeartMedia, the largest audio company in the US based on consumer reach, was a notable detractor. The company's first-quarter results met guidance and consensus expectations. However, the second-quarter outlook was disappointing, which caused the capital structure to trade off. Revenue was guided flat and EBITDA was expected to decline roughly 22% year over year at the midpoint. Despite this, management remained bullish on the performance tailwind from political spend in the year's second half.

How is the fund positioned?

We maintained our overweight allocation to Europe versus the benchmark, as it is a better-rated market with a yield pickup compared with the US. We also increased our overweight position in emerging markets, with the majority of our exposure, particularly in the financials and energy industries, based in Latin America rather than Asia.

- We continued to find better opportunities among B rated names and remained overweight this rating tier while maintaining an underweight exposure to BBs.
- Despite the volatility and negative developments, we maintain our position in Altice and continue to monitor the situation closely. We believe a holistic solution is available that can recover bonds at prices higher than currently marked. In other non-cyclical sectors, we significantly reduced our holdings in the services segment on an idiosyncratic basis due to the diversity of the sector.
- We maintained our overweight position in the entertainment and leisure segment, particularly among issuers that operate gyms, cruise lines, and theme parks, as consumers have continued to show a preference for spending on activities rather than goods. For example, we have an overweight position in global cruise company Carnival Corporation, which recently reported solid second-quarter results with revenue increasing ~18% year over year, driven by positive trends in onboard spending. We also

increased our underweight allocation to the utilities industry.

Top 10 issuers as at 30 June 2024

Cloud Software Group, Inc. 6.50% 31/03/2029	Corporate Bonds	0.93
CEC Entertainment LLC 6.75% 01/05/2026	Corporate Bonds	0.92

What is portfolio management's outlook?

Volatility has somewhat subsided since the end of March. Positive fundamentals combined with favourable technical conditions and valuations remain supportive for the below investment-grade market as a whole, as does the promise of falling interest rates later this year.

Although benchmark yields have moderated to the range of 7.5% to 8.0% from the highs of around 9% at the end of October, they remain attractive relative to the yields seen during a longer period of recent history. Since 2013, yields have only been above 7.5% during the current inflation-driven cycle, the 2020 coronavirus pandemic sell-off, and the early 2016 commodity price crash.

High yield issuers' fundamentals remain strong, in our view, despite some measures normalising from historical highs. Although companies will be issuing new debt at higher rates this year, many will do so in a laddered manner with only a portion of their debt maturing over the next two years, while likely benefitting from falling interest rates in late 2024 and 2025.

C Inc Q shares: The share class was launched on 27 October 2022.

C Inc Q 9 shares: The share class was launched on 27 October 2022.

T Acc shares: The share class was launched on 10 May 2023 and closed on 26 January 2024.

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

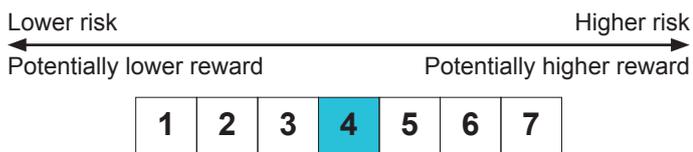

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market that is moderately volatile.

The SRRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

Group 2 Shares purchased on or after 1 January 2024

	Net revenue p per share	Equalisation p per share	Distribution paid 31.05.24 p per share	Distribution paid 31.05.23 p per share
C Inc Q shares				
Group 1	22.666962	–	22.666962	21.334846
Group 2	22.666962	0.000000	22.666962	21.334846
C Inc Q 9 shares				
Group 1	22.711543	–	22.711543	21.343805
Group 2	22.711543	0.000000	22.711543	21.343805

Interim distribution for the three months ended 30 June 2024

Group 1 Shares purchased prior to 2 April 2024

Group 2 Shares purchased on or after 2 April 2024

	Net revenue p per share	Equalisation p per share	Distribution payable 30.08.24 p per share	Distribution paid 31.08.23 p per share
C Inc Q shares				
Group 1	22.225589	–	22.225589	21.065520
Group 2	22.225589	0.000000	22.225589	21.065520
C Inc Q 9 shares				
Group 1	22.277542	–	22.277542	21.083403
Group 2	22.277542	0.000000	22.277542	21.083403

Equalisation applies to shares purchased during the distribution period (Group 2 shares). It is the average amount of revenue included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital.

Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

T. Rowe Price Funds OEIC Global Impact Credit Fund

FUND INFORMATION

Investment objective

To have a positive impact on the environment and society whilst at the same time seeking to increase the value of its shares through both growth in the value of, and income from, its investments over a full market cycle (a minimum of 5 years).

Investment policy

The fund is actively managed and invests at least 70% of the total assets in a portfolio of investment grade corporate bonds from issuers around the world, including emerging markets (up to 40% of the total assets of the fund). The fund may also invest in below investment grade bonds (up to 30% of the total assets of the fund). The debt securities are rated by Standard & Poor's or an alternative credit rating agency. Where the securities are unrated, the investment manager will ensure they are of a similar quality in accordance with its in-house rating. The fund may also invest in contingent convertible bonds (up to 15% of the total assets of the fund).

The investment manager will invest in securities that it believes have the potential to create positive social or environmental impact through their issuers' products; or services; or proceeds (see below), and that appear to offer superior growth prospects and investment characteristics, as described in the Investment Strategy and Investment Approach sections below.

The fund aims to hedge any non-Sterling assets to Sterling.

The fund may also invest up to 10% of its assets in equities and related securities. Any investment in equities and related securities aims to be consistent with the fund's objective.

Derivatives and techniques

The fund may use derivatives for hedging, efficient portfolio management and investment purposes. Any use of derivatives aims to be consistent with the fund's objective.

Investment strategy

The fund's investment strategy is built on a belief that companies actively aiming to solve the challenges faced by our planet and our society are well placed to

generate positive real-world impact. In addition, where the provision of a service or product creating a positive impact is scarce and differentiated, the investment manager believes this creates the potential for a company to deliver superior economic returns, driven by the durability and persistence of earnings and cashflow.

While many of the world's challenges are urgent and require action in the present, successful impact investing is inherently linked to the duration and persistence of positive change. Impact investing requires conscious action, skilled execution and the commitment of engagement with companies. These principles are all embedded in the investment approach of the fund.

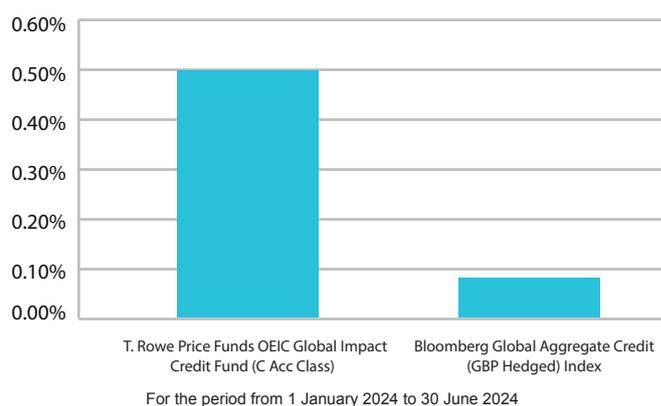

Please see the Prospectus for full details on the Objective, Investment Policy, Strategy and Approach.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Global Impact Credit Fund recorded an absolute gain and outperformed its benchmark, the Bloomberg Global Aggregate Credit (GBP Hedged) Index, in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

Global credit markets recorded modest positive total returns in the first six months of this year supported by coupon income as government yields rose, but spreads narrowed slightly. Markets fluctuated as resilient economic data and sticky inflation in the US led investors to reduce their expectations for interest rate cuts in 2024.

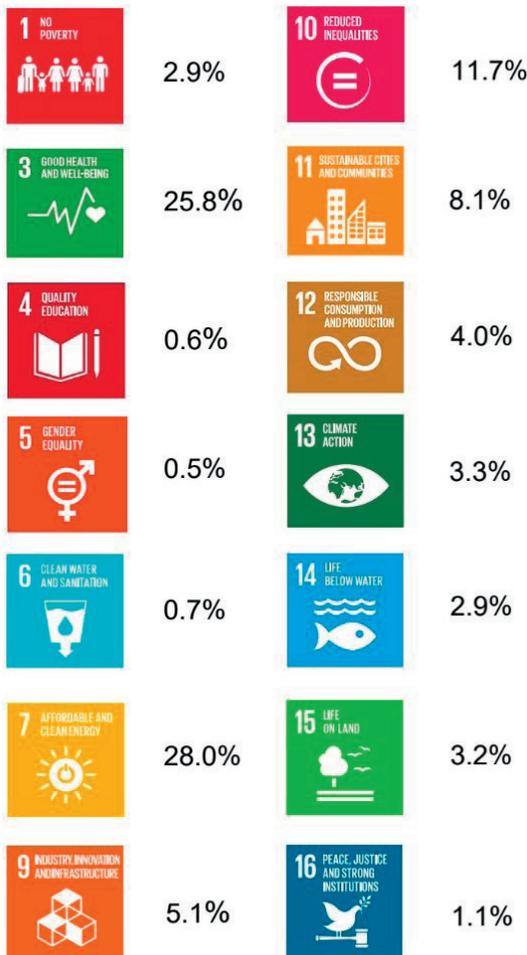

T. Rowe Price Funds OEIC Global Impact Credit Fund continued

- The fund's security selection was the main positive over the period, particularly in the banking sector as our positions in Central and Eastern Europe, South America and Asia helped performance.
- Our choice of securities was also effective in electric utilities, namely in renewable power companies, and in the consumer noncyclical sector, where our positions in hospitals and individual health care names added value.
- In contrast, security selection in the insurance sector detracted, as individual holdings in US-based health care insurance providers underperformed.

How is the fund positioned?

Our investment approach is aligned, but not anchored, to the United Nations Sustainable Development Goals (SDGs).

UN SDG ALIGNMENT

Percentage of the fund aligned with the UN SDGs, as of 30 June 2024.

We evaluate impact across our three proprietary impact pillars and eight sub-pillars that encompass: (1) Climate and Resource Impact, (2) Social Equity and Quality of Life and (3) Sustainable Innovation and Productivity.

- We remain heavily weighted towards the Climate and Resource (53%) and Social Equity and Quality of Life (45%) impact pillars. We envision this bias will continue as our holdings here offer the highest degree of direct, positive impact. Our SDG alignment continues to favour #7 (Affordable and Clean Energy) and #3 (Good Health and Well-Being).
- The overwhelming majority of our holdings within the Climate and Resource segment are under our Reducing Greenhouse Gases sub-pillar, including companies such as Carrier Global and TenneT. We hold smaller allocations to our other climate-focused sub-pillars, which are Nurturing Circular Economies and Promoting Healthy Ecosystems.
- Within the Social Equity and Quality of Life pillar, we have three sub-pillars, with the Improving Health subsegment boasting the majority of our positions. We seek companies within the health care ecosystem that are improving the pace of innovation, increasing access to low-cost health care, or meaningfully changing patient outcomes, including not-for-profit pediatric hospitals and companies contributing to the acceleration and improvement of health care provision, including for underserved communities. We have a slightly smaller presence in the Enabling Social Equity sub-pillar, which encompasses companies that enable access to education, consumption at the bottom of the pyramid and financial inclusion — within both emerging and developed markets. Examples include financial service providers that are improving financial inclusion among developed market consumers, such as Spain's Caixabank.
- We realigned our exposure to the Sustainable Innovation and Productivity pillar, meaning we now have 0% alignment here. This pillar, which is set up to catch more of the enablers of impact (for example, green semiconductors), will naturally always be lower than the first two pillars, which have a higher degree of direct impact.
- Around 57% of the portfolio is held in environmental, social and governance (ESG) or sustainability use-of-proceeds bonds, which fund discrete and targeted environmental and social projects. Meanwhile, 41% of the portfolio pertains to high-impact, non-labelled bonds.

