

## Strategy, Objective And Investment Policy

**Strategy:** The fund invests primarily in sterling denominated investment grade corporate bonds. The fund seeks to generate attractive income with lower volatility compared to other asset classes such as equities and property. Emphasis is put on bottom up issuer selection and ensuring adequate diversity due to the asymmetric nature of corporate bond returns. The manager has flexibility to invest in out-of-index strategies as a means of adding performance but adherence to the investment objective remains imperative. The fund is managed according to Fidelity's active philosophy and approach to fixed income investing. This is team-based, but led by the Portfolio Manager to generate attractive risk-adjusted returns through combining multiple, diversified investment positions advised by in-house fundamental credit research, quantitative modelling and specialist traders.

**Objective:** The fund aims to deliver an income with the potential to increase the value of your investment.

**Investment Policy:** The Fund will be at least 70% exposed to sterling-denominated (or hedged back to sterling) investment grade debt instruments. The Fund may also obtain exposure to transferable securities, money market instruments, collective investment schemes, cash and near cash and deposits. Derivatives may be used for efficient portfolio management and investment purposes.

## Fund And Share Class Facts

<b>Fund launch date:</b>	12.09.95
<b>Portfolio manager:</b>	Kris Atkinson, Shamil Gohil
<b>Appointed to fund:</b>	01.01.19, 01.03.23
<b>Years at Fidelity:</b>	25, 2
<b>Fund size:</b>	£ 1,368m
<b>Fund reference currency:</b>	UK Sterling (GBP)
<b>Fund domicile:</b>	United Kingdom
<b>Fund legal structure:</b>	OEIC
<b>Management company:</b>	FIL Investment Services (UK) Limited
<b>Capital guarantee:</b>	No
<b>Share class launch date:</b>	05.10.09
<b>NAV price in share class currency:</b>	0.979695
<b>Share class ISIN:</b>	GB00B3Z9PT62
<b>Share Class SEDOL:</b>	B3Z9PT6
<b>Bloomberg:</b>	FIDMBNY LN
<b>Dealing cut-off:</b>	12:00 UK time
<b>Distribution type:</b>	Income
<b>Distribution frequency:</b>	Monthly
<b>Charges made to income or capital:</b>	Capital
<b>Ongoing Charges Figure (OCF) per year:</b>	0.55% (Estimated)
<b>OCF takes into account annual management charge per year:</b>	0.40%
<b>Peer Group Universe:</b>	Morningstar IA GBP Corporate Bond
<b>Market index from 01.05.17:</b>	ICE BofA Euro-Sterling Index

Other share classes may be available. Please refer to the prospectus for more details.

## Share Class Risk and Reward Profile

For full risk details please consult the KID.

## Performance

Past performance does not predict future returns. The fund's returns may increase or decrease as a result of currency fluctuations. Market index is for comparative purposes only unless specifically referenced in the Objectives & Investment Policy. The same index is used in the positioning tables on this factsheet. Index performance shown in the charts below prior to the effective date of the current index ( see Fund & Share Class Facts section) relates to the previous index/indices used. Further details on these indices may be found in the annual reports and accounts.

### Performance for calendar years in GBP (%)

	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024
Fund	-0.5	8.7	4.9	-2.4	9.7	7.7	-1.4	-19.3	9.1	2.4
Index	-0.1	9.7	4.1	-1.6	9.5	8.0	-3.0	-17.7	8.6	1.7

### Performance for 12 month periods in GBP (%)

May	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025
May	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	
Fund	2.2	8.7	-0.3	4.0	5.1	4.2	-8.7	-10.0	7.6	5.1	
Index	2.5	8.8	0.0	4.3	6.4	2.3	-9.8	-8.5	7.4	4.5	

### Cumulative performance in GBP (rebased to 100)

Performance is shown for the last five years (or since launch for funds launched within that period).

The performance figures above include performance prior to the repurpose of the fund on 26 May 2022 from the legacy Fidelity Investment Funds - MoneyBuilder Income Fund. Before this date the performance was achieved in circumstances that no longer apply. Source of fund performance and volatility and risk measures is Fidelity. Performance is excluding initial charge. Basis: bid-bid with income reinvested, in GBP, net of fees. Market indices are sourced from RIMES and other data is sourced from third-party providers such as Morningstar. The investment which is promoted concerns the acquisition of units or shares in a fund, and not in a given underlying asset owned by the fund.

## Important Information

The value of your investment may fall as well as rise and you may get back less than you originally invested. The investment policy of this fund means it can be more than 35% invested in Government and public securities. These can be issued or guaranteed by other countries and Governments. For a full list please refer to the fund's prospectus. This fund uses financial derivative instruments for investment purposes, which may expose the fund to a higher degree of risk and can cause investments to experience larger than average price fluctuations. There is a risk that the issuers of bonds may not be able to repay the money they have borrowed or make interest payments. When interest rates rise, bonds may fall in value. Rising interest rates may cause the value of your investment to fall. The investment policy of this fund means it can be more than 35% invested in transferable securities and money market instruments issued or guaranteed by an EEA State, one or more of its local authorities, a third country or a public international body to which one or more EEA States belongs. Please refer to the Prospectus and KIID of the fund before making any final investment decisions.

