OBJECTIVE AND INVESTMENT POLICY

Objective

To grow capital over a five year period.

There is no guarantee that the fund will achieve a positive return over a five-year period or any other time period and your capital is at risk.

Investment policy

What the fund invests in

- At least 80% in shares of US companies, either directly or indirectly through derivatives.
- Up to 20% in shares, or derivatives of shares, of companies in other countries, bonds, cash, near cash, other transferable securities, other funds (up to 10%) managed by Artemis and third party funds, and money market instruments.

Use of derivatives

The fund may use derivatives:

- for investment purposes to achieve the fund objective, including taking long and short positions
- to produce additional income or growth
- for efficient portfolio management purposes to reduce risk and manage the fund efficiently
- to create leverage.

Industries the fund invests in

- Any

Other limitations specific to this fund

- Total derivatives (longs plus shorts) are likely to represent a significant proportion of the fund's gross exposure to companies, which will typically lie in a range of +100% to +200% of net asset value.
- Net exposure (longs minus shorts) to companies will typically lie in the range of +85% to +110% depending on market conditions.
- A significant proportion of the fund will be held in cash due to the level of derivative use.
- To allow the fund to manage counterparty risk, it may also invest its cash in government bonds, generally of less than one year maturity.

Investment strategy

- The fund is actively managed.
- The manager uses multiple sources of information, both to generate ideas and to assist in validating and testing candidate companies for investment. This is complemented by techniques such as data mining (examining large databases of information) and financial analysis.
- External research is also used in order to tap into knowledge already available and to look for different views.
- The manager carries out a significant amount of analysis of wider economic trends is carried out in order to understand cyclical and long-term trends and the outlook.
- The manager derives alpha by seeking to exploit market inefficiencies by buying shares in companies believed to be undervalued and by shorting shares believed to be overvalued.

Benchmarks

- S&P 500 TR
A widely-used indicator of the performance of 500 large publicly-traded US companies, some of which the fund invests in. It acts as a 'comparator benchmark' against which the fund's performance can be compared. Management of the fund is not restricted by this benchmark.
- IA North America NR
A group of other asset managers' funds that invest in similar asset types as this fund, collated by the Investment Association. It acts as a 'comparator benchmark' against which the fund's performance can be compared. Management of the fund is not restricted by this benchmark.

RISK CONSIDERATIONS

To ensure you understand whether this fund is suitable for you, please read the Key Investor Information which is available, along with the fund's Prospectus, from www.artemisfunds.com or www.fundinfo.com.

The fund is exposed to the following risks:

Market volatility risk	The value of the fund and any income from it can fall or rise because of movements in stockmarkets, currencies and interest rates, each of which can move irrationally and be affected unpredictably by diverse factors, including political and economic events.
Currency risk	The fund's assets may be priced in currencies other than the fund base currency. Changes in currency exchange rates can therefore affect the fund's value.
Derivatives risk	The fund may invest in derivatives with the aim of profiting from falling ('shorting') as well as rising prices. Should the asset's value vary in an unexpected way, the fund value will reduce.
Cash risk	The fund may hold a large amount of cash. If it does so when markets are rising, the fund's returns could be less than if the cash was fully invested in other types of assets.
Leverage risk	The fund may operate with a significant amount of leverage. Leverage occurs when the economic exposure created by the use of derivatives is greater than the amount invested. A leveraged portfolio may result in large fluctuations in its value and therefore entails a high degree of risk including the risk that losses may be substantial.