T. Rowe Price Funds OEIC Global Impact Credit Fund continued

- Global Impact Credit is a relatively low-turnover strategy as impact outcomes take time to capture, necessitating patience. Some new purchases in the period were somewhat idiosyncratic, including the World Bank Plastic Waste Reduction-Linked Bond and Chile's social bond.
- We added positions in utilities ESG-labelled bonds, including selective purchases in UK-based water companies following an in-depth sector analysis. We bought power utility bonds in Italy, France and Belgium which align to our reducing greenhouse gases sub-pillar, and we continued to selectively invest in ESG-labelled bonds across sectors and continued to find opportunities in emerging market credit.
- Overall, we remained focused on compelling impact, fundamental and relative value opportunities across health care and utilities, which offer defensive attributes, and more growth-oriented companies in areas like US real estate.
- The portfolio ended the period with an overall yield over 100 basis points higher than the aggregate index yield. We continue to favour BBB and BB credit over higher-quality ratings and see better return potential in intermediate- and short-dated maturity bonds than in the long end.
- We provide details of impact delivered on an annual basis. Our second (2022) Global Impact Credit Strategy annual report articulates our impact journey and the decisions we have taken in the context of our core investment principles. Specifically, it aims to share with you the impact that those decisions have made on our environment and society. The report can be found on our website https://www.troweprice.com/content/dam/gdx/pdfs/Global_Impact_Credit_Strategy_Annual_Report_2022.PDF

What is portfolio management's outlook?

We hold a positive outlook for near-term global growth, and while some reflation concerns do persist, we expect disinflation to resume its bumpy path downward. We think investors' expectations for US interest rate cuts remain somewhat elevated, however, although more realistic than in the beginning of the second quarter.

In Europe, we see economic activity data improving in the near term, with recent softness likely due to political events weighing on confidence. The outlook for China remains negative, particularly given underwhelming intervention from the authorities.

In credit, tight US spreads do limit upside potential in parts of the market, but we do not see a catalyst for a sell-off given the economy remains resilient and the Federal Reserve is looking to ease policy. Liquidity might be one area of concern. Banks are broadly in a stronger fundamental position than a year ago, but reserves are low, and with heavy Treasury issuance that dealers need to absorb, liquidity conditions could be challenged.

Overall, while the macroeconomic environment is notably varied, with the potential for political uncertainty to affect sentiment, the key factor for credit is that the growth backdrop remains supportive, as do corporate fundamentals, on the whole. The potential for further volatility could play well for active managers particularly in view of existing dispersions across yield curves, currencies and sectors.

We would expect to continue to find opportunities to generate efficient income return and add value through sector and security selection. Concurrently, attractive all-in yields represent a meaningful technical tailwind to the market, sustaining ample levels of demand for corporate bonds.

C Acc 9 shares: The share class was launched on 14 December 2021.

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

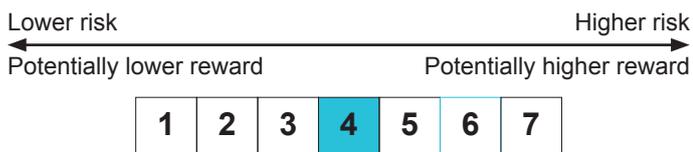

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately volatile.

The SRRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

FUND INFORMATION

Investment objective

To have a positive impact on the environment and society whilst at the same time seeking to increase the value of its shares through growth in the value of its investments over the long term (a minimum of 5 years).

Investment policy

The fund is actively managed and invests in a portfolio of shares of companies which may be anywhere in the world, including emerging markets (up to 35% of the total assets of the fund). The investment manager will focus on companies that it believes have the potential to create positive social or environmental impact through their products or services, and that appear to offer superior growth prospects and investment characteristics, as described in the Investment Strategy and Investment Approach sections below.

The fund invests at least 80% of the total assets in shares and related securities of listed companies. Types of securities may include common shares, preferred shares, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs). Investments in China may include A and H shares. Investments in China A shares may be made through the Shanghai-Hong Kong Stock Connect or the Shenzhen-Hong Kong Stock Connect programs.

The fund may also invest up to 20% of its assets in debt and money market securities. Any investment in debt and money market securities aims to be consistent with the fund's objective.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management. The use of derivatives is expected to be limited. Any use of derivatives aims to be consistent with the fund's objective.

Investment strategy

The fund's investment strategy is built on a belief that companies actively aiming to solve the challenges faced by our planet and our society are well placed to generate positive real-world impact. In addition, where the provision of a service or product creating a positive

impact is scarce and differentiated, the investment manager believes this creates the potential for a company to deliver superior economic returns, driven by the durability and persistence of earnings and cashflow growth.

While many of the world's challenges are urgent and require action in the present, successful impact investing is inherently linked to the duration and persistence of positive change. Impact investing requires conscious action, skilled execution and the commitment of engagement with companies. These principles are all embedded in our investment approach.

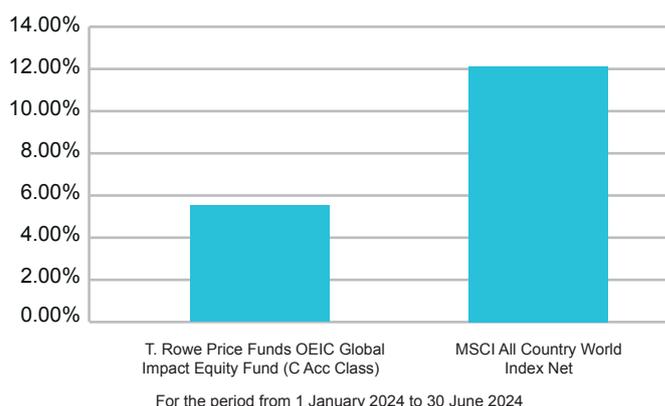

Please see the Prospectus for full details on the Objective, Investment Policy, Strategy and Approach.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Global Impact Equity Fund recorded an absolute gain but underperformed the MSCI All Country World Index Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

For much of the period, global equity market leadership was concentrated in a relatively small number of leading US technology companies (the Magnificent Seven), which we avoid because their activities do not align with our impact framework. Stock selection within information technology (IT) was therefore the biggest drag on the fund's relative performance.

T. Rowe Price Funds OEIC Global Impact Equity Fund continued

- Among the IT stocks we hold, SolarEdge Technologies, an energy technology company that sells inverters, optimisers and batteries primarily for the residential and commercial solar markets, was a notable detractor. Its shares fell as confidence in a revenue and margin recovery diminished due to inventory overhang and the departure of the chief financial officer. We retain our position as we anticipate that results are likely to stabilise over the coming quarters.
- Our choice of securities in financials was also unfavourable. The sluggish share price performance of AIA, a leading life insurer helping to narrow the protection gap in Southeast Asia, reflected concerns about the Chinese economy. The company's growth is inevitably hampered by prolonged economic recovery after COVID-19 and a depressed property market. However, we remain confident about the resilience of AIA's growth, supported by an excess capital position and a strong management team.
- Conversely, Eli Lilly, whose product portfolio generates positive impact by helping consumers manage diabetes and address obesity, was the top contributor to relative returns. Demand for GLP-1 weight loss drugs remained robust and drove a raise in fiscal year 2024 revenue guidance.
- ASML Holding also boosted relative performance. The company creates impact through its lithography equipment, which is responsible for a critical step in semiconductor manufacturing and enables downstream semiconductor innovation. Its shares climbed after news at the end of the period that Taiwan's TSMC would be ordering high-numerical aperture extreme ultraviolet machines to ramp up production of a new generation of processor chips.

How is the fund positioned?

Our investment approach is aligned, but not anchored, to the United Nations Sustainable Development Goals (UN SDGs).

UN SDG ALIGNMENT

Percentage of the fund aligned with the UN SDGs, as of 30 June 2024.

We evaluate impact across our three proprietary impact pillars and eight sub-pillars that encompass: (1) Climate and Resource Impact, (2) Social Equity and Quality of Life and (3) Sustainable Innovation and Productivity.

- At the end of June, the Social Equity and Quality of Life pillar made up 53.7% of the fund and includes companies that are promoting and enabling improved health and well-being and enabling social equality, education and financial inclusion. The Climate and Resource Impact pillar comprised 38.6% of the fund and is focused on companies that are producing renewable energy, promoting circular economies and reduced waste and contributing to energy efficiency and decarbonisation. The Sustainable Innovation and Productivity pillar was 4.8% of the fund and includes companies that are enabling technological solutions to social and environmental issues, like semiconductor equipment companies that improve the energy efficiency of digital products or are engaged in constructing smart cities or other innovative infrastructure development.
- Given the continuous lack of breadth in the market, we continued to focus on building a portfolio that balances risk management and opportunistic

T. Rowe Price Funds OEIC Global Impact Equity Fund continued

action. We added to companies with attractive earnings outlooks and sold those with deteriorating fundamentals.

- We started a position in Bank Rakyat. As the largest microlender in Indonesia, it enables the ability to mobilise capital to close the financial inclusion gap, reduce financial inequalities and enable economic growth. We believe this state-owned enterprise will benefit from the improving macroeconomic environment in Indonesia. We also initiated a position in Vertiv. Vertiv's power and cooling solutions enable data centres and telecommunications networks to reduce their carbon footprint. As a leading artificial intelligence (AI) infrastructure player with sustainable competitive differentiation in data centre power and thermal management, we believe that the firm is well positioned for growth and wallet share gains as computer density increases.
- We eliminated TSMC on impact measurability grounds. We sold our holding in HDFC Bank as we expect a slowdown in growth and exited Darling Ingredients on a lower profit outlook.
- We provide details of impact delivered on an annual basis. Our 2022 Global Impact Equity Strategy annual report articulates our impact journey and the decisions we have taken in the context of our core investment principles. Specifically, it aims to share with you the impact that those decisions have made on our environment and society. The report can be found on our website https://www.troweprice.com/content/dam/gdx/pdfs/GlobalImpactEquityStrategy_2022AnnualReport_GL.PDF

policy pivot expectations, the market has continued to demonstrate firmer growth. On the other hand, while big tech concentration remains under scrutiny, we keep our focus on building a balanced portfolio and finding idiosyncratic stock impact opportunities that provide earnings resilience through the economic cycle.

Five impact themes we are excited about this year are:

- (1) Decarbonisation has been among the most invested environmental, social and governance (ESG) themes in a period of lower interest rates. Recently, a higher cost of capital and stock-specific issues have been challenging for the renewables sector. However, decarbonisation goes beyond renewable energy producers, and we aim to discover companies with idiosyncratic profiles such as Hubbell, which is exposed to several secular trends linked to decarbonisation (grid modernisation and electrification).
- (2) As it becomes more and more apparent that net zero targets are unlikely to be met by 2050, investors need to be pragmatic and look at climate adaptation solutions, which look at adapting to and protecting communities against the consequences of climate change. Examples include solutions that are linked to improved agricultural resilience (Deere).
- (3) GLP-1s are likely to continue to be a major theme thanks to a rapid expansion that will be driven by capacity increases, new product launches such as oral medication, improving reimbursement/access and geographic expansion. The increasing use of GLP-1s should also positively impact industries such as medical technology (Intuitive Surgical).
- (4) We believe that AI can be a positive enabler for most of the targets of the UN SDGs. Our Climate and Resource Impact pillar can benefit from AI analytical and predictive capabilities in fields such as power grid optimisation and reliability, where they can help improve agricultural and manufacturing processes. In health care, machine learning technologies can assist in drug discovery and diagnostic processes, leading to earlier detection of diseases. However, it is important to monitor and evaluate the potential risks associated with AI adoption. The significant energy demand required to run AI data centres 24 hours a day puts immense pressure on resources. Companies that help manage data centre infrastructure, including cooling solutions to help handle thermal loads (Vertiv) and power

Top 10 issuers as at 30 June 2024

What is portfolio management's outlook?

Entering the second half of 2024, we remain positive about the market and macroeconomic setup. Despite the hawkish repricing of US Federal Reserve monetary

T. Rowe Price Funds OEIC Global Impact Equity Fund continued

management systems, will become increasingly important.

