Risk and Reward Profile

The above rating is based on the historic volatility of the simulated Net Asset Value of this Share Class over the last five years and may not be a reliable indication of the future risk profile of this Share Class.

The risk and reward category shown above is not guaranteed to remain unchanged and may change over time.

A Share Class with the lowest risk rating does not mean a risk-free investment.

Why is this Share Class in this category? This Share Class is classified in category 6 because its simulated Net Asset Value has shown high fluctuations historically.

OTHER MATERIAL RISKS

- The value of your investment may fall as well as rise and you may get back less than you originally invested.
- The value of Equity and Equity-Linked Securities held in the underlying funds may fluctuate in response to the performance of individual companies and general market conditions.
- The Fund may use Financial Derivative Instruments (derivatives) and/or forward transactions for investment purposes. The value of derivatives can be volatile. This is because a small movement in the value of the underlying asset can cause a large movement in the value of the derivative and therefore, investment in derivatives may result in losses in excess of the amount invested by the Fund.
- The value of Bonds and other Debt Securities may change significantly depending on market, economic and interest rate conditions as well as the creditworthiness of the issuer. Issuers of Bonds and other Debt Securities may fail to meet payment obligations (default) or the credit rating of Bonds and other Debt Securities may be downgraded. These risks are typically increased for Below Investment Grade and certain Unrated securities, which may also be subject to higher volatility and be more difficult to sell than Investment Grade securities.
- Emerging Markets may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency and greater financial risks. Emerging Market currencies may be subject to volatile price movements. Emerging Market securities may also be subject to higher volatility and be more difficult to sell than non-Emerging Market securities.
- Investments in companies engaged in the business of real estate may be subject to increased liquidity risk and price volatility due to changes in economic conditions and interest rates.
- The Fund's asset allocation is actively managed. There is a risk that the performance of the Fund will suffer if the allocation to any particular asset class is low when that asset class is outperforming or high when that asset class is underperforming.
- Further information about risks can be found in "Part 11: Risk Warnings" of the Prospectus.
