Regarding the Distribution of the SICAV in Sweden

Some tasks of facilities agent are provided in Sweden by AXA Investment Managers Deutschland GmbH, Thurn-und-Taxis-Platz 6, 60313 Frankfurt am Main, Deutschland.

As at 31 December 2023, all Sub-Funds are registered in Sweden.

Regarding the Distribution of the SICAV in Switzerland

The Full Prospectus and the KIDs as well as the Articles of Association of the SICAV, the annual and semi-annual reports and the list of changes in the portfolios during the reference period can be obtained free of charge at the registered office of the Swiss Representative in Zurich which is:
 First Independent Fund Services S.A., Feldeggstrasse 12, 8008 Zurich.

Until 30 November 2023, the Swiss Paying Agent was Credit Suisse Ltd, Paradeplatz 8, CH-8001 Zurich, Switzerland.

As from 1 December 2023, the Swiss Paying Agent is NPB Neue Privat Bank AG, Limmatquai 1, 8001 Zurich, Switzerland.

As at 31 December 2023, all Sub-Funds are registered in Switzerland.

Regarding the Distribution of the SICAV in Taiwan

The representative in Taiwan is Capital Gateway Securities Investment Consulting Enterprise 9F, No.171, Sung-De Rd., Taipei City 110, Taiwan, R.O.C.

As at 31 December 2023, the following Sub-Funds are registered in Taiwan:

AXA World Funds - ACT Clean Economy
 AXA World Funds - Digital Economy (note 1b)
 AXA World Funds - Emerging Markets Responsible Equity QI (note 1b)
 AXA World Funds - Europe Real Estate (note 1b)
 AXA World Funds - Europe Small Cap (note 1b)
 AXA World Funds - Optimal Income
 AXA World Funds - US High Yield Bonds

Foreign Distribution

Regarding the Distribution of the SICAV in the United Kingdom

The facilities, marketing and sales agent in the United Kingdom is AXA Investment Managers UK Ltd., 22 Bishopsgate, London EC2N 4BQ United Kingdom.

As at 31 December 2023, all Sub-Funds are registered in the United Kingdom, apart from:

- AXA World Funds - ACT Emerging Markets Bonds (note 1b)
- AXA World Funds - ACT Factors - Climate Equity Fund
- AXA World Funds - Europe ex-UK MicroCap (note 1b)

Directors' Report

Dear Shareholders,

The Board of Directors of the Management Company is pleased to report on the progress of your SICAV for 2023.

2023 Global macro summary

Macroeconomic background

Although inflation peaked in 2022, 2023 started with central banks continuing the process of sharp monetary policy tightening in most jurisdictions as policy makers feared inflation persistence and second-round inflation effects after the price shocks of 2022. Tighter monetary policy added to headwinds to economic activity, although activity varied in different regions depending on idiosyncratic conditions. Inflation rates continued to soften, although remained above central bank target levels in most regions. Central banks reached what appeared to be peaks in the policy rate cycle, with some emerging market central banks beginning to loosen policy. A sharp monetary tightening led to a number of small bank failures in the US in March, but fallout was contained. Global activity continued despite a terrorist attack on Israel and Israel's retaliation on the terrorist group Hamas in Gaza, which increased global uncertainty even as events remained localised into year-end.

In Europe, inflation fell sharply from 9.2% at the end of 2022, to 2.9% at the end of 2023 (preliminary), although core measures of inflation saw less of an improvement, closing 2023 at 3.4% (from 5.2% end-2022). The sharp fall in inflation reflected an improvement in supply conditions, including a re-routing of energy supplies and a fall in global energy prices, and an improvement in global supply-chains as the global economy continued to recover from the pandemic. However, it also reflected a material weakening in economic activity across the region, the economy avoiding technical recession with modest 0.1% per quarter growth in each quarter of the first half of 2023, before contracting again by 0.1% in Q3 2023. Activity diverged somewhat across the currency union with Germany the weakest performer since Q1 2022, in part reflecting the importance of Russian energy supplies to its large industrial complex, and Italy also reflecting its larger industrial composition. Spain was the clear outperformer, in part reflecting less change to energy supply and a greater service sector composition. The ECB continued to raise its key deposit rate to 4.00% in September (from 2.00% end-2022), which is expected to be the peak rate.

The United Kingdoms (UK) saw a more lagged fall in inflation, the headline rate closing 2023 at 3.9% in November 2023 (from 10.5% end-2022), with core inflation falling to 5.1% (from 6.3%), in part reflecting the lagged pass-through of lower global energy prices. The Bank of England (BoE) had been the first major central bank to tighten monetary policy in 2021 and hiked throughout 2022. In 2023, with core inflation still rising in the first half of the year, the BoE continued to raise its bank rate to 5.25% in August (from 3.50% end-2022), level expected to be its peak. The combined impact of surging inflation and a sharp tightening in monetary policy has seen economic activity stagnate in the UK since Q2 2022. In 2023, despite a 0.3% rise in Gross domestic product (GDP) in Q1, activity was flat in Q2 and contracted by 0.1% in Q3, leaving a risk of technical recession by year-end.

By contrast, the United States (US) experienced relatively resilient growth across 2023 even as the Federal Reserve (Fed) continued to tighten policy and inflation eased. The economy expanded a little above trend in H1 2023 (2.2% average annualised pace) before posting a strong, consumer driven surge of 4.8% (annualised) in Q3 2023. Growth was supported by healthy consumer balance sheets, in part still benefiting from previous year's COVID fiscal stimulus, fresh incentives for private investment and structural improvements to the labour supply, including increased participation and immigration. Despite still solid growth, labour market imbalances continued to unwind helping inflation continue to fall to reach 3.1% in November (from 6.5% end-2022), with core prices also falling back to 4.0% from 5.7%. The Fed continued to tighten policy across 2023, although slowing the pace of tightening from H2 2022. It raised the Fed Funds Target range to 5.25-5.50% in July (from 4.25-4.50% end-2022), with official communication stating that Fed members consider rates "at or near" their peak.

Directors' Report

2023 Global macro summary (continued)

In Asia, China dominated concerns. A surprisingly abrupt end to the “Zero Covid” policy at the end of 2022 contributed to a strong 2.3% expansion of the economy in Q1 2023 as the economy “reopened”. However, with households emerging from the pandemic with weaker balance sheets than Western counterparts and with related, ongoing difficulties in the important housing sector, activity was unable to sustain this sharp growth, posting a weak 0.5% in Q2, before picking up again in Q3 to 1.3%. Government intervention increased in August with some easing in monetary policy, but a more substantive increase in fiscal support, including an unusual mid-year adjustment to the central government deficit target. This looks to have supported annual growth in China to the government’s target of “around 5%”. Japan also benefited from a belated easing of COVID restrictions and a rebound in tourism. The Japanese economy expanded by 1.2% and 0.9% in the first two quarters of 2023, before contracting by 0.7% in Q3. Inflation ended 2022 at 4.0% and peaked at 4.3% in January 2023 – its highest rate in 42 years. Inflation retreated to 2.8% in November. The Bank of Japan (BoJ) had set in place a number of adjustments to its yield curve control (YCC) policy across 2023, effectively ending it and allowing longer-term rates to rise, but there was still no change to its negative policy rate with the overnight call rate remaining at -0.1%.

Financial Markets

Bond yields rose for most of the year as central bank rate expectations rose over the first half of the year to be supplanted by concerns of policy remaining higher for longer – a sentiment which peaked over the summer before expectations of central bank rate cuts saw bonds rally and yields fall sharply to year-end. Over the same period equity markets performance was resilient in the face of rising yield expectations, spurred by solid corporate earnings, and then also rallied as yields fell sharply towards year-end. Credit markets were broadly stable over most of the year, with the exception around the banking turmoil in H1, before spreads tightened into year-end. Volatility measures illustrated the divergence across asset classes, falling across the course of the year for equities, but remaining elevated for bonds.

The MSCI AC World index rallied by 20.1% across the course of 2023, recovering the losses from the previous year. In broad terms, this was reflected in most large indices. The US S&P 500 index saw an even stronger 24.2% rise over the course of the year, although much of the S&P performance was concentrated in mega tech firms. By comparison, the Euro Stoxx 50 index underperformed the S&P, up 19.2% across the course of the year. This reflected divergent performances across other European bourses, with the German Dax and Spanish IBEX 35 indices rising a similar 20.3% and 22.8% on the year, an outperforming Italian MIB index, up 28.0% and an underperforming French CAC 40, up only 16.5%. By contrast, UK equities significantly underperformed, the FTSE 100 up just 3.8% and FTSE 250 up 4.4% - weak even allowing for sterling’s strengthening. The Japanese TOPIX index gained the most with a 25.1% rise over the course of 2023. However, China’s Shanghai Composite posted a drop of 11.4% as concerns about the economy and government intervention continued to weigh (single-country indices excluding dividends).

Directors' Report

2023 Global macro summary (continued)

US bond market developments captured global attention in 2023, although in the first half of the year, 10-year US Treasuries (UST) yields were broadly steady between 3.50-3.75%, with yields falling sharply around the time of the bank failures in March. Yields rose sharply over the summer to reach 5% at their peak in October, only to fall back sharply into year-end, dropping below 4% to close the year at 3.87% - just 3bps higher than their 2022 close. In Europe, bond volatility was higher in the first few months of the year as markets focused on the European Central Bank (ECB) outlook. After the US bank failures (and Credit Suisse rescue) European yields fell back sharply. They subsequently gradually rose from this point with the German 10-year bund yield reaching a peak in October close to 3.00% and not far from its 2.75% March highs, before falling back in line with global yields and closing the year at 2.03%, 56bps lower than end-2022. Yields closed even lower in France (-63bps), Italy (-107bps) and Spain (-71bps). The UK 10-year gilt yield followed a similar pattern to close the year at 3.60% (down 7bps from end-2022). However, in Japan yields were impacted sharply by changes to the BoJ's yield curve control adjustments that started at the back end of 2022. Yields jumped to below 0.50% from 0.25% after the late-2022 tweak to BoJ policy and again in July after further adjustment. This paved the way for a rise in yields close to 1% at the start of November – an 11-year high – before yields followed the international pattern and reversed sharply to year-end closing the year at 0.62%, still 21bps higher than the close to 2022.