- (5) As defined by the International Labour Organisation, a “just transition” means greening the economy in a way that is as fair and inclusive as possible to everyone concerned, creating decent work opportunities and leaving no one behind. We expect a greater focus on a just transition in the coming years to create investment opportunities in companies linked to our Enhancing Quality of Life sub-pillar, aligned to SDG 8 (decent work). As the transition to a net zero economy occurs, companies must recruit, re-skill and upskill employees in new technologies. Occupational safety and health in resource-heavy industries are also a core component of a just transition, and therefore we expect companies that provide worker protection, such as MSA Safety, to benefit.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately volatile.

The SRRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

T. Rowe Price Funds OEIC Global Natural Resources Equity Fund

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a widely diversified portfolio of shares of natural resources or commodities-related companies. The companies may be anywhere in the world, including emerging markets.

Specifically, the fund invests at least 70% of total assets in shares and related securities of companies that own or develop natural resources and other basic commodities, such as common stocks, preferred stocks, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund does not invest more than 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager’s approach is to:

- Focus on well-managed companies with attractive long-term supply-demand fundamentals.
- Invest in companies that operate “downstream” from these resources, such as refining, paper manufacturing, steel fabrication and petrochemicals.
- Assess resource/commodity cycles, industry valuations and company fundamentals.
- Broadly diversify holdings to manage portfolio risk profile relative to highly concentrated exposure to a single commodity.

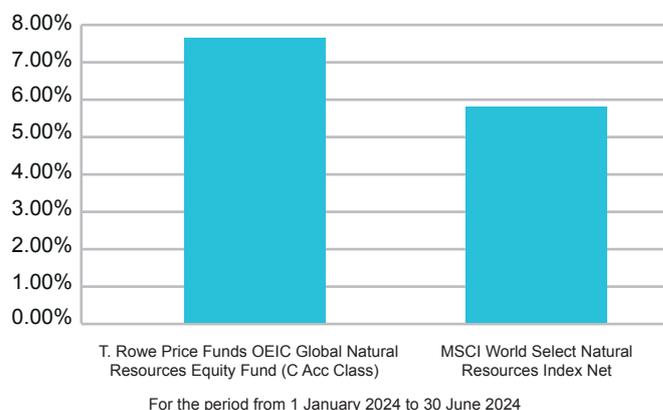

- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund’s portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Global Natural Resources Fund recorded an absolute gain and outperformed the MSCI World Natural Resources Index Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund’s performance?

Global natural resources stocks rose over the first half of the year, but the gains were kept in check by geopolitical risks and diminishing expectations for interest rate cuts in the US in 2024. Artificial intelligence (AI)-driven exuberance, positive corporate earnings results and some softening macroeconomic data outweighed negative sentiment.

T. Rowe Price Funds OEIC Global Natural Resources Equity Fund

continued

The portfolio outperformed during the period largely due to favourable stock picks. We continue to invest from the bottom up through the lens of our secular view on productivity in the commodities space, with a focus on companies that are high quality, are high conviction and/or have idiosyncratic drivers.

- Stock selection within diversified metals and mining benefitted relative returns. Copper prices reached highs as the fallout from production issues in late 2023 materialised, causing supply to tighten, as evidenced by Chinese smelters announcing a cut in production due to a lack of copper concentrate supply. Shares of Freeport-McMoRan, the world's largest pure-play copper mine, and Southern Copper, a copper producer in Mexico and Peru, advanced during the period due to these tailwinds.
- In the integrated oil and gas industry, security selection was advantageous as rising oil prices supported oil-levered names across a variety of industries. Among our holdings, shares of Galp Energia, an integrated oil company with a Portuguese refining business and an Iberian solar business, moved higher following the announcement of a successful oil field discovery in Namibia, significantly boosting investor sentiment.
- In contrast, stock selection in commodity chemicals detracted. Our holdings in the industry fell on cyclical weakness, with lower electric vehicle (EV) demand impacting LG Chemical, a South Korean holding with an attractive EV battery business. Our other South Korean petrochemical company, Lotte Chemical, also weighed due to weak petrochemical margins amid over-supply.
- An overweight position and security selection in the fertilisers and agricultural chemicals had a negative impact. A difficult demand environment, driven by excess inventories built up in the previous year and volatile input costs for names in the industry, caused a challenging period of performance. Against this backdrop, out-of-benchmark exposure to Sociedad Quimica y Minera de Chile, an integrated producer of lithium, iodine and potassium-nitrate fertilisers, dragged.

How is the fund positioned?

Near-term uncertainty remains exacerbated by the geopolitical climate and macroeconomic backdrop and short-term cyclical risks are still present. Nevertheless, as our conviction in the long-term structural outlook has

strengthened, we are overweight versus the benchmark energy and base metals. Our focus within energy names remains on seeking to identify companies that are high quality, in which we have high conviction and/or which have compelling risk/reward profiles. We have increased our energy beta through attractive investments in companies with idiosyncratic drivers, including services names that are leveraged to our favourable view on offshore capacity growth and spending.

- For most of the period, we had an overweight position in base metals with an emphasis on copper given the favourable long-term outlook from secular trends of electrification increasing demand amid growing supply challenges. We trimmed our holdings in Freeport-McMoRan to manage our position size as recent copper price increases shifted our risk/reward view. However, we continue to appreciate the company's scale, liquidity and operational strength, and we like the exposure it gives to a potentially structurally favourable copper market.
- We increased our position in the integrated oil and gas industry, focusing on companies with solid balance sheets run by management teams that seek to create value through effective capital allocation. Within the industry, we added to ExxonMobil during the period overall, although we later trimmed our investment in order to manage the position size after its cash-and-stock purchase of Pioneer Natural Resources closed in May. We increased our position in Galp Energia as we believe it is an attractive long-term holding.
- Within electrical equipment and components, we initiated a position in GE Vernova, the recently spun-off company consisting of General Electric's power, renewables and infrastructure businesses. In our view, the company is a global leader in power technology that offers a unique opportunity to benefit from long duration secular trends in electrification, decarbonisation and grid modernisation. We believe GE Vernova's myriad self-help opportunities after its spinoff have the potential to meaningfully restore profit margins and drive free cash flow growth over time.

Effective 1 June 2024, Rick De Los Reyes assumed co-portfolio management responsibility for the Global Natural Resources Fund.

EOG Resources, Inc.	Energy	2.41
Marathon Petroleum Corp.	Energy	2.36

in our view, can provide long-term capital appreciation for our clients, and we believe the market will reward our disciplined and consistent approach to investing over the long term.

What is portfolio management's outlook?

A productivity wave in US shale, which collapsed energy cost curves globally, prompted a secular bear market in commodities beginning in 2011. The coronavirus pandemic then created historic demand and supply shocks — rivalling anything previously seen in oil — which were further exacerbated by the Russia-Ukraine war.

However, there is growing evidence that this commodity productivity wave is likely in the process of ending and a more structurally favourable commodity outlook beginning, a scenario that would create a more supportive backdrop for investing in commodity equities in the coming years. In the case of oil, while there are conflicting near-term, cyclical supply/demand signals, we are more constructive about the secular, long-term outlook as we see signs of productivity and low-cost inventory depth in US shale peaking. Natural gas remains challenged in the near term with higher inventories and supply in the US along with fewer near-term liquid natural gas (LNG) facility openings, yet the longer-term outlook looks more promising as the demand outlook with US LNG and potential further upside driven by data centres/AI has to be met by increasingly higher-priced supply. The challenge is not that the industry is running out of oil and gas. Rather, the industry appears to be running out of the cheap oil and gas that drove the prolonged bear market in energy. We have therefore been shifting our portfolio's exposures accordingly.

We remain committed to our data-driven, bottom-up stock selection process and our philosophy of owning a diverse selection of fundamentally sound natural resources companies with solid balance sheets and trusted management. Our expansive global research platform continues to help identify those companies that,

FUND INFORMATION

Investment objective

To increase the value of its shares, through growth in the value of its investments over the long term (a minimum of 5 years).

Investment policy

The fund is actively managed and invests at least 80% of total assets in a high conviction portfolio of shares and related securities issued by companies anywhere in the world, including emerging markets (up to 10% of the total assets of the fund).

Types of securities may include common shares, preferred shares, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs). Investment in China A shares may be made through the Shanghai-Hong Kong Stock Connect or the Shenzhen-Hong Kong Stock Connect programs.

The fund may also invest up to 20% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management. The use of derivatives is expected to be limited.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Use fundamental research and a proprietary global research platform to identify attractive investment opportunities and create a high conviction portfolio of typically 30 to 45 holdings.
- Focus on 1) quality companies with good management teams which can compound value over time; 2) cyclical companies with solid business models trading at depressed valuations; and 3) disruptive growth stocks.

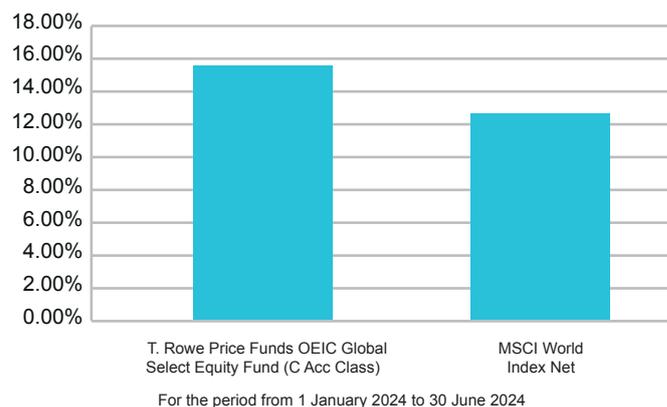

- Use scenario analysis to assess valuation and buy when the stock price offers a favourable risk/return trade off.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund’s portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Global Select Equity Fund recorded a solid absolute gain and outperformed the MSCI World Index Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

In British pound terms, global equities produced strong returns for the six-month period, which could be characterised as a tale of two quarters. The first quarter of 2024 was defined by broad-based optimism that major central banks were on track to deliver a number of interest rate cuts, artificial intelligence (AI)-driven exuberance and solid corporate earnings results. However, the second quarter saw choppy markets as investors worried about a number of geopolitical risks

T. Rowe Price Funds OEIC Global Select Equity Fund continued

and the prospects for a reduced number of interest rate cuts, if any at all, by central banks.

The fund outperformed its benchmark, mainly due to strong stock selection, while sector allocation detracted modestly. Our quality bias and focus on companies with profitable, mature and globally established names, exposure to both secular and durable growth as well as cyclicals and turnarounds across the style spectrum, helped give our portfolio balance and the ability to capture value in a volatile and unpredictable market.

- Stock selection in the information technology sector contributed the most to relative returns. Shares of NVIDIA moved higher as the company continued to deliver a series of consensus-beating results. We believe NVIDIA remains well positioned as a leading beneficiary of the ongoing infrastructure buildout to support AI functionality.
- Our holdings in the consumer discretionary sector also boosted relative results. Shares of Amazon.com traded higher following a series of impressive results even amid high expectations, with strong earnings, margin expansion and acceleration in cloud services. Improving cost efficiency, advertising and third-party business outperformance — as well as soaring free cash flow growth — were additional positives, and management indicated that it expects these trends to continue in 2024.
- Health care names aided relative performance further. Shares of pharmaceutical firm Eli Lilly continued to benefit from broader optimism surrounding GLP-1 drugs as well as a slew of bullish data points, including positive developments related to the firm's oral GLP-1 drug in development and messaging from management about overall capacity improvements. We continue to have high conviction in Eli Lilly and believe the firm will see meaningful acceleration in growth as GLP-1 adoption increases and additional clinical catalysts further expand the GLP-1 addressable market.
- Conversely, stock selection and an overweight position in industrials and business services hurt relative performance. Shares of tool company Stanley Black & Decker were pressured by inflation, weak consumer spending, elevated interest rates and a difficult housing market. We continue to have a positive view on the firm's strong brands and believe the company has made significant progress in improving and streamlining its portfolio of products.

How is the fund positioned?

While the odds of a global recession continue to decrease, we think there are other risks to the market, including outsized gains in some areas due to AI exuberance as well as the possibility that economic activity could reaccelerate, which is something investors are not currently pricing in. Given the heightened uncertainty we are facing, we think it all the more important to not focus on the macroeconomic but instead focus on balancing out our factor exposures so that our fundamental research and stock selection can shine.

