RISK AND REWARD PROFILE

Lower Risk			Higher Risk			
Typically lower rewards			Typically higher rewards			
1	2	3	4	5	6	7

The risk and reward indicator table demonstrates where the Fund will rank in terms of potential risk and return. Typically, the higher the rank, the greater the potential reward but also the greater the risk of losing money.

The lowest risk category does not mean risk free. It is based upon how the investments which the Fund will hold have performed in the past and the Fund may well perform differently in the future. Historical data may not be a reliable indication for the future. The shaded area shows the Fund’s ranking on the risk and reward indicator.

The risk category is not guaranteed and may shift over time. It is based on a standard calculation method that is used by all UCITS funds.

The following are risks materially relevant to the Fund which are not adequately captured by the indicator:

- The value of securities may go down as well as up, depending on the performance of companies and general market conditions.

- The value at which securities in certain companies can be liquidated may differ, sometimes significantly, from the interim valuations.
- Investment in securities of certain companies may be less liquid, more volatile and subject to greater risks than securities of other companies.
- Investment in emerging markets may increase the volatility of the Fund’s Net Asset Value, and accordingly, an investment in the Fund’s Shares may be worth more or less on redemption than their original purchase value.
- As the Fund may invest in FDIs, such as swaps, it may lose more than the amount invested in such FDIs.
- The Fund is subject to both internal operational risks (including the risk that inadequacies or failures in information systems, processes or internal controls, human errors or management failures may result in losses) and external operational risks (including the risk that changes in regulatory, fiscal, political and legal environments may result in losses).
- The Fund’s base currency is the Euro. Investors in shares denominated in another currency may be affected by changes in currency movements.

For full details of the relevant risks reference should be made to the risk factors sections of the Prospectus and Supplement.