Credit markets had already recovered from a material repricing by the end of 2022. Across 2023, with the exception of the period around the bank problems in March, which saw credit spreads widen, spreads were broadly stable over the year and drifted narrower to year-end. In the US, investment grade (IG) corporate debt closed the year with spreads at 104bps – its lowest since January 2022 and down 25bps from end-2022. US high yield (USHY) was also down 30bps to close at 334bps – a similar low to IG. The picture was similar in Europe, IG debt down 19bps on the year, the spread at 135bps, the lowest since April 2022 and USHY debt closed 2023 at 395bps, down 20bps on the year and the tightest since February 2022.

Having risen sharply to a 20-year high against a basket of currencies in 2022, the US dollar reversed these gains over 2023 as first overseas central bank hikes and subsequently Federal Reserve expected rate cuts undermined its strength. This translated into a 3.5% gain across 2023 for the euro, which closed the year at \$1.105 and a 6.0% gain for sterling that closed at \$1.275 (the euro fell by 2.3% against the pound over the year). Yet dollar weakness was not ubiquitous: with the BoJ continuing to resist tighter monetary policy the growing interest rate differential weighed on the Japanese currency and the yen fell by 7.0% against the dollar over the year. The dollar also posted a 2.9% gain against the Chinese yuan, where concerns about economic weakness and further policy easing weighed on the currency, which closed the year at RMB 7.10.

Main SICAV's events during the year ending 31 December 2023

We inform you that the assets under management of the SICAV amount to EUR 33,227,246,527 as at 31 December 2023.

I. SFDR Level II disclosures

The Commission Delegated Regulation (EU) 2022/1288 (“SFDR Level II”), setting out the regulatory technical standards (RTS) to be used by financial market participants and financial products when disclosing sustainability-related information under the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector (the “SFDR”) was adopted and published on 25 July 2022 in the Official Journal of the EU.

In order to comply by 1 January 2023 with SFDR Level II, pre-contractual templates detailing the content of the disclosures required under the SFDR, including any taxonomy-related information, were included in the Prospectus for each of the SICAV's sub-funds that are caught by articles 8 and 9 of the SFDR (“SFDR Article 8 Products” and “SFDR Article 9 Products”).

Directors' Report

Main SICAV's events during the year ending 31 December 2023 (continued)

“Sustainable Investments and promotion of ESG characteristics” section was amended in the introductory part of the Prospectus, in light of market evolution and changes in internal policies and approaches and SFDR disclosures were amended in the sub-funds' supplements of the prospectus.

SFDR recategorization

In the context of the enforcement of SFDR Level II and other regulatory positions released since SFDR level I, it has been decided to update the classification of certain sub-funds, to article 8 according to SFDR, which applies to products promoting environmental and/or social characteristics, and not as an article 9, which applies to products having a sustainable investment objective.

II. Restructuring and replacement of the Management Company

AXA Investment Managers decided to proceed with the restructuring of AXA Funds Management (“AFM”), its Luxembourg subsidiary and former management company of the SICAV, into a Luxembourg branch of AXA Investment Managers Paris (“AXA IM Paris”), another of its subsidiaries.

The contemplated restructuring was essentially effected via the merger into AXA IM Paris of AFM (the “Merger”) and the creation of a Luxembourg branch to lodge the Luxembourg employees of AXA IM Paris.

The Merger was effective on 28 February 2023.

III. Creation and launch of one sub-fund

AXA World Funds – ACT People and Planet Emerging Markets Bonds. This new sub-fund was launched on 1 August 2023.

- the objective of the Sub-Fund is to seek both income and growth of its investors' investment, in USD, and a sustainable investment objective, from an actively managed emerging markets bond portfolio, to advance the United Nations Sustainable Development Goals (SDGs) by investing into debt securities issued by companies whose business models and/or operational practices are aligned with targets defined by one or more SDGs and/or are green, social or sustainability bonds.

- the Sub-Fund is actively managed in reference to the index composed of 45% J.P. Morgan Emerging Markets Bond Index Global Diversified Investment Grade + 5% J.P. Morgan Emerging Markets Bond Index Global Diversified BB + 45% J.P. Morgan Corporate Emerging Markets Bond Index Broad Diversified High Grade + 5% J.P. Morgan Corporate Emerging Markets Bond Index Broad Diversified BB in order to capture opportunities in emerging markets debt.

IV. Change of Investment managers of certain Sub-Funds

The investment management activities of AXA Investment Managers Asia Ltd (Hong-Kong SAR) (“AXA IM HK”), acting either as delegated investment manager or sub-investment manager of certain Sub-Funds, have been transferred to other entities within the AXA Group, with effect as of 7 July 2023.

As a consequence of this transfer of activities, the investment management agreement between the Management Company and AXA IM HK has been terminated and AXA IM HK has been replaced in its functions as investment manager or as applicable, sub-investment manager, of the Sub-Funds listed below by AXA Investment Managers UK Limited as new investment managers or sub-investment managers, as applicable.

- Asian High Yield Bonds; and
- Asian Short Duration Bonds.

Directors' Report

Main SICAV's events during the year ending 31 December 2023 (continued)

AXA IM HK doesn't act anymore as sub-investment manager of the following Sub-Funds:

- ACT Green Bonds;
- Global Emerging Markets Bonds;
- Global Strategic Bonds; and
- ACT Emerging Markets Short Duration Bonds Low Carbon.

The prospectus' supplements of the above-mentioned Sub-Funds were updated accordingly.

V. Renaming of sub-funds

On 1 January 2023:

- From "AXA World Funds - Framlington Digital Economy" to "AXA World Funds – Digital Economy";
- From "AXA World Funds - Framlington Europe Real Estate Securities" to "AXA World Funds – Europe Real Estate";
- From "AXA World Funds – Framlington Global Real Estate Securities" to "AXA World Funds – Global Real Estate";
- From "AXA World Funds – Framlington Longevity Economy" to "AXA World Funds – Longevity Economy";
- From "AXA World Funds – Framlington Robotech" to "AXA World Funds – Robotech";
- From "AXA World Funds – Framlington Europe MicroCap" to "AXA World Funds – Europe Microcap";
- From "AXA World Funds – Framlington Europe Ex-UK Microcap" to "AXA World Funds – Europe Ex-UK Microcap";
- From "AXA World Funds – Framlington Euro Selection" to "AXA World Funds – Euro Selection";
- From "AXA World Funds – Framlington Europe Opportunities" to "AXA World Funds – Europe Opportunities";
- From "AXA World Funds – Framlington Europe Small Cap" to "AXA World Funds – Europe Small Cap";
- From "AXA World Funds – Framlington Evolving Trends" to "AXA World Funds – Evolving Trends";
- From "AXA World Funds – Global Factors – Sustainable Equity" to "AXA World Funds – Sustainable Equity QI";
- From "AXA World Funds – China Sustainable Growth" to "AXA World Funds – China Responsible Growth".

On 16 June 2023:

- From "AXA World Funds – Global Sustainable Aggregate" to "AXA World Funds – Global Responsible Aggregate";

On 7 July 2023:

- From "AXA World Funds – Framlington Emerging Markets" to "AXA World Funds – Emerging Markets Responsible Equity QI";
- From "AXA World Funds – Euro Inflation Plus" to "AXA World Funds – Inflation Plus".

On 30 October 2023:

- From "AXA World Funds – ACT People and Planet Emerging Markets Bonds" to "AXA World Funds - ACT Emerging Markets Bonds";
- From "AXA World Funds – ACT Eurozone Impact" to "AXA World Funds – ACT Eurozone Equity";
- From "AXA World Funds – Europe Opportunities" to "AXA World Funds – ACT Europe Equity";
- From "AXA World Funds – Framlington American Growth" to "AXA World Funds – US Responsible Growth".

Directors' Report

Main SICAV's events during the year ending 31 December 2023 (continued)

VI. Liquidation of sub-funds

AXA World Funds - Dynamic Optimal Income has been liquidated on 22 March 2023

AXA World Funds - Chorus Multi Strategy has been liquidated on 19 May 2023

AXA World Funds - Chorus Equity Market Neutral has been liquidated on 19 May 2023

AXA World Funds - China Sustainable Short Duration Bonds has been liquidated on 13 June 2023

AXA World Funds – China Responsible Growth has been liquidated on 27 June 2023

VII. Merger of a sub-fund

AXA World Funds – Europe MicroCap sub-fund merged into the sub-fund AXA World Funds – Europe ex-UK MicroCap on 10 November 2023.

VIII. General Manager

Mr. Fabien Lequeue resigned as General Manager of the SICAV with effect from 31 May 2023. In accordance with the provisions of Article 17 of the articles of incorporation, it was decided not to appoint a new General Manager.