- We meaningfully increased our health care allocation, and it remains the portfolio's largest overweight position versus the benchmark. We have high conviction in our positioning and think health care is a fertile ground for all three of our style buckets, with compelling durable growers, disrupters and cyclicals. We bought shares of Sartorius Stedim Biotech, a leading provider of equipment and consumables for biopharma manufacturing process solutions. The company has suffered through a pandemic-driven inventory correction that appears to be troughing. We expect sales in the second half of the year to accelerate, and we maintain a positive view on the long-term secular growth outlook for bioprocessing equipment.
- We are also overweight industrials and business services versus the benchmark, where we see meaningful opportunity in the current market to find companies that can weather a choppy market environment and still deliver solid revenue and cash flow growth. We added to our current positions, especially electrical equipment manufacturer Hubbell, Stanley Black & Decker and Japanese industrial conglomerate Itochu.
- We significantly reduced our exposure to consumer staples, eliminating the only holding we owned in the sector, Kenvue. The company, which owns well-known brands like Tylenol, Advil and Motrin, missed revenue estimates in the fourth quarter and released soft guidance for 2024, so we subsequently elected to move on from the name in April. We felt the risk/reward profile no longer met our threshold for continued inclusion in the portfolio.

Olympus Corp.	Health Care	3.28
Corebridge Financial, Inc.	Financials	3.22
Meta Platforms, Inc. 'A'	Communication Services	3.22
RenaissanceRe Holdings Ltd.	Financials	3.04

Our portfolio continues to have a quality bias. Within our three style buckets, we are overweight durable growers but still have exposure to companies that are potential disruptors and cyclical and turnarounds. Overall, we remain true to our investment framework, are avoiding portfolio-defining macroeconomic variable exposures and are leveraging our research advantage through bottom-up stock picking with a focus on high-quality, world-leading companies that possess strong pricing power and differentiated service capabilities or products.

What is portfolio management's outlook?

The global economy has been surprisingly resilient, particularly in the US, and inflation has been stickier than policymakers originally anticipated — meaning that interest rates have stayed higher for longer and will likely continue to stay higher in the near future. We are seeing signs of some deceleration, with inflation cooling and economic data moderating, though at a slow pace, which is an encouraging sign for a “soft landing.” It appears that the risk of a recession or hard landing is decreasing, and in fact, some areas, like manufacturing, are starting to see reacceleration after nearly 18 months of modest contraction. Manufacturing activity is generally considered a harbinger of broader economic activity, which means that there is a non-zero possibility that the global economy actually begins to reaccelerate and that central banks may need to raise interest rates rather than cut. We think that is the biggest risk to the stock market.

While our portfolio is not driven by macroeconomic views, the current environment offers a good use case for our investing philosophy: focusing on idiosyncratic stock picking and balancing style and cyclical exposures with the intention of neutralising macroeconomic variable exposures. We think owning companies that have pricing power and an idiosyncratic change story where they are improving while operating in a benign industry can help add value no matter the market environment. Right now, the portfolio has exposure to several large themes that are dominating the market: AI, GLP-1s and electrification. However, we also have exposure to areas such as housing, factory automation and health care bioprocessing — industries that have been cyclically depressed but that could be poised for reacceleration. While there are risks in these areas, we are also getting rewarded for taking that risk, and this helps balance out the portfolio.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately volatile.

The SRRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

T. Rowe Price Funds OEIC Global Technology Equity Fund

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a diversified portfolio of shares of technology development or utilisation companies, with a focus on those that, in the opinion of the investment manager, are leading global technology companies. The companies may be anywhere in the world, including emerging markets.

Specifically, the fund invests at least 70% of total assets in shares and related securities of technology-focused companies, such as common stocks, preferred stocks, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund does not invest more than 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Utilise a proprietary global research platform in the analysis of companies, sectors and industry trends.
- Invest primarily in medium- to large-sized companies with strong and/or increasing market share and product pipelines that appear to be strategically poised for long-term growth.
- Seek to avoid investing in overvalued stocks by purchasing companies with strong business models and ensuring that multiples are reasonable relative to a company's history, its peers, and the market.

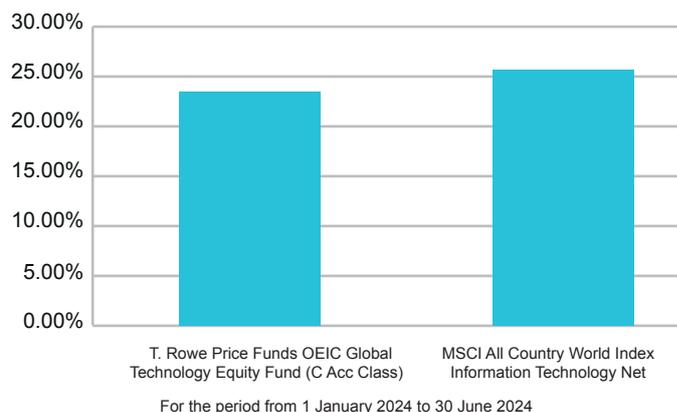

- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund's portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Global Technology Equity Fund recorded a strong absolute gain but underperformed the MSCI All Country World Index Information Technology Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

Global equities produced strong returns during the period. The first quarter of 2024 was defined by broad-based optimism that major central banks were on track to deliver a number of interest rate cuts, artificial intelligence (AI)-driven exuberance and solid corporate earnings results. However, the second quarter saw choppy markets as investors worried about a number of geopolitical risks and the prospects for a reduced number of interest rate cuts, if any at all, by central banks.

T. Rowe Price Funds OEIC Global Technology Equity Fund continued

Within the portfolio, negative stock selection was responsible for relative underperformance while subsector allocation was positive. Our security choices in software detracted the most. Within semiconductors, stock selection also hurt, as did our investments in industrials. Conversely, the fund's underweight allocations to hardware and IT services contributed positively as the subsectors trailed the benchmark during the period.

- Within software, an underweight position in Microsoft detracted as its shares moved higher on news that the company was further expanding its AI capability. The company also reported robust back-to-back quarterly results, with growth in its Azure segment due to continued AI and cloud strength, boosting its share price further. We appreciate Microsoft's potential strength in layering AI capabilities into its already-attractive suite of products, which creates new growth opportunities.
- Our position in Advanced Micro Devices dragged the most within semiconductors. Its shares rose but lagged sector peers on concerns over whether the company would be able to export its attractive new products to China. A mixed earnings report that lacked visibility toward near-term growth in its new suite of graphics processing units also dented sentiment towards the stock, as did uncertainty over the impact of upcoming US presidential election on chip providers. Still, we are constructive on the potential for a new product launch with advanced AI capabilities to add meaningful upside for the company.
- Within industrials, sentiment towards Tesla was hurt by a variety of factors, including price cuts, vehicle recalls in China and production delays in Germany. Shares also declined on an earnings miss driven by lower-than-expected revenue across all segments and declining gross margin, although they recovered partially late in the period. We believe structural cost, technology and cultural advantages should enable Tesla to continue to disrupt the automotive industry, while it also diversifies into less cyclical and higher-margin verticals such as energy storage and autonomous driving.
- Conversely, an underweight allocation to hardware contributed to relative returns. In particular, our below-benchmark position in Apple was advantageous as its shares produced solid gains but lagged subsector peers amid potential regulatory issues over its music platform in Europe

and iPhone monopolisation claims in the US. Concerns around weakening growth rates and geopolitical risks also hurt the stock. Despite the underweight allocation, we are constructive on Apple's earnings growth potential, thanks to a design-led culture that combines hardware and software to create a formidable moat, as well as its shift to a more recurring revenue model.

How is the fund positioned?

Our largest absolute position in the portfolio is in semiconductors. We remain overweight versus the benchmark digital semiconductor, semi-cap equipment and memory companies as we think this cohort of technology companies is the clearest direct beneficiary of AI in the short to medium term due to the increased capital expenditures from hyperscalers. The portfolio also has a large absolute position in software, although we are underweight versus our benchmark. We continue to believe enterprise software is one of the best business models in the world, and we believe AI is more likely to be an opportunity for these companies rather than a threat. Within the internet space, we continued to find companies that are benefitting from a recovery in e-commerce.

- In semiconductors, we initiated a position in Broadcom, a large digital semiconductor company with a communications focus. We like its world-class application-specific integrated circuits and networking switch technology as well as its meaningfully improving fundamentals. We think the company will benefit from an acceleration in its semiconductor business and price increases in its software business.
- In software, we added to Synopsys, the largest and fastest-growing electronic design automation company with a dominant position in digital designs. In our view, its pending purchase of Ansys, an engineering software vendor, has the potential to add significant value given potential synergies and AI capabilities with both companies' technology.
- Within internet, we initiated a position in Sea, an e-commerce platform with a growing presence in Southeast Asia, at what we think is an attractive valuation. We believe the company has the potential to accelerate growth in the near term as it continues to demonstrate market share gains, and we appreciate the significant cash flow generated by its fintech and gaming segments.

T. Rowe Price Funds OEIC Global Technology Equity Fund continued

Top 10 issuers as at 30 June 2024

Amazon.com, Inc.	Consumer Discretionary	2.34

What is portfolio management's outlook?

Strong performance in technology stocks in the first six months of this year was driven in part by continued investment in AI, which has created one of the largest infrastructure spending cycles. Recent earnings reports showed a bifurcation between semiconductors and software, with semiconductor company earnings continuing to demonstrate accelerating fundamentals while select software companies posted modestly lower guidance in revenue, which resulted in deteriorating stock price performance.

Looking ahead, we remain focused on finding companies that sell linchpin or indispensable technology, innovating in secular growth markets, with improving fundamentals and reasonable valuations. We plan to continue riding the AI wave responsibly and pick up alpha – excess market returns – where we can outside of AI. However, we maintain our view that AI is the best theme within technology and the most attractive area for alpha generation in the global technology universe.

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately high.

The SRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRI score is based on the highest score among all classes of the fund.

Lower risk ← Higher risk
Potentially lower reward Potentially higher reward

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

T. Rowe Price Funds OEIC Global Value Equity Fund

FUND INFORMATION

Investment objective

To increase the value of its shares, through growth in the value of its investments over the long term (a minimum of 5 years).

Investment policy

The fund is actively managed and invests at least 80% of total assets in a diversified portfolio of undervalued shares and related securities issued by companies anywhere in the world, including emerging markets (up to 10% of the total assets of the fund). Value is assessed by looking at indicators such as cash flows, dividends and earnings to identify securities which the investment manager believes have been undervalued by the market.

Types of securities may include common shares, preferred shares, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund may also invest up to 20% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management. The use of derivatives is expected to be limited.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Emphasise attractively valued companies, including both defensive higher quality companies and higher risk deeper value companies.
- Employ rigorous and comprehensive research to identify and assess investment opportunities.

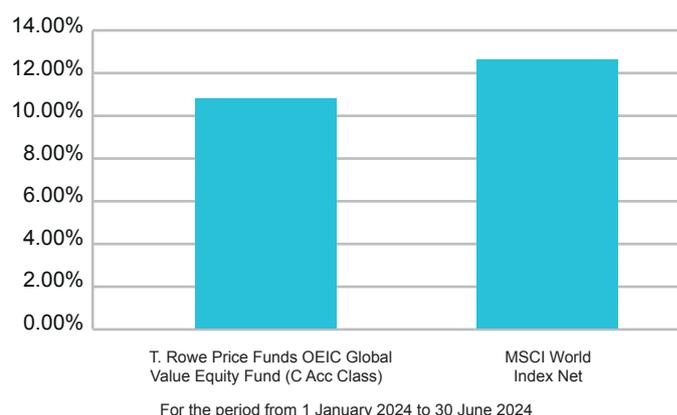

- Allocate country and sector positions through the consideration of the attractiveness of individual investments as well as the macroeconomic environment.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund's portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Global Value Equity Fund recorded an absolute gain but underperformed the MSCI World Index Net for the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

Global equities rose in the first half of the year as optimism about artificial intelligence (AI) drove a rally in technology stocks, particularly high-growth companies in the US. Generally favourable corporate earnings also boosted the mega- and large-cap areas of the market, while stocks of smaller companies were hurt by diminished expectations for interest rate cuts in the US

T. Rowe Price Funds OEIC Global Value Equity Fund continued

this year due to stubborn inflation. Against this backdrop, growth-oriented areas of the market outperformed their value counterparts.