Performance to 31.05.25 in GBP (%)

	1m	3m	YTD	1yr	3yr	5yr	Since 05.10.09*

Total number of funds	90	90	90	90	87	83	
Quartile ranking**	4	2	3	3	4	3	

\*Performance commencement date.

\*\*Quartile rank is for the fund's primary share class as identified by Morningstar, which may be different than the share class detailed in this factsheet and refers to performance over time rated on a scale of 1-4. A ranking of 1 indicates that the item being ranked is in the top 25% of the sample and so on. Rankings are based on a performance record that is included in the Peer Group Universe. In line with Investment Association methodology, this record may include a track record extension from a legacy share class and the record may not be the same class of this factsheet. Quartile ranking is an internal Fidelity International calculation. Ranking may vary by share class.

Volatility & Risk (3 years)

Annualised Volatility: fund (%)	8.77	Annualised Alpha	-0.31
Relative volatility	0.98	Beta	0.96

Glossary / additional notes

**Portfolio Turnover Rate (PTR=117.17%) and Portfolio Turnover Cost (PTC=0.00%), where shown:** SRDII does not define a methodology for these values; ours is as follows: **PTR** = (purchases of securities + sales of securities) minus (subscriptions of units + redemptions of units), divided by average fund value over the prior 12 months multiplied by 100. Any funds' trading in Fidelity Institutional Liquidity Funds is excluded from the PTR calculation. **PTC** = PTR (capped at 100%) x transaction cost, where transaction cost is calculated as ex-post (i.e. prior 12 months) MiFID disclosure of portfolio transaction costs minus implicit costs.

**Annualised volatility:** a measure of how variable returns for a fund or comparative market index have been around their historical average (also known as "standard deviation"). Two funds may produce the same return over a period. The fund whose monthly returns have varied less will have a lower annualised volatility and will be considered to have achieved its returns with less risk. The calculation is the standard deviation of 36 monthly returns presented as an annualised number. Volatility for funds and indices are calculated independently of each other.

**Relative volatility:** a ratio calculated by comparing the annualised volatility of a fund to the annualised volatility of a comparative market index. A value greater than 1 indicates the fund has been more volatile than the index. A value less than 1 shows the fund has been less volatile than the index. A relative volatility of 1.2 means the fund has been 20% more volatile than the index, while a measure of 0.8 would mean the fund has been 20% less volatile than the index.

**Sharpe ratio:** a measure of a fund's risk-adjusted performance, taking into account the return on a risk-free investment. The ratio allows an investor to assess whether the fund is generating adequate returns for the level of risk it is taking. The higher the ratio, the better the risk-adjusted performance has been. If the ratio is negative, the fund has returned less than the risk-free rate. The ratio is calculated by subtracting the risk-free return (such as cash) in the relevant currency from the fund's return, then dividing the result by the fund's volatility. It is calculated using annualised numbers.

**Annualised alpha:** the difference between a fund's expected return (based on its beta) and the fund's actual return. A fund with a positive alpha has delivered more return than would be expected given its beta.

**Beta:** a measure of a fund's sensitivity to market movements (as represented by a market index). The beta of the market is 1.00 by definition. A beta of 1.10 shows that the fund could be expected to perform 10% better than the index in up markets and 10% worse in down markets, assuming all other factors remain constant. Conversely, a beta of 0.85 indicates that the fund could be expected to perform 15% worse than the market return during up markets and 15% better during down markets.

**Annualised tracking error:** a measure showing how closely a fund follows the index to which it is being compared. It is the standard deviation of the fund's excess returns. The higher the fund's tracking error, the higher the variability of fund returns around the market index.

**Information ratio:** a measure of a fund's effectiveness in generating excess return for the level of risk taken. An information ratio of 0.5 shows the fund has delivered an annualised excess return equivalent to half the value of the tracking error. The ratio is calculated by taking the fund's annualised excess return and dividing it by the fund's tracking error.

**R<sup>2</sup>:** a measure representing the degree to which a fund's return can be explained by the returns of a comparative market index. A value of 1 signifies the fund and index are perfectly correlated. A measure of 0.5 means only 50% of the fund's performance can be explained by the index. If the R<sup>2</sup> is 0.5 or lower, the fund's beta (and therefore its alpha too) is not a reliable measure (due to a low correlation between fund and index).

#### Ongoing charges

The ongoing charges figure represents the charges taken from the fund over a year. It is calculated at the fund's financial year end and may vary from year to year. For classes of funds with fixed ongoing charges, this may not vary from year to year. For new classes of funds or classes undergoing corporate actions (eg amendment to annual management charge), the ongoing charges figure is estimated until the criteria are met for an actual ongoing charges figure to be published.