IX. Composition of the Board of Directors

We remind you that Mrs. Anne-Laure Beneteau resigned as Director of the SICAV on 9 June 2023 and Mr. Matthias Gardin has been co-opted, the same day, as Director of the SICAV, subject to the approval of the Luxembourg Regulatory Authority (the "CSSF"). The CSSF gave its approval on 11 July 2023.

Consequently, your Board of Directors is composed, as at 31 December 2023 as follows:

Geoffroy Reiss, Chairman

Martin Burke

Matthias Gardin

Jean-Louis Laforge

Matthieu Tonneau

The Board of Directors

4 April 2024

Note: the figures stated in this report are historical and not necessarily indicative of future performance.

Audit report

To the Shareholders of
AXA World Funds

Our opinion

In our opinion, the accompanying financial statements give a true and fair view of the financial position of AXA World Funds (the “Fund”) and of each of its sub-funds as at 31 December 2023, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

What we have audited

The Fund’s financial statements comprise:

- the statement of net assets as at 31 December 2023;
- the statement of operations and changes in net assets for the year then ended;
- the schedule of investments and other net assets as at 31 December 2023; and
- the notes to the financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (Law of 23 July 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the “Commission de Surveillance du Secteur Financier” (CSSF). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the “Responsibilities of the “Réviseur d’entreprises agréé” for the audit of the financial statements” section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements. We have fulfilled our other ethical responsibilities under those ethical requirements.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our audit report thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

*PricewaterhouseCoopers, Société coopérative, 2 rue Gerhard Mercator, B.P. 1443, L-1014 Luxembourg
T : +352 494848 1, F : +352 494848 2900, www.pwc.lu*

*Cabinet de révision agréé. Expert-comptable (autorisation gouvernementale n°10028256)
R.C.S. Luxembourg B 65 477 - TVA LU25482518*

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund for the financial statements

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund's and each of its sub-funds' ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund either intends to liquidate the Fund or close any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the “Réviseur d’entreprises agréé” for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund;

- conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our audit report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our audit report. However, future events or conditions may cause the Fund or any of its sub-funds to cease to continue as a going concern;
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Notes to the Financial Statements as at 31 December 2023

Note 1: General

a) SICAV's details

AXA World Funds (the "SICAV") is a Luxembourg domiciled SICAV with multiple Sub-Funds organised as a "Société d'Investissement à Capital Variable" under the law of 10 August 1915 of the Grand Duchy of Luxembourg, as amended, (the "1915 law"). The SICAV is qualified under Part I of the law of 17 December 2010 (the "Law") on undertakings for collective investment for transferable securities ("UCITS"), as amended. The VAT number is LU 216 82 319.

The Board of Directors of the SICAV has confirmed its adherence to the ALFI's Code of conduct and to the standards of corporate governance described in this code.

The Management Company of the SICAV is AXA Investment Managers Paris, a public limited liability company (société anonyme à conseil d'administration), having its registered office at Tour Majunga la Défense 9 – 6 place de la pyramide 92800 Puteaux France, registered under the Nanterre Register of Trade and Companies under number 353 534 506, with a share capital of EUR 1,654,406, approved as a portfolio management company by the French Financial Markets Authority (Autorité des Marchés Financiers) under number GP92008 and licensed as an alternative investment fund manager.

b) 2023 SICAV's Summary

During the year ending 31 December 2023, the following events occurred:

- AXA Investment Managers has decided to proceed with the restructuring of AXA Funds Management S.A. ("AFM"), its Luxembourg subsidiary and the current management company of the Fund, into a Luxembourg branch of AXA Investment Managers Paris ("AXA IM Paris"), another of its subsidiaries.
The contemplated restructuring has essentially been effected via the merger of AFM into AXA IM Paris (the "Merger") and the creation of a Luxembourg branch from where the Luxembourg employees of AXA IM Paris would continue to operate. The Merger has been effective on 28 February 2023.
- **AXA World Funds – Framlington Global Real Estate Securities** has been renamed **AXA World Funds – Global Real Estate** on 1 January 2023.
- **AXA World Funds – China Sustainable Growth** has been renamed **AXA World Funds – China Responsible Growth** on 1 January 2023.

AXA World Funds – Next Generation

- LU1719066281: Class "UF" - Capitalisation in EUR Hedged

The share classes presented below correspond to the different type of classes currently available in the SICAV.

Class “A” Shares

Class “A” shares (including A FXO) are for all investors.

Class “AX” Shares

Class “AX” shares are only offered to AXA Group.

Notes to the Financial Statements as at 31 December 2023

Note 1: General (continued)

d) Share Classes List (continued)

Class “BE” Shares

BE share classes are only available through distributors based in Italy that entered into specific distribution arrangements with the Management Company subject to a Contingent Deferred Sales Charge (“CDSC”). Only available through distributors that entered into specific distribution arrangements with the Management Company subject to a Contingent Deferred Sales Charge (“CDSC”).

Class “BL” Shares

BL share classes are for all investors. Only available through distributors that entered into specific distribution arrangements with the Management Company subject to a Contingent Deferred Sales Charge (“CDSC”).

Class “BR” Shares

BR share classes are only offered to funds domiciled in Brazil.

Class “BX” Shares

BX share classes of the Sub-Funds AXA World Funds - Global Optimal Income and AXA World Funds - Euro Bonds are dedicated to AXA Luxembourg Fund’s shareholders following the merger effective on 12 December 2014.

Class “E” Shares

Class “E” shares are for all investors.

On top of the annual management fee, an annual distribution fee is charged to E shares accordingly depending on the concerned Sub-Fund (from 0.25% up to 1.00% of the Net Asset Value of class E shares). Shareholders cannot convert Class “E” Shares into another share class in the same or a different Sub-Fund without the prior approval of the SICAV.

Class “F” Shares

Class “F” shares are only offered (i) through financial intermediaries which according to either regulatory requirements or separate fee arrangements with their clients, are not allowed to keep trail commissions, and/or (ii) to Institutional investors investing on their own behalf.

Class “G” Shares

Class “G” Shares are for all investors. Class “G” Shares are only available through (i) certain distributors who have separate fee arrangements with their clients and (ii) to other investors at the Management Company’s discretion.

Class “G” Shares will be closed to subscriptions the day after the threshold of 100,000,000 in the share class currency is reached or exceeded. However, the SICAV reserves the right to close such “G” Share Class to subscriptions before the threshold of 100,000,000 in the share class currency is reached.

By exception, the threshold in all the Class “G” Shares currencies of AXA World Funds – US Enhanced High Yield Bonds is set at 150,000,000.

Class “I” Shares

The Directors reserve the right to issue Class “I” shares (including I FXO) at their sole discretion. Class “I” shares are only offered to Institutional investors investing directly or indirectly on their own behalf and/or financial intermediaries providing discretionary portfolio management service.

Notes to the Financial Statements as at 31 December 2023

Note 1: General (continued)

d) Share Classes List (continued)

Class “J” Shares

The Directors reserve the right to issue Class “J” shares at their sole discretion. Class “J” shares are only offered to Institutional investors who are resident in Japan.

Class “L” Shares

Class “L” Shares are only offered through financial intermediaries in the United Kingdom which according to either regulatory requirements or separate fee arrangements with their clients, are not allowed to keep trail commissions.

Class “M” Shares

Class “M” shares are only offered with the prior approval of the Board and (i) held by AXA Investment Managers or its subsidiaries for use in institutional mandates or investment management agreements for a dedicated fund contracted with the AXA Group or (ii) held by Institutional Investors investing directly or indirectly on their own behalf and/or to financial intermediaries providing discretionary portfolio management service.

Class “N” Shares

Offered only to distributors based in the Americas (South and North America regions, including the United States).

Class “SP” Shares

Class “SP” shares are only offered to the employees’ savings funds managed by the AXA Group.

Class “T” Shares

Class “T” shares are only offered to Taiwan distributors and to Taiwan investors.

Class “U” Shares

Class “U” shares are only offered to distributors based in the Americas (South and North America regions, including the United States).

Class “UA” Shares

Offered only through larger financial intermediaries belonging to a financial group with a predominance of its business in the US and which are expressly prior authorized by the Management Company.

Class “UF” Shares

Class “UF” shares are offered only through larger financial intermediaries belonging to a financial group with a predominance of its business in the US and which (i) are expressly prior authorized by the Management Company and (ii) according to either regulatory requirements or separate fee arrangements with their clients, are not allowed to keep trail commissions.

Notes to the Financial Statements as at 31 December 2023

Note 1: General (continued)

d) Share Classes List (continued)

Class “UI” Shares

Class “UI” shares are offered only to larger institutional investors investing directly or indirectly on their own behalf and/or as part of providing discretionary portfolio management services, where such investor belongs to a financial group with a predominance of its business in the US and which are expressly prior authorized by the Management Company.

Class “X” Shares

Class “X” shares are for larger Institutional Investors investing directly or indirectly on their own behalf and/or financial intermediaries providing discretionary portfolio management service and with a high amount of minimum initial subscription.

Class “ZD” Shares

Only offered through digital platforms which are large startups providing financial services to their clients via a mobile application and which are expressly authorized by the Management Company.

Class “ZF” Shares

Class “ZF” shares are only offered through larger financial intermediaries which (i) are expressly prior authorized by the Management Company and (ii) according to either regulatory requirements or separate fee arrangements with their clients, are not allowed to keep trail commissions.

Class “ZI” Shares

Class “ZI” shares are for larger Institutional Investors investing directly or indirectly on their own behalf and/or financial intermediaries providing discretionary portfolio management service.

Capitalisation and Distribution Shares

Share classes can be further divided into Capitalisation Shares and Distribution Shares. These shares differ by their distribution policies, the first by accumulating income, and the other by distributing dividends. The assets of these two categories are gathered together.