- Within the fund, our choice of securities in Japan hurt relative returns the most on a country basis, while our overweight allocation also dragged. Shares of telecommunications company Nippon Telegraph and Telephone retreated as its below-consensus quarterly earnings release curbed investor risk appetite. Management also cut its 2025 earnings guidance due to an expected decline in its non-core asset sales, which added to concerns.
- Information technology (IT) was the strongest-performing sector in the benchmark as investor enthusiasm about AI pushed shares higher. As a result, our underweight allocation here hurt relative performance. In particular, not owning US-based multinational technology corporation NVIDIA weighed as its shares soared during the review period.
- In contrast, stock selection in financials was a bright spot. Here, our investment in Italian bank Intesa Sanpaolo registered robust gains on the back of its solid quarterly results. Earnings were driven by encouraging fee growth as well as better income in its wealth and insurance segments.
- Our off-benchmark position in Taiwan also contributed to relative returns, led by our holdings in Taiwan Semiconductor Manufacturing. The company's shares rallied on optimism about AI, while its better-than-expected results for the first quarter boosted its stock valuation further. The firm reported improved demand for its smartphones, and high-performance computing and operating profits were also ahead of consensus amid lower capital expenditure.

How is the fund positioned?

Our portfolio is balanced between higher-quality, free cash flow-generative companies as well as the more cyclical and deep value areas of the market. We have relative overweight positions in financials, materials, energy and the traditionally more defensive health care sector. Conversely, we have large underweight allocations to IT and consumer discretionary relative to the benchmark.

- As valuation spreads narrow, we explored opportunities in the more defensive and higher-quality areas of the value universe. As a result, we increased our exposure to the utilities sector. We

purchased shares of National Grid, a UK-based utility transmission and distribution infrastructure company, to take advantage of its attractive valuation following a rights issue in May. National Grid monopolistically owns and operates the high-voltage electricity transmission network in England and Wales, as well as the largest electricity distribution network operator. The company has set out a five-year investment plan to revamp the UK's electricity grid due to an anticipated surge in electricity demand and the integration of renewable energy projects necessary to meet the UK's decarbonisation targets by 2035. We anticipate that this structural plan will contribute to growth and benefit the company's stock.

- We increased our relatively overweight position in the energy sector. For example, we purchased shares of French energy and petroleum company TotalEnergies. In our view, the company's stock was undervalued on the back of political uncertainty in France in the latter part of the review period, and we invested in the name to benefit from this weakness. We believe that TotalEnergies is a strong asset that offers both the value and quality characteristics that we seek. It has one of the top management teams among oil majors and a solid track record in allocating capital, in our view.
- Elsewhere in the portfolio, we reduced our exposure to real estate. Here, we exited Mitsubishi Estate, a large real estate developer in Japan, to take advantage of its recent share price strength. The company has benefitted from a reflationary environment, and we believe that it has little upside potential in the near term.

What is portfolio management's outlook?

Value investing has a long history of delivering above-average returns, and with the reemergence of

T. Rowe Price Funds OEIC Global Value Equity Fund continued

inflation and central banks implementing one of the fastest interest rate-hiking cycles in history, we have seen a material evolution in the market environment back to a more normal one. The field is now much more even, offering increased opportunities for value investors.

While some parts of the value universe are economically sensitive, such as banks and “highly cyclical” industrials, there is also a strong balance of defensive areas, such as health care, and companies that have strong pricing power, especially in traditional industries such as utilities and consumer staples. In recent years, by increasing the allocation to more defensive parts of the value universe, we have implemented a more balanced profile in the portfolio. In our view, there is also scope for market worries on rates and inflation to somewhat subside as major central banks, namely the US Federal Reserve, appear to be near a peak in their interest rate-hiking cycles.

With supply chains now largely restored, and the effects of deglobalisation and onshoring accelerating, we are expecting higher levels of capital expenditure. This should also be accelerated by the desire to meet net zero targets with the push for cleaner energy and decarbonisation not only benefitting energy companies but across multiple industries. Further, governments may be more willing to engage in higher levels of fiscal spending to beat inflation, address future economic shocks and fulfill a social agenda, as they have seen how effective such spending has been in the recent past. This combination of both higher capital expenditure and fiscal spending is likely to be beneficial to many value-oriented companies as well as put ongoing upward pressure on inflation and interest rates.

Overall, we remain focused on a bottom-up view, and we invest in the best ideas from across the value spectrum of our global research platform. We aim to balance our exposure to economically sensitive and “deep value” names; hold companies with strong free cash flow generation that is not yet fully appreciated by the market and with the scope to increase shareholder returns; and look for pockets of controversy where fundamentally sound, well-run businesses face unwarranted investor skepticism. Given our robust research platform and collective experience, we are confident in our ability to find these unique opportunities before their potential becomes obvious to other investors.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately volatile.

The SRRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

T. Rowe Price Funds OEIC Japanese Equity Fund

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a widely diversified portfolio of shares of companies in Japan.

Specifically, the fund invests at least 70% of total assets in shares and related securities of companies that are either incorporated in Japan or conduct most of their business there. Types of securities may include common stocks, preferred stocks, warrants, American Depositary Receipts (ADRs), European Depositary Receipts (EDRs) and Global Depositary Receipts (GDRs).

The fund does not invest more than 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Consider macroeconomic factors in the implementation of a primarily bottom-up and research driven process.
- Seek growth opportunities across the market capitalisation and market sector spectrums.
- Manage risk at stock, sector, and market cap-range levels.
- Use portfolio rebalancing as an effective risk management tool.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most

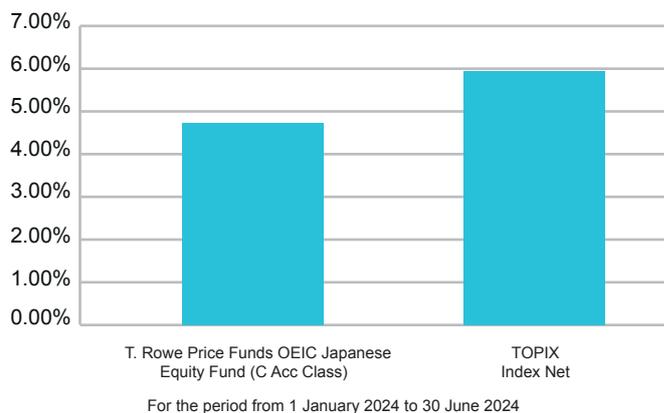

likely to have a material impact on the performance of the holdings or potential holdings in the fund's portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The Japanese Equity Fund recorded an absolute gain but underperformed the TOPIX Index Net in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

With the Bank of Japan (BoJ) ending its negative interest rate policy in March, investors focused on the prospect of further monetary policy normalisation. The yen remained under pressure from US-Japan interest rate differentials, prompting Japanese authorities to intervene to prop up the currency. Weakness in the yen remained a tailwind for Japanese equities, helping exporters, which were also buoyed by robustness in the global economy. Domestically, inflation and wage growth were on an upward trend with spending picking up.

- Within the portfolio, information technology and services was the biggest area of weakness, as our stock picks and underweight allocation held back gains. Internet Initiative Japan, a leading provider of network, cloud and security solutions, was a major laggard. Its shares fell sharply after

T. Rowe Price Funds OEIC Japanese Equity Fund continued

the company announced that its profits were low because revenues from several projects would not be recognised until early next year or later, while the pass-through of an increase in licensing costs could take longer than expected. We sold out of the stock over the review period.

- Our underweight exposure to banks, many of which are well positioned to capitalise on interest rate normalisation in Japan and, more specifically, BoJ cash rate increases, detracted.
- Security choices and a below-benchmark allocation to automobiles and transportation equipment also hurt. Our underweight position in Toyota Motor dragged as the auto producer's shares reached a record high, with the company's earnings nearing their peak.
- In contrast, our stock picks were favourable in electric appliances and precision instruments, with Hitachi a major contributor. The electronic equipment conglomerate reported a positive trading update during the period in which it announced buybacks while also issuing strong forward guidance for fiscal year 2025. Hitachi's results showed strong performance from its energy segment where the company believes it can drive strong earnings growth going forward.
- Machinery was a further area of strength. Disco, a manufacturer of cutting and grinding tools used in semiconductor and industrial industries, continued to benefit from artificial intelligence-related demand and weakness in the yen.

How is the fund positioned?

Hiroshi Watanabe assumed full responsibility in his capacity as portfolio manager of the Japanese Equity Fund as of 1 July 2024. Therefore, some of the trades later in the review period were reflective of Hiroshi's intended portfolio.

The benchmark (TOPIX Index) has not changed, and the portfolio will continue to invest in 60–80 holdings. Stock positions are expected to range +/- 3%, while sector exposures can be expected to be more closely managed, relative to the past — typically +/- 5%. With sector and style more neutralised, the focus will be on stock selection and the asymmetric risk/reward — opportunities where our investment team sees upside relative to the risks priced in the market.

Similarities will remain in the portfolio, and one to highlight is our belief that improving governance will drive shareholder returns for many businesses in Japan. We own a number of these improvers (Toyota Industries, Seven & I, Mitsubishi Estate, Tokio Marine), many of which will be familiar names. Improving governance is only getting more focus across Japanese corporates, and we want to own those with the highest potential.

- For example, our investment thesis in Toyota Industries, a stable business focused primarily on forklifts and other material handling equipment, is predicated on the trend toward improved balance sheet efficiency at the Toyota Group level.
- We hold Tokio Marine Holdings given our view that the accelerated reduction of policy shareholdings will deliver better bottom-line growth than the market expects. Policy share reduction should meaningfully enhance return on equity through capital gains, broker fee reduction and shareholder return improvement.

Top 10 issuers as at 30 June 2024

Renesas Electronics Corp.	Information Technology	2.62

What is portfolio management's outlook?

Signs of a sustainable return of inflation in Japan are encouraging and likely a huge boost for investor and business sentiment. As inflation continues to trend higher in Japan, wage hikes have started to come through, which should be very supportive for the consumer and domestic consumption. These wage increases have been primarily in the large-cap sectors for now, but we believe medium and smaller companies will follow their lead.

Increasing inflation is also forcing Japan's corporates to question the excess cash on their balance sheets as the time value is eroded. With that, Japanese corporates are buying back stock and returning capital to shareholders at record levels. As corporate

T. Rowe Price Funds OEIC Japanese Equity Fund continued

governance reforms continue to make headway, we expect to see higher returns on capital, which is positive for the health of Japanese companies and signals the ongoing improvement in governance at the corporate level. Furthermore, long-term secular trends like growth in factory automation, the use of robotics and vehicle electrification are highly supportive of many Japanese industries.

The outlook for Japanese equities is favourable, and the market remains a good hunting ground for bottom-up, fundamental investors to find quality businesses at reasonable prices.

C Inc 9 shares: The share class was launched on 18 February 2019.

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

T. Rowe Price Funds OEIC Japanese Equity Fund continued

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately high.

The SRRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRRI score is based on the highest score among all classes of the fund.

Lower risk ← Higher risk
Potentially lower reward Potentially higher reward

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

FUND INFORMATION

Investment objective

To increase the value of its shares, through growth in the value of its investments over the long term (a minimum of 5 years).

Investment policy

The fund is actively managed and invests at least 80% of total assets in a diversified portfolio of shares or related securities issued by companies that are either incorporated in the United States of America or conduct most of their business there.

Types of securities may include common stocks, preferred stocks, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund may also invest up to 20% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management. The use of derivatives is expected to be limited.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager’s approach is to:

- Seek out opportunities where they exist in the market, having the flexibility to invest in a broad range of sectors, investment styles, and market capitalizations. While the fund generally takes a growth approach to security selection, the fund has the flexibility to opportunistically invest in companies with either growth or value characteristics.
- Seek to invest in companies with favourable fundamentals, such as a strong balance sheet, sound business strategy, and promising competitive positioning.