The types of charges included in the ongoing charges figure are management fees, administration fees, custodian and depositary fees and transaction charges, shareholder reporting costs, regulatory registration fees, Directors fees (where applicable) and bank charges.

It excludes: performance fees (where applicable); portfolio transaction costs, except in the case of an entry/exit charge paid by the fund when buying or selling units in another collective investment undertaking.

For more information about charges (including details of the fund's financial year end), please consult the charges section in the most recent Prospectus.

**Primary share class:** is identified by Morningstar when the analysis calls for only one share class per fund to be in the peer group. It is the share class Morningstar recommends as the best proxy for the portfolio for the relevant market and category/GIF combination. In most cases the share class chosen will be the most retail version (based upon actual management charge, inception date, distribution status, currency and other factors) unless a share class that is less retailed focused has a much longer track record. It is different to the oldest share class data point in that it is on an available for sale level and not all markets will have the oldest share class for sale in that region. The Primary share class is also based on category so each available for sale/category combination for the fund will have its own primary share class.

Duration includes the effect of interest rate derivatives such as government bond futures, inflation swaps and interest rate swaps. Nominal Fund refers to the sensitivity to nominal yields, whereas Real Fund refers to the sensitivity to inflation-linked / real yields.

Investors in hedged classes have opted not to have the currency exposure shown in the table, but instead to have c100% exposure to the dealing currency. The table still provides information on the fund's underlying investments.

Top long exposures are those bond issuers that reflect the largest percentage of the fund's total net assets. The effect of credit derivatives is included where the reference entity is a specific bond issuer. Government bond futures and index credit default swaps are excluded.

Where bonds are issued by different entities within the same corporate group/complex, the aggregated exposure may not be reflected in the data above.

For ratings breakdown, worst of the two best ratings from across S&P, Moody's and Fitch is applied (commonly known as the Basel method).

#### Portfolio Characteristics

##### Characteristics calculation

Unless stated otherwise Portfolio level characteristics have been aggregated by weighting across all asset classes. This includes applying exposure to Equity, Preferred, and Defaulted securities. These securities have zero assigned for Yield, OAS, Duration, Maturity Date, and Coupon.

#### Distribution Yield (%)

The Distribution Yield reflects the amounts that may be expected to be distributed over the next twelve months as a percentage of the mid-market unit price of the fund as at the date shown and is based on a snapshot of the portfolio on that day. It includes the fund's ongoing charges but does not include any preliminary charge and investors may be subject to tax on distributions.

#### Effective Duration

Duration is a measure of sensitivity of the fund value to changes in interest rates.

Effective duration is a duration calculation for bonds with embedded options (such as a call or a put option). It takes into account that expected cash flows will fluctuate as interest rates change and affect a bond's price.

The effective duration of a fund is calculated by a market weighted sum of the effective duration of each individual instrument. The effect of derivatives such as bond futures and interest rate swaps are included in the calculation.

#### Spread Duration

The sensitivity of the price of a bond to a change in its Option Adjusted Spread.

#### Duration Times Spread (DTS)

DTS is a measure of credit risk sensitivity that utilises credit spread and credit spread duration based on current market valuations. It is superior to spread duration as a standalone measure of credit risk because it recognises that securities with a higher spread tend to experience greater spread changes. The portfolio's DTS is the value weighted sum of the DTS of each individual instrument.

#### Number of Holdings

The number of bonds and derivatives held in the fund. Where the fund invests in another fund, it is counted as one holding. FX (foreign exchange) forwards are excluded. These are forward contracts that allow currency to be bought or sold at an agreed price on a future date.

#### Underlying Yield (%)

The Underlying Yield is shown because this fund distributes coupon\* income and this will constrain the fund's capital performance. The Underlying Yield is the amount of income per year that could be paid to investors without eroding the fund's capital value. It is lower than the Distribution Yield because any capital losses that would occur at redemption on bonds purchased above their face value are reflected in the calculation. The Underlying Yield is net of the fund's ongoing charges but does not include any entry charge. The Underlying Yield is gross of tax and investors may be subject to tax on distributions.

\*The coupon is the interest rate stated on a bond when it is issued.

**Weighted Average Life:** The weighted average life (WAL) is the average length of time that each euro of unpaid principal on a loan, a mortgage or an amortizing bond remains outstanding.

**Discount Margin:** A discount margin (DM) is the average expected return earned in addition to the index underlying, or reference rate of, the floating rate security.

#### Important Information

This is a marketing communication. This information must not be reproduced or circulated without prior permission.

Fidelity only offers information on products and services and does not provide investment advice based on individual circumstances, other than when specifically stipulated by an appropriately authorised firm, in a formal communication with the client.

Fidelity International refers to the group of companies which form the global investment management organisation that provides information on products and services in designated jurisdictions outside of North America. This communication is not directed at, and must not be acted upon by persons inside the United States and is otherwise only directed at persons residing in jurisdictions where the relevant funds are authorised for distribution or where no such authorisation is required.