Notes to the Financial Statements as at 31 December 2023

Note 1: General (continued)

d) Share Classes List (continued)

Redex (Reduction of Duration Exposure) Classes of Shares

The underlying investment objective of the redex share classes is, as for the other share classes of the Sub-Funds, to achieve the investment objective of the Sub-Fund, while, only in the case of the relevant share class to mitigate the Fund's exposure to an increase or decrease of interest rates curves. Such an overlay strategy will be managed through the tracking of listed derivatives.

To the extent applicable, the SICAV is allowed, for the purposes of the Redex Classes of Shares to invest in the following financial instruments traded on regulated or OTC markets:

- Listed or OTC futures,
- Repurchase agreements, and
- Securities lending.

Following the opinion of the ESMA 34-43-296 on share classes of UCITS (the "Opinion"), the Directors ruled that the Redex share classes do not comply with the principles set out in the Opinion. In addition they do not intend to convert the Redex share classes in other share classes available. As a consequence, the Directors have further decided to close for subscription from any new investor the Redex share classes as from 31 July 2017 and to close for subscription to any investor, including existing investors, such share classes as from 31 July 2018.

Share classes denominated "Hedged"

Any Sub-Fund can issue any Share Class in currency hedged form, meaning that the hedged version of the Share Class is denominated in a currency that is different from the Sub-Fund's Reference Currency, and is hedged to that currency (with the exception of BR Share Classes that offer currency exposure to the BRL). The currency risk between the Sub-Fund's Net Asset Value and the currency of the hedged Share Class will be hedged at least at 95%. Hedged Share Classes are designated with a "Hedged".

All costs specifically associated with offering each hedged Share Class such as currency hedging and foreign exchange costs will be charged to that Share Class.

If investors invest in a hedged Share Class, they could experience losses from currency exchange fluctuations to the extent that the Share Class' hedging is incomplete, and they will give up any potential gains from currency exchange fluctuations to the extent that hedging is effective.

e) Seed Money from AXA Group

Shares of a Sub-Fund may be held either by a French fund in which AXA Investment Managers is a majority shareholder (hereinafter the "AXA IM Fund") or by companies which are part of the AXA group of companies or by investment funds which are managed by investment management companies in which AXA IM group directly or indirectly holds a shareholding ("AXA IM Group Managed Funds") for the purposes of building a track record or a specific marketing action on the Sub-Fund.

Notes to the Financial Statements as at 31 December 2023

Note 1: General (continued)

e) Seed Money from AXA Group (continued)

AXA IM Fund and/or companies of the AXA IM group and/or AXA IM Group Managed Funds may, at any time, choose to redeem their Shares in the Sub-Fund which may result in a material decrease in the total assets of the Sub-Fund and/or a restructuring of the Sub-Fund including but not limited to restructuring causing the winding up of the Sub-Fund or its merger with another fund. Specific rules have been established by the Management Company with a view to preserve an equal treatment between the Shareholders of the Sub-Fund and will be applied in such case.

The foregoing does not prevent Shares of a Sub-Fund from being held by other investors including external seed investors.

f) Distribution

Distribution Shares may pay a dividend to their holders. In such case, dividends shall be paid out of the investment income gains and/or realised capital gains, or out of any other funds available for distribution. No Sub-Fund will make a dividend payment if the assets of the SICAV are below the minimum capital requirement, or if paying the dividend would cause that situation to occur.

Note 2: Significant Accounting Policies

a) Presentation of the Financial Statements

The Financial statements have been prepared on a going-concern basis of accounting, except for the sub-funds which have been liquidated during the year ended 31 December 2023. As such, the financial statements for these sub-funds have been prepared on a non-going concern basis.

At 31 December 2023, the total of cross Sub-Funds' investments amounts to EUR 203,681,672 and therefore total combined Net Asset Value at the end of the year without cross-investments would amount to EUR 33,023,564,855.

b) Foreign Currency Translation

The accounting records and the financial statements are denominated in the reference currencies of each Sub-Fund.

Transactions in currencies other than that in which the Sub-Fund is denominated are converted into the respective currency of the portfolio based on the exchange rate in effect at the date of the transaction.

Assets and liabilities denominated in other currencies are converted into the respective currency of the Sub-Fund at the last available rate of exchange at each balance sheet date.

Notes to the Financial Statements as at 31 December 2023

Note 2: Significant Accounting Policies (continued)

b) Foreign Currency Translation (continued)

For all AXA World Funds Sub-Funds, the exchange rates applied for the Net Asset Value calculation and to combine all Sub-Funds' Net Asset Value are as follows:

29/12/2023								
1 EUR =	1.61889	AUD	1 EUR =	91.92208	INR	1 EUR =	1.10465	USD
1 EUR =	1.45659	CAD	1 EUR =	155.73358	JPY	1 EUR =	20.20129	ZAR
1 EUR =	0.92973	CHF	1 EUR =	1,422.67891	KRW			
1 EUR =	964.67439	CLP	1 EUR =	18.70670	MXN			
1 EUR =	7.83440	CNY	1 EUR =	11.21850	NOK			
1 EUR =	24.68849	CZK	1 EUR =	1.74469	NZD			
1 EUR =	7.45457	DKK	1 EUR =	4.34376	PLN			
1 EUR =	0.86653	GBP	1 EUR =	11.13250	SEK			
1 EUR =	8.62572	HKD	1 EUR =	1.45714	SGD			
1 EUR =	382.21508	HUF	1 EUR =	37.70447	THB			
1 EUR =	3.97773	ILS	1 EUR =	33.90226	TWD			

c) Combined Figures

The combined Statement of Net Assets and the combined Statement of Operations and Changes in Net Assets are expressed in EUR and are presented for information purposes only.

d) Valuation of Investments

The assets of the SICAV are valued as follows:

Liquid assets are valued at their face value with interest accrued; in the case of short-term instruments (especially discount instruments) with maturities of less than 90 days, the value of the instrument based on the net acquisition cost, is gradually adjusted to the repurchase price thereof while the investment return calculated on the net acquisition cost is kept constant. In the event of material changes in the market conditions, the valuation basis of the investment is adjusted to the new market yields.

Transferable securities which are admitted to an official exchange listing or dealt on another regulated market are valued at the closing price on such market. If the investments are listed or traded on several markets, the closing price at the market, which constitutes the main market for such investments, will be determining.

Transferable securities not admitted to an official listing nor dealt on another regulated market are valued at their last available market price.

Investments for which no price quotation is available or for which the price referred to first and third paragraphs above is not representative of the fair market value, are valued prudently and in good faith by the Board of Directors of the SICAV on the basis of their reasonably foreseeable sales prices.

Those investments are identified distinctly in the Schedule of Investments.

The financial statements are presented on basis of the Net Asset Value calculated on 31 December 2023.

Notes to the Financial Statements as at 31 December 2023

Note 2: Significant Accounting Policies (continued)

e) Acquisition Cost of Investments

The acquisition cost of investments expressed in currencies other than the reference currency of the Sub-Fund is translated into the reference currency of the Sub-Fund on the basis of the exchange rates prevailing on the purchase date.

f) Realised Gains/(Losses) on Sales of Investments

Realised gains/(losses) on sales of investments are determined on the basis of the average cost of the investments sold.

g) Valuation of the Forward Foreign Exchange Contracts

Outstanding forward foreign exchange contracts are valued at the closing date using the forward rates of exchange applicable to the outstanding life of the contract. The Net unrealised appreciation/(depreciation) on forward foreign exchange contracts is included in the Statement of Net Assets.

h) Valuation of Financial Futures and Options

Outstanding futures contracts and exchange traded options contracts are valued at the closing date using the last available market price of the instrument. The Net unrealised appreciation/(depreciation) on open futures contracts is included in the Statement of Net Assets.

i) Valuation of Contracts for Difference

Contracts For Difference ("CFD") are valued on the basis of the difference between the price of their underlying on the valuation date and on the acquisition date. The Net unrealised appreciation/(depreciation) is included in the Statement of Net Assets.

j) Valuation of Swap Agreements

A swap is an agreement that obliges two parties to exchange a series of cash flows at specified intervals based upon or calculated by reference to changes in specified prices or rates for a specified amount of an underlying asset. The payment flows are usually netted against each other, with the difference being paid by one party to the other. Risks may arise as a result of the failure of another party to the swap contract to comply with the terms of the swap contract. The loss incurred by the failure of a counterparty is generally limited to the net payment to be received by the SICAV, and/or the termination value at the end of the contract.

Therefore, the SICAV considers the creditworthiness of each counterparty to a swap contract in evaluating potential credit risk. Additionally, risks may arise from unanticipated movements in interest rates or in the value of the underlying securities or indices.

Notes to the Financial Statements as at 31 December 2023

Note 2: Significant Accounting Policies (continued)

j) Valuation of Swap Agreements (continued)

The SICAV entered into performance swap agreements pursuant to which the SICAV receives or pays interest on a notional amount and receives or pays the performance of the underlying index based on the same notional amount. The interest is accrued and the performance of the index is valued on a daily basis. The net receivable or payable amount is recorded in the Statement of Net Assets under the headings “Net unrealised appreciation on swap contracts” and “Net unrealised depreciation on swap contracts”.

The Swap Agreements are valued at fair market value as determined prudently and in good faith by the SICAV. All unrealised appreciation/(depreciation) are included in the Statement of Net Assets.