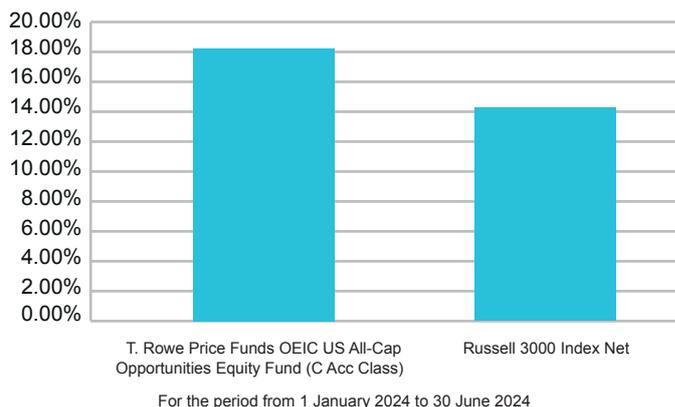

- Select those companies that have the most favourable combination of company fundamentals, earnings potential, and relative valuation.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund’s portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The All-Cap Opportunities Equity Fund recorded a strong absolute gain and outperformed the Russell 3000 Index in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund’s performance?

Favourable stock selection was responsible for the fund’s relative outperformance. Throughout the period, we took a relatively cautious approach, focusing on stock selection within ideas that should be able to outperform regardless of the economic backdrop. As a result, we generated returns through stock selection, a byproduct of our four-pillars framework.

T. Rowe Price Funds OEIC US All-Cap Opportunities Equity Fund

continued

- Within the portfolio, our stock choices in the consumer discretionary sector contributed. For example, our underweight exposure to Tesla assisted returns. While it recovered some ground towards the end of the period, shares of the electric vehicle (EV) manufacturer finished lower in response to several continued headwinds, including rising competitive threats, a series of idiosyncratic production disruptions, and concerns around tepid consumer demand despite recent price cuts. While there is some near-term uncertainty surrounding the EV manufacturer, we believe that structural cost, technology, and cultural advantages should enable Tesla to continue to disrupt the automotive industry while also diversifying into less cyclical and higher-margin areas, such as energy storage and autonomous driving.
- Information technology also added value due to our security choices, although an underweight sector allocation capped gains. Shares of NVIDIA extended their strong run through the first half of the year as demand for the chipmaker's leading-edge graphics processing units (GPUs) continued its upward trajectory across a widening customer base amid the race to build out artificial intelligence (AI) infrastructure. NVIDIA's dominant position in state-of-the-art GPUs, combined with its embedded software, has created an expanding moat behind which it should be able to continue to innovate and grow earnings.
- Conversely, stock picks in the energy sector detracted; however, an overweight position in the segment helped mitigate losses. Shares of SLB traded lower late in the period as the global leader in oil field services fell in step with industry peers after emerging negative data points around US and Chinese oil demand and news of increased production from OPEC weighed on exploration-levered names. Still, we believe SLB is a technological leader in its field with attractive scale and a strong reputation for performance, and we are constructive on its ability to monetise that and return money to shareholders through its improved capital allocation plans.
- Consumer staples hurt relative results further due to adverse security selection, although an average underweight position offset losses in the sector. Our position in Celsius Holdings, which we initiated midway through the period, detracted. Unfavourable commentary around a sizable and

sudden slowdown in sales for both Celsius and its industry peers dented sentiment as the review period progressed. We are constructive on the company, which is the fastest-growing brand in the structurally attractive US energy drink industry, and we believe it has a runway to expand margins and continue to meaningfully increase its market share through its growing brand appeal with women and young adults.

How is the fund positioned?

We continue to seek investment opportunities in companies that fit our four-pillar framework: quality, expectations, trajectory, and valuation. While we maintain a constructive view on the economy leading up to the US presidential election, we continue to focus on stock selection to create a bottom-up portfolio of names with the potential to outperform regardless of the economic backdrop.

- In the health care sector, we added a position in UnitedHealth Group. While we continue to believe that Medicare Advantage companies over-earned in the last decade and will see a long-term correction, we think UnitedHealth Group has demonstrated that it can navigate this environment well without impacting earnings. In our view, UnitedHealth Group's leadership in the fast-growing Medicare Advantage market and its Optum business, which captures a larger share of health care spending by providing services like value-based care delivery, analytics, and prescriptions in a cost-effective manner that results in better outcomes for patients, combine to make the company well positioned against peers.
- During the period, we added to select names in the consumer staples sector. We initiated a position in Procter & Gamble, a leading household and personal care products manufacturer. In our view, the company's recent elevated reinvestment spend leaves it well positioned to defend its earnings baseline amid pronounced inflation and currency pressure. In addition, we believe the company's gross margins will recover and its recent underperformance creates an attractive risk/reward profile in the long term.
- Our largest net purchase during the period was in Apple. We believe the consumer technology giant represents an attractive risk/reward trade-off at current valuation levels as its iPhone segment

T. Rowe Price Funds OEIC US All-Cap Opportunities Equity Fund continued

has a positive setup for growth in 2025 due to an aging installed base and the potential for AI enhancements to drive a shorter replacement cycle. We also appreciate Apple's potential to leverage its positioning and partner with AI tool providers seeking to access its vast user base, which should benefit the company's services segment.

Coca-Cola Co. (The)	Consumer Staples	1.67

What is portfolio management's outlook?

As always, we want to refrain from making pronounced top-down macroeconomic calls in the portfolio, but we are seeing some data points — such as slowing industrial activity and weakness in consumer spending — that give us pause. We think the US economy will continue to slow gradually, but whether that deceleration is slow enough to matter to markets is up for debate. With respect to the US presidential election, we are of the mind that a lot of business decisions are currently on hold until decision-makers have more clarity on whether the prevailing regime will be a favourable one for them, which will be variable from one industry to another.

Generally speaking, from a portfolio perspective, given the recent success of some of our larger investments, we have taken some profits and dialed back the growth tilt in favour of some defensive exposure in anticipation of the next big market move, for which the direction is currently unclear. We will continue to rely on the time-tested four-pillars framework when navigating uncertain market conditions.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately volatile.

The SRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

T. Rowe Price Funds OEIC US Equity Fund

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a diversified portfolio of shares of companies in the United States.

Specifically, the fund invests at least 70% of total assets in shares and related securities of companies that are either incorporated in the United States of America or conduct most of their business there and that have a market capitalisation equal to or greater than the companies in the Russell 1000 Index. Types of securities may include common stocks, preferred stocks, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund may invest up to 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Target attractive opportunities across the investable universe, irrespective of growth or value style.
- Utilise a proprietary global research platform using fundamental analysis with a bottom-up approach combined with an in-depth valuation assessment.
- Integrate an active risk management process throughout its analysis.

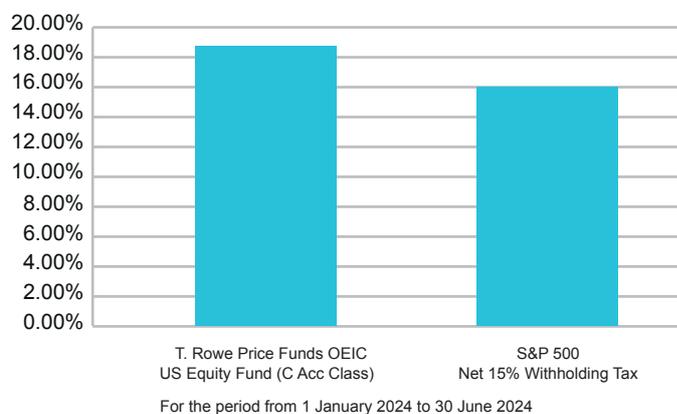

- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund’s portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The US Equity Fund recorded a strong absolute gain and outperformed the S&P 500 Net 15% Withholding Tax Index for the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

Major US stocks advanced in the first half of 2024, adding to the previous year's strong gains amid continued optimism for a soft economic landing. Generally favourable corporate earnings reports and investor enthusiasm for artificial intelligence (AI) lent further support to markets, although tempered interest rate cut expectations and geopolitical tensions kept the gains in check.

T. Rowe Price Funds OEIC US Equity Fund continued

For the six-month period, stock selection in information technology (IT) contributed the most to the fund's relative outperformance. Security choices in the consumer discretionary sector also added value. Conversely, stock selection and an overweight allocation to the industrials and business services sector detracted the most from relative returns. Our energy holdings also held back performance.

- In the IT sector, shares of NVIDIA surged as ongoing optimism around AI products and services continued to grow. The graphics processing unit (GPU) creator posted two sets of earnings and guidance reports that beat expectations over the period, most recently with robust growth in its data centre segments reflecting the incredible demand for its products that enable AI usage. Management also announced a 10-for-1 stock split, which was completed in July, after the time period this report covers. NVIDIA's dominant position in state-of-the-art GPUs, combined with its embedded software, has created an expanding moat behind which the chipmaker should be able to continue to innovate and grow earnings.
- Within consumer discretionary, our lack of exposure to Tesla assisted performance. Despite recovering some ground toward the end of the period, shares of the electric vehicle (EV) manufacturer finished lower, facing selling pressure in response to several continued headwinds, including rising competitive threats, a series of idiosyncratic production disruptions, and concerns around tepid consumer demand despite recent price cuts. We do not hold Tesla within the portfolio as it does not meet our investment parameters.
- In industrials and business services, shares of Old Dominion Freight Line traded lower amid softening demand within the trucking market. After reporting an in-line quarter earlier in the period, reflecting strong pricing but weaker volumes, the less-than-truckload carrier missed estimates on its latest earnings report, partially due to less-than-expected tonnage amid a challenging freight backdrop. The company continues to take market share due to its premium product offering, and we believe that this, combined with its best-in-class management team, should support margin growth as the freight backdrop improves.
- Within energy, shares of SLB, formerly known as Schlumberger, declined in the latter half of the period as the leader in oil field services reported underwhelming quarterly earnings and underperformed margin expectations. The stock fell further in June along with its industry peers amid broad-based weakness in energy. We believe that SLB is one of the best franchises within the oil field services space and that it is well positioned to benefit from growing energy capital expenditure over the next several years.

How is the fund positioned?

Our portfolio positioning is mainly driven by fundamental, stock-specific views. Over the half-year period, we continued to look for high-quality companies that have opportunities to increase their market share or that have barriers to entry around their businesses that will allow them to grow organically in a variety of market environments.

- The IT sector has the greatest absolute allocation within the portfolio, and our underweight exposure relative to the benchmark decreased over the review period. In this space, we bought shares of connector and sensor business TE Connectivity, whose technology leadership within high-voltage automotive interconnects could allow the company to benefit from rising EV penetration. Conversely, we reduced our stake in software company Microsoft to manage our position size following its share price strength. In our view, the company's broad-based success in cloud computing and its early leadership in AI have positioned it well for durably fast revenue and free cash flow growth.
- Over the period, we reduced our overweight allocation to health care relative to the benchmark. That said, we still found compelling opportunities within the sector, including Mettler-Toledo International, a leader in measurement and precision instruments for industry, laboratories, and retail. Historically, the company has consistently delivered results and guidance that beat expectations with free cash flow conversion, and we believe that the company's business mix enables increased consistency and visibility versus other life sciences tools peers. In our view, its favourable positioning around automation and digitisation trends in laboratory and industrial markets should help support a return to growth.

T. Rowe Price Funds OEIC US Equity Fund continued

- Finally, we eliminated our exposure to the utilities sector on the expectations that utilities stocks will contend with leverage and regulation concerns in the future. Here, we divested our position in Constellation Energy, an independent producer of clean energy, to harvest gains on recent share price appreciation.

Top 10 issuers as at 30 June 2024

Issuer	Sector	% of Net Assets
Microsoft Corp.	Information Technology	7.91
NVIDIA Corp.	Information Technology	7.21
Apple, Inc.	Information Technology	4.96
Alphabet, Inc. 'C'	Communication Services	4.58
Amazon.com, Inc.	Consumer Discretionary	4.42

UnitedHealth Group, Inc.	Health Care	1.98
Thermo Fisher Scientific, Inc.	Health Care	1.94
JPMorgan Chase & Co.	Financials	1.92

What is portfolio management's outlook?