The different types of Swaps held by the SICAV and their specifics are as follows:

Credit Default Swaps (“CDS”) are bilateral financial contracts in which one counterparty (the protection buyer) pays a periodic fee in return for a contingent payment by the protection seller following a credit event of a reference issuer. The protection buyer acquires the right to sell a particular bond or other designated reference obligations issued by the reference issuer for its par value or the right to receive the difference between par value and market price of the said bond or other designated reference obligations (or some other designated reference or strike price) when a credit event occurs.

A Total Return Swap (“TRS”) is an agreement to exchange the total performance of a bond or other underlying asset (share, index, etc.) for a benchmark rate plus a spread. The total performance includes the interest coupons, dividends and profits and losses on the underlying asset over the life of the agreement, depending on the type of underlying concerned. The risk in this type of agreement is linked to the fact that the benefit for each counterparty will depend on how the underlying asset performs over time, which is unknown at the time at which the agreement is entered into.

Interest Rate Swaps (“IRS”) are swap agreements whereby parties exchange fixed income (sum of the notional amount and the fixed rate) for variable income (sum of the notional amount and the floating rate) and vice versa.

k) Dividend Income

Dividends are accounted for on an ex-dividend date basis, net of any irrecoverable withholding tax.

l) Interest Income

Interest income is recognised on a daily accrual basis, net of any irrecoverable withholding tax (interest on investment portfolio, interest on deposits and interest on call accounts and security lending income). Interest income is disclosed net of any amortization.

Notes to the Financial Statements as at 31 December 2023

Note 2: Significant Accounting Policies (continued)

m) Swing Pricing

If the net subscriptions and redemptions based on the last available Net Asset Value on any Valuation Day exceed a certain threshold of the value of a Sub-Fund or a Share Class on that Valuation Day, as determined and reviewed on a periodic basis by the Management Company, the Net Asset Value may be adjusted respectively upwards or downwards to reflect the dealing and other costs that may be deemed to be incurred in buying or selling assets to satisfy net daily transactions. The Management Company may apply a swing pricing mechanism across any Sub-Fund or Share Class. The extent of the price adjustment will be set by the Management Company and does not exceed 2% of the Net Asset Value.

During the year, the swing pricing mechanism was applied across all Sub-Funds.

n) Capital Gain Tax

Some governments exercise substantial influence over the private economic sector and investments may be affected by political and economic instability. In adverse social and political circumstances, governments have been involved in policies of expropriation, confiscatory taxation, nationalisation, intervention in the securities market and trade settlement and imposition of foreign investment restrictions and exchange controls, and these could be repeated in the future. In addition to withholding taxes on investment income, some markets may impose differential capital gain taxes on foreign investors. The related amounts are accounted as "Other payables" under the Statement of Net Assets.

Note 3: Taxation

The SICAV is a registered investment fund domiciled in Luxembourg and is, as a result, exempt from tax, except for subscription tax ("Taxe d'Abonnement"). Under current legislation and regulation, the SICAV is subject to a subscription tax calculated and payable quarterly on the Net Asset Value of the SICAV at the end of the respective quarter. The SICAV pays a tax rate equal to 0.05% for assets related to the shares reserved for retail investors. This tax is reduced to 0.01% for assets related to the shares reserved for institutional investors and/or for the cash and money market Sub-Funds.

The "Taxe d'abonnement" is waived for that part of the SICAV invested in units of other undertakings for collective investment that have already paid the "Taxe d'abonnement" in accordance with the statutory provisions of the Luxembourg law. This tax is part of the Applied Service Fees in the Financial Statements.

Notes to the Financial Statements as at 31 December 2023

Note 4: Distribution Fees

The distribution fees are calculated as a percentage of the Net Asset Value per share class. As at 31 December 2023, the maximum distribution fees applied are the following:

	Distribution Fees

The share classes not charging distribution fees as at 31 December 2023 are not disclosed.

Note 5: Management Fees

The Management Company is entitled to receive, from the assets of the relevant Sub-Funds, a management fee in an amount to be specifically determined for each Sub-Fund or share class. The annual management fee is calculated as a percentage of the Net Asset Value of each Sub-Fund. The details and the percentage of this fee, per share class, are described in the Full and Simplified Prospectuses and in the table presented hereinafter. This fee is calculated and accrued daily. The Management Company will remunerate the Investment Managers out of the management fee in accordance with the contracts signed with the different parties. The management fees are used in part to pay remuneration (trailer fees) for distribution activities concerning the Fund.

As at 31 December 2023, the rates are the following:

Retrocession on management fee levied on the assets invested in other UCITS or UCIs is calculated and accrued daily and refunded to each share class. This retrocession represents a partial discount or a full refund of the management fees levied by each underlying UCITS or UCIs.

As foreseen in the Prospectus, the Sub-Funds will not invest in underlying UCIs which are themselves submitted to a management fee exceeding 3%.

Notes to the Financial Statements as at 31 December 2023

Note 6: Performance Fees

For the below listed Sub-Funds and share classes, the Management Company is entitled to receive a performance fee in addition to the management fees, based on the Sub-Fund's performance in excess of the benchmark return, calculated as described in the Notes on Sub-Fund's Costs section of the prospectus or in the related Sub-Fund's appendices in the Prospectus dated September 2023.

Notes to the Financial Statements as at 31 December 2023

Note 6: Performance Fees (continued)

As of 31 December 2023, the performance fee rates and the benchmarks are as follows:

Note 7: Redex Fees

The Redex fees are payable to the Investment Manager in charge of the management of the Redex Class and calculated as a percentage of the net assets of the relevant Class.

The maximum annual fee linked to the reduction of the duration exposure of the Redex share classes applied is 0.05%.

Note 8: Withholding Tax Reclaim Income/Withholding Tax Reclaim Fees

The withholding tax reclaim income and fees are linked to the tax-reclaim processes. These income and fees are disclosed for each Sub-Fund in the Statement of Operations and Changes in Net Assets.

Note 9: Applied Service Fee

In order to pay its ordinary operating expenses, the SICAV will pay an Applied Service Fee to the Management Company out of the assets of the relevant Share Class. To seek to protect the Shareholders from fluctuations in these ordinary operating expenses, the yearly total amount of these expenses to be charged to each Share Class by the Management Company (the "Applied Service Fee"), will be at a maximum level of 0.50% of the Net Asset Value in respect of each Share Class (the "Maximum Level"). The level of effective Applied Service Fee might be set out below this Maximum Level with different fixed effective Applied Service Fee rates applicable across Share Classes. The level of the Applied Service Fee per Sub-Fund and per Share Class is defined taking into account different criteria such as, but not limited to, the costs charged to the Share Class and the variation of costs linked to a change of the Net Asset Value in respect of the relevant Share Class that might be due to market effects and/or dealing in shares.

By way of a resolution, the Directors (i) may modify in its sole discretion the level of effective Applied Service Fee and (ii), may amend at any time upon prior notice to relevant Shareholders, the Maximum Level of the Applied Service Fee applicable to all Share Classes.

Notes to the Financial Statements as at 31 December 2023

Note 9: Applied Service Fee (continued)

The Applied Service Fee is fixed in the sense that the Management Company will bear the excess in actual ordinary operating expenses to any such Applied Service Fee charged to the Share Classes. Conversely, the Management Company will be entitled to retain any amount of Applied Service Fee charged to the Share Classes exceeding the actual ordinary operating expenses incurred by the respective Share Classes.

The effective Applied Service Fee is accrued at each calculation of the Net Asset Value and included in the ongoing charges of each Share Class disclosed in the relevant KIID.

In counterparty of the Applied Service Fee received from the SICAV, the Management Company then provides and/or procures, on behalf of the SICAV the following services and bears all expenses (including any reasonable out of pocket expenses) incurred in the day-to-day operations and administration of the Share Classes, including but not limited to:

- Depository fees except transaction related fees;
- Auditor's fees;
- directors' fees and expenses, and remuneration of officers and employees of the SICAV: any director of the SICAV will be entitled to a fee in remuneration for his services as a director or in his capacity as a member of any committee of the Board;
- the Luxembourg 'Taxe d'abonnement';
- Share Class currency hedging cost;
- the fees of the registrar agent and administrator (including the calculation of the Net Asset Value), any paying agent and of any representatives in jurisdictions where the Shares are qualified for sale, and of all other agents employed on behalf of the SICAV; such remuneration may be based on the net assets of the SICAV or on a transaction basis or may be a fixed sum;
- the cost of preparing, printing and publishing in such languages as are necessary, and distributing offering information or documents concerning the SICAV (including shareholder notification), annual and semi-annual reports and such other reports or documents, as may be required under the applicable laws or regulations of the jurisdictions or the authorities where the Shares are qualified for sale;
- registrar's fees;
- the cost of printing certificates and proxies;
- the cost of preparing and filing the Management Regulations and all other documents concerning the SICAV, including registration statements and offering circulars with all authorities (including local securities dealers' associations) having jurisdiction over the SICAV or the offering of Shares;
- the cost of qualifying the SICAV or the sale of Shares in any jurisdiction or of a listing on any stock exchange;
- the cost of accounting and bookkeeping;
- legal fees;
- the cost of preparing, printing, publishing and distributing public notices and other communications to the Shareholders;
- the cost of calculating the Net Asset Value of each Share Class;
- insurance, postage, telephone and telex and any communication mean;

Notes to the Financial Statements as at 31 December 2023

Note 9: Applied Service Fee (continued)

- distribution and sales support costs (including costs charged by local routing order platforms, local transfer agent costs, local representative agent and the translation costs); and
- all similar charges and expenses.

Note 10: Soft Commissions

Since the new European regulation MIFID II came into force on 3 January 2018, the Equity CSAs that AXA IM had with brokers are no longer valid and are being replaced by new contracts with selected brokers aiming to cover the research needs of AXA IM front office teams. The cost of research is borne directly by AXA IM.

Also, regarding some compartments of the SICAV mainly invested in US High Yield. AXA IM may enter into arrangements with an independent third-party counterparty, in case of cross trade events, in line with AXA IM policies and procedures, as well as regulation. In such a case, soft dollar arrangement does not involve the payment of any direct commissions to the executing broker. Rather, a predetermined schedule of "commissions" has been documented and approved, which are then built into the prices of the cross trades.

Note 11: Transaction Fees

The transaction fees are disclosed for each Sub-Fund in the Statement of Operations and Changes in Net Assets under the caption "Transaction fees". Those fees are also detailed in the Additional Appendix.

Note 12: Futures

The unrealised appreciation/(depreciation) on futures is included in the Statement of Net Assets under the caption "Net unrealised appreciation/(depreciation) on open futures contracts".

Counterparty information

The sole counterparty for the Futures transactions as at 31 December 2023 is Goldman Sachs International with the following cash held at broker per Sub-Fund (those amounts are included in the Cash in Statement of Net Assets):

Sub-Fund's name	Currency of the Sub Fund	Type of collateral (Cash/Securities)	Total collateral (in Sub-Fund currency)

Note 16: Securities Lending

The SICAV may lend positions of its securities portfolio to third parties. In general, lending may only be effected via recognised clearing houses, or through the intermediary of prime financial institutions that specialise in such activities and where collateral is received as guarantee.

The Management Company did not receive any commissions on securities lending transactions.

The Management Company has appointed AXA Investment Managers GS Limited as the stock lending and repurchase agent pursuant to a delegation agreement dated 15 February 2013. AXA Investment Managers GS and the management company are affiliates companies belonging to AXA IM group. In order to prevent any conflicts of interest and ensure Best Execution, AXA IM group has put in place a conflicts of interest policy and a Best Execution policy, details of which are available on <https://www.axa-im.com/our-policies-and-reports>, and which provides respectively that (i) conflict of interests are mitigated in maintaining appropriate analyses mechanisms, controls and in ensuring that Securities Lending Agent is kept separate from the Portfolio Manager teams and (ii) that best execution is ensured by not typically using the same execution venues for securities lending transactions as for other transactions to ensure that the particular characteristics of such Securities lending transactions are taking into account.

Any revenues from efficient portfolio management techniques will be returned to the SICAV, minus direct and indirect operational costs.

Direct operational cost is defined as the cost directly attributable to the implementation of EPM techniques (e.g. agent lender staff cost, trading platform cost, market data, custody and safekeeping costs, collateral management and SWIFT messaging costs).

Indirect cost is defined as the operational cost not directly attributable to the implementation of EPM techniques (e.g. insurance fee, premises and facilities).

Repurchase and reverse repurchase: 100% of the gross revenue generated by the repurchase (if any) and the reverse repurchase activities will benefit to the SICAV.

Notes to the Financial Statements as at 31 December 2023

Note 16: Securities Lending (continued)

Securities lending: Each Sub-Fund pays 35 % of the gross revenues generated from securities lending activities as costs / fees to AXA Investment Managers GS Limited in its capacity of lending agent and retain 65% of the gross revenues generated from securities lending activities. All costs / fees of running the programme are paid from the lending agent's portion of the gross income (35%). This includes all direct and indirect costs / fees generated by the securities lending activities. AXA Investment Managers GS Limited is a related party to the Management Company and the Investment Manager of the Sub-Fund.

The accruals on securities lending income/expenses are booked daily in accounting and paid on a monthly basis.

Some sub-funds have been subject to adjustment on security lending Income accruals, from previous years , that have been registered in other expenses from the statement of Operations.

Please find below details on the market value of securities on loan and related collateral information as at 31 December 2023:

Note 18: Sub-Funds Offered for Sale in Hong Kong

The following AXA World Funds Sub-Funds are offered for sale in Hong Kong:

- AXA World Funds - ACT Emerging Markets Short Duration Bonds Low Carbon
- AXA World Funds - Asian High Yield Bonds
- AXA World Funds - Asian Short Duration Bonds
- AXA World Funds - Digital Economy (note 1b)
- AXA World Funds - Emerging Markets Responsible Equity QI (note 1b)
- AXA World Funds - Euro Selection (note 1b)
- AXA World Funds - Europe Real Estate (note 1b)
- AXA World Funds - Evolving Trends (note 1b)
- AXA World Funds - Global High Yield Bonds
- AXA World Funds - Global Inflation Bonds
- AXA World Funds - Global Real Estate (note 1b)
- AXA World Funds - Global Strategic Bonds
- AXA World Funds - Longevity Economy (note 1b)
- AXA World Funds - Sustainable Equity QI (note 1b)
- AXA World Funds - US High Yield Bonds
- AXA World Funds - US Responsible Growth (note 1b)

Notes to the Financial Statements as at 31 December 2023

Note 18: Sub-Funds Offered for Sale in Hong Kong (continued)

Authorisation in Hong Kong does not imply official approval or recommendation by the Hong Kong Securities and Futures Commission.

Note 19: SFC Hong Kong Requirements

The information requested by the Hong Kong Code on Unit Trusts and Mutual Funds (Appendix E) relating to the statement of net assets and to the investment portfolio can be obtained upon request at the address of the Depositary.

Note 20: Connected Party Transactions

Other than securities lending activity described below as defined for Hong Kong purposes, the SICAV did not enter into connected party transactions.

During the year, the following Sub-Funds, which are authorised for distribution by Securities and Futures Commission in Hong Kong, entered into securities lending, where the securities lending agent AXA Investment Managers GS Limited is a connected party:

- AXA World Funds - ACT Emerging Markets Short Duration Bonds Low Carbon
- AXA World Funds - Asian High Yield Bonds
- AXA World Funds - Asian Short Duration Bonds
- AXA World Funds - Digital Economy (note 1b)
- AXA World Funds - Emerging Markets Responsible Equity QI (note 1b)
- AXA World Funds - Euro Selection (note 1b)
- AXA World Funds - Europe Real Estate (note 1b)
- AXA World Funds - Evolving Trends (note 1b)
- AXA World Funds - Global High Yield Bonds
- AXA World Funds - Global Inflation Bonds
- AXA World Funds - Global Real Estate (note 1b)
- AXA World Funds - Global Strategic Bonds
- AXA World Funds - Longevity Economy (note 1b)
- AXA World Funds - Sustainable Equity QI (note 1b)
- AXA World Funds - US High Yield Bonds
- AXA World Funds - US Responsible Growth (note 1b)

Note 21: Significant events occurred during the year

AXA IM has made the decision to revisit the business setup in Hong Kong with regards to the AXA IM Core business.

In order to increase operational and investment synergies across AXA IM investment teams for the benefit of clients, both AXA entities and third parties, AXA IM therefore decided to concentrate its equity and fixed income emerging markets portfolio management expertise in Paris and London.

The change of portfolio management from Hong Kong to United Kingdom was effective as of 7 July 2023.

- The Hong Kong team stopped the management of the portfolios as of 6 July 2023 end of day.
- The United Kingdom team started the management of the portfolios as of 7 July 2023 beginning of day.

Notes to the Financial Statements as at 31 December 2023

Note 22: Subsequent Events

AXA World Funds - Global Sustainable Credit Bonds will be merged into AXA World Funds - Global Responsible Aggregate (note 1b) on 5 April 2024.

AXA World Funds - Asian High Yield Bonds will be merged into AXA World Funds - Asian Short Duration Bonds on 26 April 2024.

Note 23: Sustainable Finance Disclosure regulation ("SFDR")

Information on environmental and/or social characteristics and/or sustainable investments are available in the unaudited Sustainable Finance Disclosure Regulation Section and its relevant annexes where applicable.

(1) The TERs above represent, as indicated in the prospectus, a weighted average of administrative expenses which shareholders could normally have expected to pay when being invested in the chosen share class as indicated in the prospectus. This methodology is in line with accepted standard market practices and represents a fair view of publications to be made in the market.

(2) Please refer to note 9 for more details on the Applied Service Fee.

(3) The Ongoing charges are based on historical expense data, as well as anticipated material budget changes for the period. For certain classes of shares and Sub-Funds where there is no relevant expense history, Ongoing charge figures are based on estimates. The figures represent the situation at 31 December 2023. The Ongoing charges calculation excludes the Performance fees.

Eligibility for the “Plan Epargne en Actions” (PEA and PEA/PME)

Owing to their eligibility for French share savings schemes “Plan d’épargne en actions” (PEA), the Sub-Funds of the AXA World Funds listed below permanently invest at least 75% of their net assets in securities and rights that are eligible for the PEA such as equities, equivalent securities, investment certificates and cooperative investment certificates issued by companies having their registered office in the European Economic Area.

The Sub-Fund AXA World Funds - Framlington Europe Ex-UK Microcap is being eligible to the French savings plan called “PEA/PME” meaning that the Sub-Fund is permanently invested for a minimum of 75% in securities or rights eligible to the PEA/PME issued by companies having their registered office in the European Economic Area, and complying with criteria indicated in Article L.221-32-2-2° of the French Monetary and Financial Code, of which a minimum of 50% is invested in equities or rights.