We believe the odds of a recession in the US in the near term and, simultaneously, a soft economic landing have increased. The main risk, from our perspective, is an environment similar to that of the "Nifty Fifty" era in which inflation, after a period of stagnation, reaccelerates dramatically, leading to a prolonged recession. As a result, the portfolio continues to remain defensively positioned; however, we are opportunistically adding to cyclical areas of the market, which should help the portfolio perform well across a range of market outcomes. As always, we remain committed to identifying fundamentally sound, high-quality companies that possess an attractive, risk-adjusted return algorithm.

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

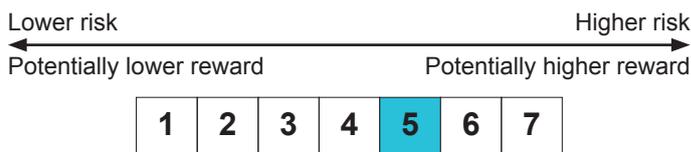

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market that is moderately volatile.

The SRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a diversified portfolio of shares from large capitalisation companies in the United States that have the potential for above-average and sustainable rates of earnings growth.

Specifically, the fund invests at least 70% of total assets in shares and related securities of companies that are either incorporated in the United States of America or conduct most of their business there and that have a market capitalisation equal to or greater than the companies in the Russell 1000 Index. Types of securities may include common stocks, preferred stocks, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund does not invest more than 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Scrutinize both company- and industry-level fundamentals to identify companies with characteristics that support sustainable double-digit earnings growth.
- Focus on high-quality earnings, strong free cash flow growth, shareholder-oriented management, and rational competitive environments.

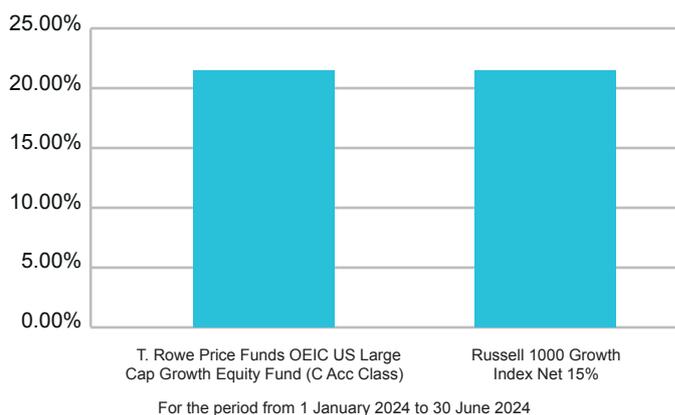

- Exploit differences between secular and cyclical trends.
- Limit portfolio holdings to the most attractive growth opportunities across industries.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund’s portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The US Large-Cap Growth Equity Fund registered an absolute double-digit return and performed in line with the Russell 1000 Growth Net 15% Index during the six month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

The fund recorded a strong performance in the first half of 2024. Our relative underweight allocations to several underperforming names and strong performances from a few of our more idiosyncratic ideas were beneficial.

T. Rowe Price Funds OEIC US Large Cap Growth Equity Fund continued

- Stock selection in the consumer discretionary sector contributed the most to relative returns. Our lack of exposure to Tesla was particularly helpful. Shares of the electric vehicle manufacturer finished the period lower, facing selling pressure in response to several headwinds, including rising competitive threats, a series of idiosyncratic production disruptions and concerns around tepid consumer demand despite recent price cuts.
- Industrials and business services also added value due to our underweight position and stock choices in the sector. Howmet Aerospace is a supplier of highly-engineered materials for use in aerospace, defence, automotive and industrial end markets. Its shares climbed higher during the period, supported by consecutive better-than-anticipated earnings releases that included consensus-topping revenue growth and margin expansion across most of the company's business segments, despite facing headwinds in the aerospace end market. It is our belief that we are in the early innings of a post-pandemic upcycle in original equipment manufacturing for aerospace, and that Howmet is well positioned to outperform through this upcycle given its best-in-class management team, technical advantages in mission-critical products, and strong pricing power.
- In contrast, information technology (IT) held back relative gains due to security selection. Shares of Atlassian underperformed amid consecutive mixed quarterly results. While the collaboration and workflow software provider posted solid headline results, strength continued to be driven by its data centre segment despite Atlassian's push to migrate customers to its cloud services. The stock also fell late in the period amid strengthening headwinds in the enterprise software space, including rising concerns around companies reallocating budgets toward artificial intelligence (AI) investments. We remain constructive on Atlassian as it continues to navigate the cloud migration process — from which we think it will see significant long-term benefit — due to its advantaged position as a standard in software workflows, limited competition, and slate of under-monetised products.
- An overweight exposure and adverse stock choices in the financials sector also hampered relative performance. Our out-of-benchmark position in Global Payments, which we eliminated during the

period, detracted. Shares of the electronic payments name fell sharply in the wake of its relatively in-line quarterly results in May amid growing investor concerns over the company's margin trajectory.

How is the fund positioned?

We continue to be positioned for a more modest return environment. During the period, we added to select names with idiosyncratic growth stories that we think stand to benefit regardless of the macroeconomic backdrop. Selling activity in the period was limited. We trimmed our exposure to the communication services sector, and select names in the software, financial services and beverages industries were also sources of funds.

- The IT sector remains our largest exposure on an absolute basis. We favour companies with durable business models that address large and growing markets, including semiconductors and semiconductor equipment, public cloud computing and consumer technology. We added to our stake in Adobe. We maintain our belief that the company will be a beneficiary of generative AI-induced demand as its rapid progress on integrating the technology into its design and graphics software offerings has shifted Adobe from being viewed as a laggard in the space to a leader with prospects for higher growth.
- We are constructive on stock-specific opportunities within the consumer discretionary sector. During the period, we bought shares of Amazon.com, which remains one of our top ideas. Amazon has three businesses (e-commerce, Amazon Web Services and advertising) that each are levered to durable secular growth themes, are attacking huge addressable markets and have plenty of runway left for growth. Amazon also continues to reinvest profits into other segments like devices and video, which should bode well for future growth and enhance the overall value proposition of its expanding ecosystem.
- Our relative overweight exposure to financials versus the benchmark is focused on financial services companies, specifically high-quality electronic payments names that we believe possess unique and durable growth opportunities. We eliminated our position in Global Payments following the electronic payments company's quarterly earnings on reduced risk/reward trade-off due to concerns around margin compression.

What is portfolio management's outlook?

After a strong start to the year, we think investor exuberance is likely to gradually moderate in the second half of 2024. However, the focus will remain on the Federal Reserve (Fed) as it attempts to navigate a very fine line. With valuations already elevated in many areas of the growth space, all else equal, a decrease in interest rates would likely cause further upward pressure on multiples, potentially dampening any positive market reaction to this more accommodating environment.

While deteriorating trends in consumer spending and the ramifications for economic growth are somewhat worrisome, our biggest fear is the potential reignition of inflationary pressures. The last thing the Fed wants is to get into a situation where it begins to cut interest rates only to have inflationary pressures reemerge later, forcing it to raise rates again. A complicating factor is the increasing probability of a Donald Trump presidency. While it remains early in the presidential race, if Trump were to win and follow through on his proposed plans to raise tariffs, that could reignite inflation in 2025.

Political and economic factors aside, the narrative around AI is likely to dictate the direction of markets in the near term, with the biggest risk being a deterioration in demand for graphics processing units, which remains to be seen. On the flip side, a step function increase in capability to address additional use cases could very well maintain or even accelerate the momentum we have seen behind AI over the past year and a half.

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately volatile.

The SRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRI score is based on the highest score among all classes of the fund.

Lower risk ← Higher risk
Potentially lower reward Potentially higher reward

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a diversified portfolio of shares from large capitalisation companies in the United States that, in the opinion of the investment manager, are undervalued relative to their historical average and/or the average of their industries.

Specifically, the fund invests at least 70% of total assets in shares and related securities of companies that are either incorporated in the United States of America or conduct most of their business there and that have a market capitalisation equal to or greater than the companies in the Russell 1000 Index. Types of securities may include common stocks, preferred stocks, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund does not invest more than 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager’s approach is to:

- Focus on relative value relationships.
- Employ fundamental research to identify companies with improving financial outlook.
- Integrate qualitative inputs to assess potential for improved investor perception.

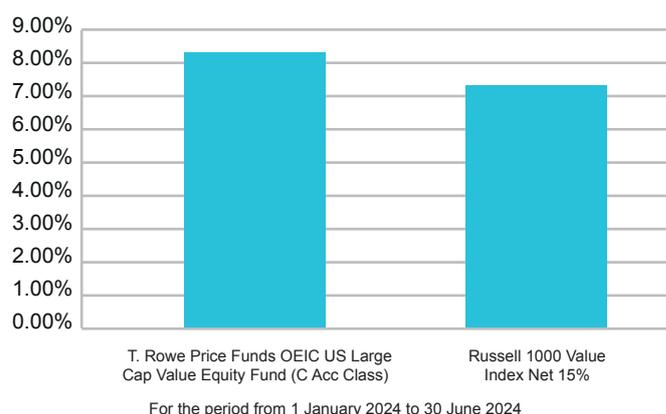

- Verify relative valuation anomalies through quantitative analysis.
- Balance valuation analysis and qualitative assessment.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund’s portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The US Large-Cap Value Equity Fund recorded an absolute gain and outperformed the Russell 1000 Value Net 15% Index in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund’s performance?

US stocks advanced in a volatile first half of the year. Strong earnings and artificial intelligence (AI)-driven excitement initially supported markets before they slumped in April due to inflation and geopolitical concerns. However, stocks rebounded in May on weaker labour market and inflation data, renewing optimism for interest rate cuts later in the year.

T. Rowe Price Funds OEIC US Large Cap Value Equity Fund continued

Within the portfolio, favourable stock selection in the information technology (IT) sector contributed the most to relative performance. Our financial stock holdings also added value. Conversely, security selection in industrials and business services and health care detracted.

- Qualcomm was a notably strong performer in the IT sector, as shares of the chipmaker benefitted from a cyclical recovery in handset demand. Most recently, management reported earnings that reflected stronger fundamental positioning and offered positive data points on long-term growth opportunities, which was encouraging. Qualcomm leads in wireless connectivity technology, and we believe the market underappreciates the chipmaker's potential for improved topline and incremental margin as it continues to focus its product offerings in higher-growth end markets such as automotive and Internet of Things.
- Within financials, our position in Hartford Financial Services added value amid a rising property and casualty upcycle that contributed to the insurance underwriter reporting excellent quarterly results, driven by robust premium growth and improved underwriting margins. We consider Hartford Financial Services to be a high-quality business with an attractive valuation, a strong balance sheet and a globally diversified book of business that has historically performed well.
- In contrast, our position in Stanley Black & Decker led relative detractors within the industrials and business services sector. Shares of the toolmaker contended with cyclically-depressed fundamentals amid higher interest rates and mixed demand trends that negatively impacted the company and its home improvement peers. We appreciate Stanley Black & Decker's collection of solid brands and believe the company's efforts to improve and streamline its portfolio will prove beneficial to the business and its shares.
- Within health care, our position in CVS Health dragged. In the latter half of the period, the stock was pressured after the company reported a worse-than-expected earnings miss and downward guidance driven by Medicare Advantage (MA) medical cost trends and some isolated missteps

in its health benefits segment. While a number of recent negative developments have presented material headwinds to earnings in the near term, we continue to find value in the company's leading MA franchise and its management team.

How is the fund positioned?

The range of potential outcomes from the current environment continues to be abnormally wide, in our view. During the half-year period, we reviewed each stock within the portfolio to reassess our investment theses and identify opportunities to reevaluate the risk/reward balance of our positions. We maintain a consistent investment process, driven by valuation and rooted in fundamental insight, and we believe adhering to this approach will benefit our shareholders over the long term.