Please find below the PEA ratio as at 31 December 2023:	Market Value of European Economic Area securities	Market Value of European Economic Area securities (PME)
AXA World Funds - ACT Eurozone Equity (note 1b)	94.06%	-
AXA World Funds - Europe ex-UK Microcap (note 1b)	89.63%	87.24%
AXA World Funds - Framlington Sustainable Eurozone	96.27%	-
AXA World Funds - Italy Equity	99.36%	-

Additional Unaudited Appendix

Remuneration policy

According to regulatory requirements on remuneration disclosure applicable to asset management companies, this disclosure provides an overview of the approach on remuneration taken by AXA Investment Managers Paris (hereafter "AXA IM"). Further information on the composition of the Remuneration Committee and driving principles of the Remuneration Policy is available on AXA IM website: www.axa-im.com/en/remuneration. A copy of this information is available upon request free of charge.

Governance - AXA IM's Remuneration Policy, which is reviewed and approved by the AXA IM Remuneration Committee every year, sets out the principles relating to remuneration within all entities of AXA IM and takes into account AXA IM's business strategy, objectives, and risk tolerance, as well as the long-term interests of AXA IM's shareholders, clients and employees. The AXA IM Remuneration Committee, in line with the remuneration policies and procedures set and validated at AXA Group level, ensures consistency and fair application of the Remuneration Policy within AXA IM, as well as compliance with applicable regulations.

The central and independent review that the effective implementation of the AXA IM's Remuneration Policy complies with the procedures and policies adopted by AXA IM Group level, is performed by the AXA IM Internal Audit Department, who presents each year its conclusions to the AXA IM Remuneration Committee to enable it to perform its diligences.

These conclusions did not mention any particular comments regarding the compliance of the effective implementation of the AXA IM's Remuneration Policy.

The result of the annual exam by the AXA IM Remuneration Committee is presented to the Board of Directors of AXA IM along with the amendments implemented into the AXA IM's Remuneration Policy.

These changes primarily relate to the global principles of the deferred remuneration policy, the removal of the allocation of AXA IM Performance Shares and AXA group stock options, a reminder of rules to ensure fair allocation of remuneration (neutrality in terms of sex, religion, age, sexual orientation, marital status, etc.) and the introduction of a section on the incorporation of sustainability risk in order to guarantee compliance with all regulations in force, in particular Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector and their alignment with sales and human resources strategies within the AXA Investment Managers Group.

The Global Remuneration Policy has been reviewed to factor the proposed deferral structure in and ensure compliance with all governing regulations and alignment with the AXA IM business and Human Resource strategies.

Additional Unaudited Appendix

Remuneration policy (continued)

Quantitative information - Data provided below are those of AXA Investment Managers covering all subsidiaries of the AXA Investment Managers Group and types of portfolios as at 31 December 2023 after application on remuneration data of the Fund's weighted Asset Under Management allocation key.

Total amount of remuneration paid and/or awarded to staff for the year ended 31 December 2023, prorated to the Fund's assets ¹	
Fixed Pay ² ('000 EUR)	28,348
Variable Pay ³ ('000 EUR)	17,634
Number of employees ⁴	2,808

¹ Excluding social charges.

² Fixed Pay amount is based on Fixed Pay effective for all staff at AXA IM during the financial year under review prorated to the Fund's assets.

³ Variable Pay, prorated to the Fund's assets, composed of discretionary, upfront and deferred items, includes :

- Amounts awarded for the performance of the previous year and fully paid over the financial year under review (non-deferred variable pay);
- Amounts awarded for the performance of previous years and the performance of the year under review (deferred variable pay);
- Long-Term Incentives awarded by the AXA Group.

⁴ Number of employees includes Permanent and Temporary contracts excluding internship as at 31 December 2023.

Aggregate amount of remuneration paid and / or awarded to risk takers and senior management whose activities have a significant impact on the risk profile of portfolios, prorated to the Fund's assets ¹			
	Risk Takers	Senior Management	Total
Fixed Pay and Variable Pay ('000 EUR) ^{2 3}	9,929	4,438	14,367
Number of employees ⁴	277	62	339

¹ Excluding social charges.

² Fixed Pay amount is based on Fixed Pay effective for all staff at AXA IM during the financial year under review prorated to the Fund's assets.

³ Variable Pay, prorated to the Fund's assets, composed of discretionary, upfront and deferred items, includes:

- Amounts awarded for the performance of the previous year and fully paid over the financial year under review (non-deferred variable pay);
- Amounts awarded for the performance of previous years and the performance of the year under review (deferred variable pay);
- Long-Term Incentives awarded by the AXA Group.

⁴ Number of identified employees within AXA IM Group level and AXA IM as at 31 December 2023.

Risk Disclosures

Risk disclosure linked to CSSF circular 11/512

The commitment approach is used in the majority of AXA World Funds Sub-funds to calculate the global exposure, except for the following 6 Sub-funds for which an Absolute VaR method is used to measure the global exposure:

- AXA World Funds – ACT Multi Asset Optimal Impact
- AXA World Funds - Defensive Optimal Income
- AXA World Funds - Euro Credit Total Return
- AXA World Funds - Global Optimal Income
- AXA World Funds - Optimal Income
- AXA World Funds - US Enhanced High Yield Bonds

Please find below the parameters, features and results for the year from 1 January 2023 to 31 December 2023:

Sub-fund name	Method to calculate the global exposure	Type of Model	Parameters (1)				VaR levels over the period	VaR levels with ESMA parameters (2)	Average Leverage level reached (3)
			Confidence interval	Horizon	Observation period	Limit			
AXA World Funds - ACT Multi Asset Optimal Impact	Absolute VaR	Monte Carlo	95%	5 BD	1 year	7.00%	Max: 2.09% Min: 1.32% Average: 1.79%	Max: 5.91% Min: 3.74% Average: 5.05%	53.57%

Sub-fund name	Method to calculate the global exposure	Type of Model	Parameters (1)				VaR levels over the period	VaR levels with ESMA parameters (2)	Average Leverage level reached (3)
			Confidence interval	Horizon	Observation period	Limit			
AXA World Funds - Defensive Optimal Income	Absolute VaR	Monte Carlo	95%	5 BD	1 year	7.00%	Max: 1.77% Min: 0.97% Average: 1.31%	Max: 5.01% Min: 2.75% Average: 3.71%	97.35%

(1) Prospectus parameters.

(2) Results using the parameters defined by the ESMA guidelines 10/788 are expressed using an adjustment factor of 2.82863817.

(3) The calculation corresponds to the sum of the notional of the financial derivatives instruments the fund was invested in at a given moment divided by the AuM at the same moment.

Additional Unaudited Appendix

Securities Financing Transactions Regulation ("SFTR") Disclosures

Foreword

The SICAV may lend positions of its securities portfolio to third parties through different techniques whereas:

- Bilateral should be understood as trading executed directly with the counterparty and the collateral, managed by AXA Investment Managers GS Limited, is safe-kept at State Street Luxembourg S.C.A..
- Triparty should be understood as trading executed directly with the counterparty and collateral managed by a triparty agent who manages and safe-keep the collateral.
- CCP should be understood as Central Counterparties Clearing House.

Data on cost and return

The return from securities lending transactions is split between the relevant Fund and the agent lender. The Funds receive 65% while the agent lender receive 35% of the income, with all operational costs supported by the agent lender. The income earned by the Funds from securities lending transactions is disclosed in the Securities lending note (note 16).

Eligible collateral

Collateral received by a Sub-Fund may be used to reduce its counterparty risk exposure with a counterparty if it complies with the criteria listed in circulars issued by the CSSF from time to time in terms of liquidity, valuation, issuer credit quality, correlation, risks linked to the management of collateral and enforceability. In particular, collateral should comply with the following conditions:

- Any collateral received other than cash should be of high quality, highly liquid and traded on a regulated market or multilateral trading facility with transparent pricing in order that it can be sold quickly at a price that is close to pre-sale valuation.
- It should be valued on a daily basis on a mark-to-market price basis and assets that exhibit high price volatility should not be accepted as collateral unless suitably conservative haircuts are in place. Margin calls will be implemented in accordance with the terms negotiated in the collateral arrangements.
- It should be issued by an entity that is independent from the counterparty and is expected not to display a high correlation with the performance of the counterparty.
- It should be sufficiently diversified in terms of country, markets and issuers and shall not entail on an aggregate basis an exposure to a given issuer for more than 20% of its Net Asset Value. By way of derogation, a Sub-Fund may be fully collateralised in different Transferable Securities or Money Market Instruments issued or guaranteed by any of the Member States, one or more of their local authorities, a third party sovereign country such as Canada, Japan, Norway, Switzerland and the United States of America, or any public international body to which one or more Member State(s) belong(s) such as the European Investment Bank, provided that it receives such securities from at least six different issues and that securities from any single issue should not account for more than 30% of such Sub-Fund's Net Asset Value. The collateral shall further comply with the limits set forth above under section "b) Limitations on Control".

Additional Unaudited Appendix

Securities Financing Transactions Regulation ("SFTR") Disclosures (continued)

Foreword (continued)

- The financial guarantees received by the Sub-Fund will be kept by the Depositary or, failing that, by any third-party depositary (such as Euroclear Bank SA/NV) which is subject to a prudential supervision and that has no link with the guarantee provider. It should be capable of being fully enforced by the SICAV for the account of the Sub-Fund at any time without reference to or approval from the counterparty.

Eligible assets

As long as it complies with the above-mentioned conditions, the collateral may consist of (i) sovereign OECD bonds; and/or (ii) direct investment in bonds issued or guaranteed by first class issuers offering an adequate liquidity or shares listed or dealt on a Regulated Market of a Member State of the European Union or on a stock exchange of a member state of the OECD provided that they are included in a main index.