- We increased our absolute and relative overweight exposure to the health care sector, one of the largest allocations within the portfolio. For instance, we began investing in UnitedHealth Group, the largest health insurer in the US. We believe the company's multiple scaled businesses, including Medicare Advantage and OptumHealth, have an underappreciated runway for growth remaining and the potential to develop nascent growth drivers over the next decade.
- In the industrials and business services sector, we modestly increased our absolute exposure and maintained our relative overweight versus the benchmark. Within the sector, we added to global diversified industrial company Honeywell International. In our view, the company has a technologically differentiated portfolio that should benefit it through a variety of market conditions. Further, we believe that the company's organic growth should stabilise and reaccelerate and that idiosyncratic advantages will provide additional support to earnings growth in the coming years.
- Our absolute exposure to consumer staples was consistent overall, and we remained overweight relative to the benchmark. Here, we added to our position in consumer health company Kenvue, which we believe has room for operation improvement, margin expansion and free cash flow conversion.

QUALCOMM, Inc.	Information Technology	1.94

What is portfolio management's outlook?

The unpredictability of the current landscape continues to present a wide range of possible outcomes for the US economy and stock market, and we are carefully monitoring several events on the horizon that could potentially influence the market. The upcoming US presidential election is a particular focus. If the incumbent party wins, we expect minimal change in the direction of the market. A victory for the challenger, however, could affect a variety of industries, including financials, energy and health care. We are also closely watching the US Federal Reserve (Fed) and inflation trends. There has been meaningful progress in bringing down inflation, and we believe that the Fed is inclined to cut interest rates if supported by inflation data, a move that could have a notable impact on the market, at least in the short term. Additionally, in the event that the economy weakens, the Fed has significant scope to help shorten and soften a potential downturn.

Given this backdrop, we do not believe it would be prudent to take an overly defensive or aggressive stance within the portfolio. We will continue to seek to create a balanced portfolio that is positioned to perform well independent of a particular economic or market outcome. While our outlook for the market is one of cautious optimism, we believe the setup is favourable for the value universe, where there are lower expectations for fundamentals and lower valuations. Ultimately, we remain confident that our valuation focus and long-term orientation will benefit our clients over a full market cycle.

T. Rowe Price Funds OEIC US Large Cap Value Equity Fund continued

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

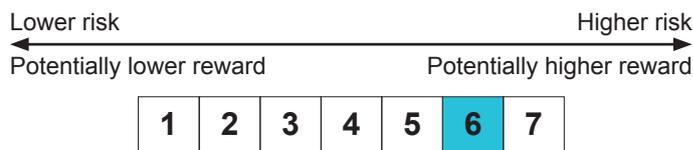

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market that is moderately volatile.

The SRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRI score is based on the highest score among all classes of the fund.

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

*Interim distribution for the three months ended 30 June 2024***Group 1** Shares purchased prior to 1 April 2024**Group 2** Shares purchased on or after 1 April 2024

	Net revenue p per share	Equalisation p per share	Distribution payable 31.08.24 p per share	Distribution payable 31.08.23 p per share
C Inc Q 9 shares				
Group 1	5.103408	–	5.103408	6.460663
Group 2	3.690820	1.412588	5.103408	6.460663

Equalisation applies to shares purchased during the distribution period (Group 2 shares). It is the average amount of revenue included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital.

Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

T. Rowe Price Funds OEIC US Smaller Companies Equity Fund

FUND INFORMATION

Investment objective

To increase the value of its shares through growth in the value of its investments.

Investment policy

The fund is actively managed and invests mainly in a widely diversified portfolio of shares from smaller capitalisation companies in the United States.

Specifically, the fund invests at least 70% of total assets in shares and related securities of companies that are either incorporated in the United States of America or conduct most of their business there and that, at the time of purchase, have a market capitalisation that is equal to or smaller than the companies in the Russell 2500 Index. Types of securities may include common stocks, preferred stocks, warrants, American Depository Receipts (ADRs), European Depository Receipts (EDRs) and Global Depository Receipts (GDRs).

The fund does not invest more than 30% of its assets in debt and money market securities.

Derivatives and techniques

The fund may use derivatives for hedging and efficient portfolio management.

At any time and for a length of time that the investment manager considers appropriate, the fund may hold up to (but not including) 50% of its assets in cash or other liquid assets. This might occur in circumstances of extremely adverse market conditions and/or upon receipt of significant subscriptions by the fund.

Investment process

The investment manager's approach is to:

- Assess valuations using sector/industry metrics, such as absolute and relative price as compared to earnings, cash flow and assets.
- Integrate fundamental research, seeking to discover underfollowed companies possessing clear business plans, financial flexibility, and proven management teams.
- Identify potential “value creation” catalysts.

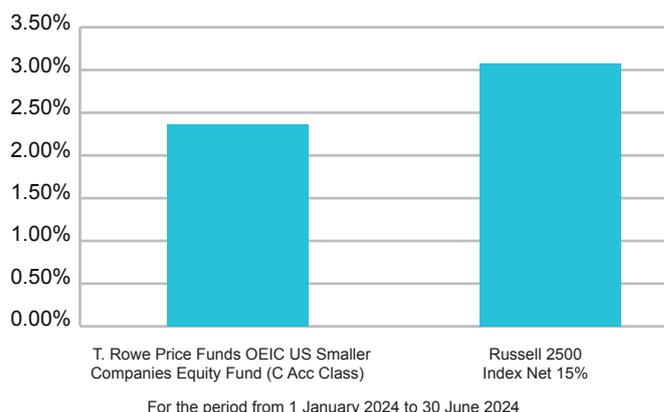

- Employ a patient trading strategy to promote full value realisation.
- Assess environmental, social and governance (“ESG”) factors to identify those considered most likely to have a material impact on the performance of the holdings or potential holdings in the fund's portfolio. These ESG factors, which are incorporated into the investment process alongside financials, valuation, macroeconomics and other factors, are components of the investment decision. Consequently, ESG factors are not the sole driver of an investment decision but are instead one of several important inputs considered during investment analysis.

FUND COMMENTARY

How did the fund perform in the past six months on an absolute basis and versus the benchmark?

The US Smaller Companies Equity Fund recorded a small absolute gain but underperformed the Russell 2500 Index Net 15% in the six-month period ended 30 June 2024.

Fund Performance vs Benchmark Chart

What factors influenced the fund's performance?

US stocks rose in the first half of 2024, adding to 2023's brisk gains and lifting some indices to all-time highs. Although inflation remained somewhat elevated — which discouraged Federal Reserve (Fed) policymakers from reducing short-term interest rates — the equity market was boosted by generally favourable corporate earnings and by strong investor interest in companies expected to benefit from artificial intelligence (AI) developments.

T. Rowe Price Funds OEIC US Smaller Companies Equity Fund

continued

Large- and mega-cap stocks strongly outperformed small- and mid-cap shares. At the portfolio level, our holdings in industrials and business services and health care detracted on a relative basis, while stock selection in materials added value.

- Stock selection in industrials and business services, notably our holdings in ground transportation, held back relative results against a challenging industry backdrop. Shares of logistics solutions company J.B. Hunt Transport Services fell amid a tough pricing and competitive environment and its most recent quarterly results fell short of lowered expectations. Less-than-truckload company Old Dominion Freight Line reported in-line quarterly results, but its shares pulled back, likely due to comments suggesting the recovery in freight is still moving slowly. We continue to favour the company for its best-in-class management team and premium product offering.
- Health care also weighed on returns due to our stock choices. Shares of health care equipment company QuidelOrtho plunged amid quarterly results that came in well below expectations, driven primarily by weaker-than-anticipated revenues in the firm's respiratory business. Shares were further pressured due to institutional investors selling the name later in the period.
- On the positive side, stock selection in materials added value. Favourable investor reaction to merger and acquisition news boosted the shares of International Paper. Late in the period, reports that Brazilian paper and pulp producer Suzano was seeking to acquire International Paper sent the share price higher. However, Suzano announced it would ultimately not pursue the acquisition in the final days of June, which pared back some of the gains. The failed takeover bid does not alter our investment thesis. We like International Paper's new CEO, who has a strong track record, and the opportunity for margin expansion given a rising cost curve and a greater focus on cost discipline. Hubday Minerals is a mining company that produces copper concentrate, molybdenum concentrate and zinc metal. Its shares climbed higher for much of the period, supported by back-to-back quarterly results that beat expectations, driven by higher-

than-anticipated gold production and investors' enthusiastic reception to the company's three-year production guidance. We believe Hubday Minerals will benefit from a favourable copper backdrop and its improving portfolio of assets.

How is the fund positioned?

Industrials and business services, financials, information technology, health care and consumer discretionary remain the dominating sectors in the portfolio, all with greater than 10% of the equity allocation. During the first half of the year, we continued to find select opportunities within names across various industries where we feel valuations may underestimate the sustainability of growth or turnaround potential within the company. We found compelling ideas across the industries, with the top buys including companies in household durables and containers and packaging, while the largest sales were positions in machinery.

- We initiated a position in Taylor Morrison Home, a residential homebuilder. We like the company's balanced portfolio serving consumers seeking entry-level, move-up, and resort properties and its potential to grow via expansion in existing markets and M&A-enabled penetration in new markets.
- Sealed Air is a materials science and packaging solutions company specialising in food care and product protection. We opened a position as we like the company's management team and solid exposure to secular growth markets like e-commerce and fresh protein packaging. We believe a new focus on cost and operating leverage can drive organic earnings growth.
- We eliminated our stake in SPX Technologies, a supplier of infrastructure equipment via its Heating, Ventilation, and Air Conditioning (HVAC) and Detection and Measurement segments, following strong share price appreciation on valuation considerations.
- Alamo Group manufactures agricultural, infrastructure maintenance and forestry equipment. While we maintain a favourable long-term view, we expect end market weakness, exacerbated by higher interest rates and inflation, to persist and we exited the position.

What is portfolio management's outlook?

During the review period, we witnessed a relatively unhealthy market, reflected by significant market concentration, strong price reactions to modest earnings surprises and a disconnect between the broad market and single-stock volatility. There were few areas of the market outside of AI and parts of the technology sector that showed fundamental strength. Additionally, the economy remains choppy as the Fed received mixed macroeconomic data throughout the period and decided to hold interest rates steady, delaying the much-desired cuts the market had priced in earlier this year.

Despite these headwinds, we are finding opportunities to invest in companies with attractive business models and durable long-term growth capabilities that have fallen out of favour in this narrow market environment. While we take macroeconomic factors into consideration, they do not drive portfolio construction, and we maintain our focus on long-term investment outcomes while working closely with our experienced team of investment professionals to identify the most attractive opportunities across the full range of the small-cap and mid-cap segments of the US equity market.

T. Rowe Price Funds OEIC US Smaller Companies Equity Fund continued

The net asset value and, therefore, the net asset value per share, may include post year end accounting adjustments. As a result the net asset value per share above may differ to the prices released as at 30 June 2024.

Operating charges include payments made to the ACD and to providers independent of the ACD:

- Investment management: Charge paid to the ACD for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid for administration services.
- Oversight and other independent services: Charges paid to providers independent of the ACD for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the Comparative Tables above. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of each share class may differ, and therefore the operating charges may differ.

RISK AND REWARD PROFILE (UNAUDITED)

The fund's risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile. The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the fund may shift over time. The lowest category does not mean a risk-free investment. The fund is in the category shown because it invests in a segment of the market where volatility is moderately high.

The SRRI score is based on the limited period of time since inception and may vary between different share classes. The SRRI score is based on the highest score among all classes of the fund.

Lower risk ← Higher risk
Potentially lower reward Potentially higher reward

The value of an investment in the fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.

The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the fund's share price over five years).

The fund's risk level reflects the following:

- As a class, stocks carry higher risks than money market securities and bonds.

Opening net assets attributable to shareholders		217,620		175,802
Amounts receivable on issue of shares	106,170		40,623	
Amounts payable on cancellation of shares	(18,777)		(18,911)	
		87,393		21,712
Dilution adjustment		54		7
Change in net assets attributable to shareholders from investment activities (see above)		5,437		12,306
Closing net assets attributable to shareholders		310,504		209,827

The Statement of Recommended Practice (2014) requires that comparatives are shown for the above report. As the comparatives are for the previous interim period, the net assets at the end of that period will not agree to the net assets at the start of the current period. The published net asset value as at 31 December 2023 was £217,620,262.

* due to the effect of income equalisation on subscriptions and redemptions.