Sustainable Finance Disclosure Regulation (“SFDR”) Disclosures

The sub-fund listed below is a financial product that neither promotes environmental and/or social characteristics nor has a sustainable investment objective within the meaning of the articles 8 and 9 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial sector.

Nevertheless, it follows sectorial exclusion policies covering controversial weapons, soft commodities, climate risks, and ecosystem protection & deforestation. In 2022, AXA IM extended this policy to cover investments incorporating significant land use controversies and responsible for biodiversity loss in relation to soy, cattle and timber.

AXA World Funds - US Dynamic High Yield Bonds

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT BIODIVERSITY (the "Financial Product")

Entity LEI: 213800NEL6BAVXHBH781

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 58.38%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 38.34%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Product & services score on SDG 6, 12, 14, 15

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Product & services score on SDG 6, 12, 14, 15	1.33 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))		

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

● **... And Compared to Previous Periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Product & services score on SDG 6,12, 14, 15	2022	1.64 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	-0.13 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	94.54 %

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other

factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM's exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	34.38
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO)

Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 9173.95
Ecosystem protection & Deforestation policy			Scope 2: 2215.999 Scope 3: 65623.406 Scope 1+2: 11389.949 Scope 1+2+3: 76853.625
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 69.38
Ecosystem protection & Deforestation policy			Scope 1+2+3: 447.287
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1894.879
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	1.53
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 76.23
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	2.74
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	34.38
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
XYLEM INC XNYS USD	Manufacture of machinery and equipment n.e.c.	4.34%	US
REPUBLIC SERVICES INC XNYS USD	Waste collection, treatment and disposal activities; materials recovery	3.84%	US
ECOLAB INC XNYS USD	Manufacture of chemicals and chemical products	3.6%	US
AGILENT TECHNOLOGIES INC XNYS USD	Manufacture of computer, electronic and optical products	3.39%	US
DEERE & CO XNYS USD	Manufacture of machinery and equipment n.e.c.	3.32%	US
DARLING INGREDIENTS INC XNYS USD	Manufacture of food products	3.26%	US
THERMO FISHER SCIENTIFIC INC XNYS USD	Manufacture of computer, electronic and optical products	3.15%	US
TRIMBLE INC XNGS USD	Manufacture of computer, electronic and optical products	3.04%	US
Portfolio 97379 USD SET SSX	Other	2.99%	N/A
BALL CORP XNYS USD	Manufacture of fabricated metal products, except machinery and equipment	2.96%	US
VALMONT INDUSTRIES XNYS USD	Manufacture of fabricated metal products, except machinery and equipment	2.93%	US
DANAHER CORP XNYS USD	Manufacture of computer, electronic and optical products	2.92%	US
VERALLIA XPAR EUR	Manufacture of other non-metallic mineral products	2.88%	FR
HALMA PLC XLON GBP	Manufacture of computer, electronic and optical products	2.77%	GB
AECOM XNYS USD	Architectural and engineering activities; technical testing and analysis	2.6%	US

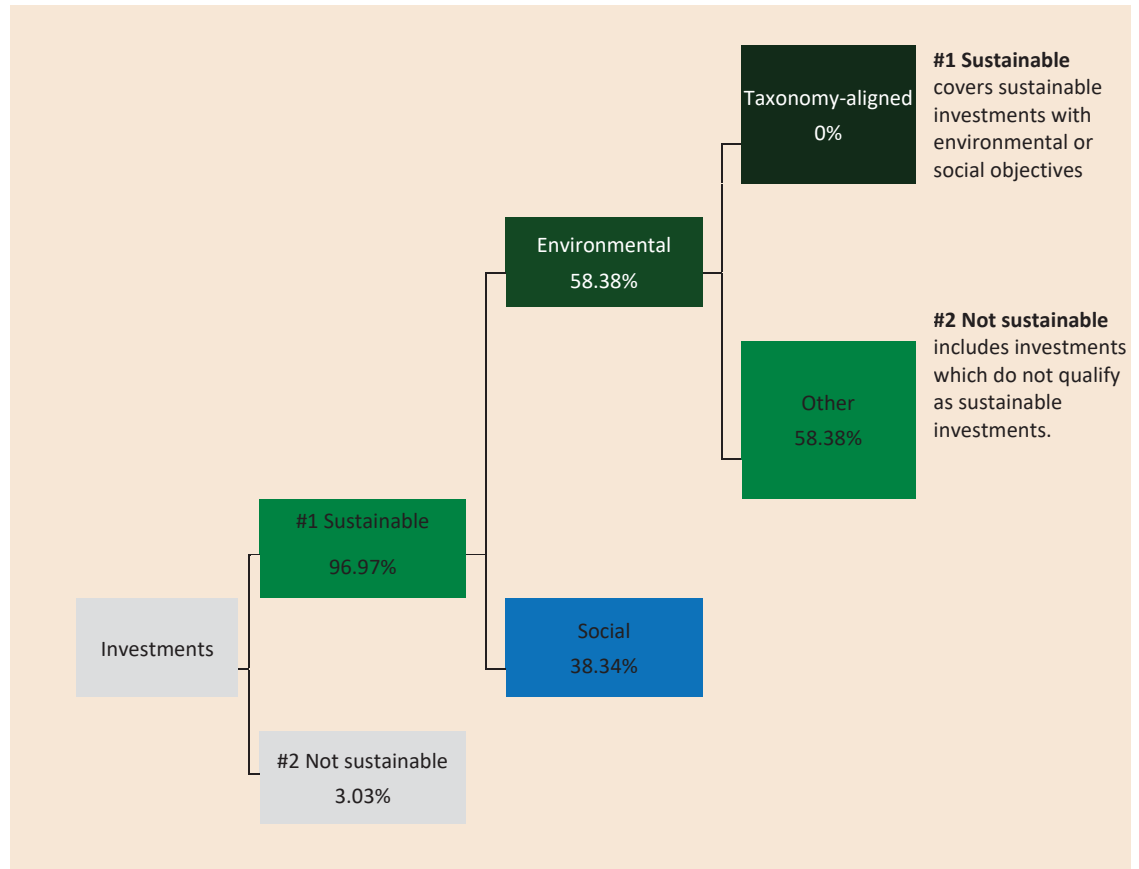

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of computer, electronic and optical products	18.98%
Manufacture of machinery and equipment n.e.c.	18.01%
Manufacture of chemicals and chemical products	10.7%
Architectural and engineering activities; technical testing and analysis	7.7%
Waste collection, treatment and disposal activities; materials recovery	7.54%
Manufacture of food products	6.54%
Manufacture of paper and paper products	6.41%
Manufacture of fabricated metal products, except machinery and equipment	5.89%

Retail trade, except of motor vehicles and motorcycles	3.34%
Other	3.06%
Manufacture of other non-metallic mineral products	2.88%
Water collection, treatment and supply	2.75%
Publishing activities	2.63%
Crop and animal production, hunting and related service activities	1.35%
Information service activities	0.75%
Manufacture of rubber and plastic products	0.63%
Mining of metal ores	0.48%
Civil engineering	0.36%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the “do not significantly harm” criteria of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

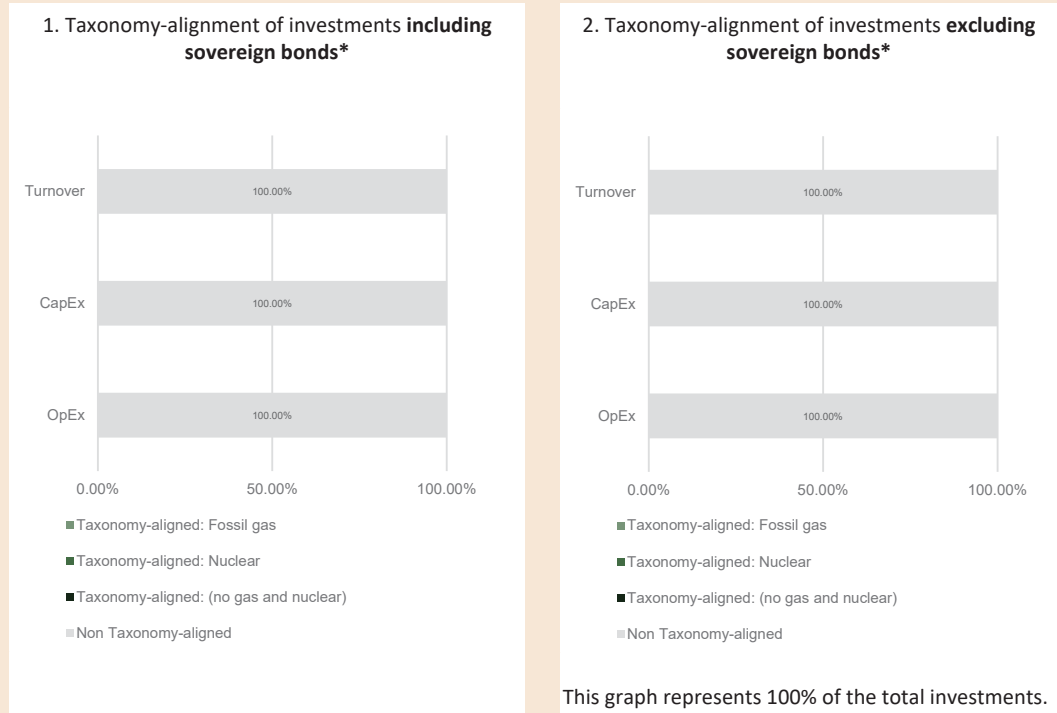

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. Therefore, the share of investments made in transitional and enabling activities is 0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 58.38% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 38.34 % of sustainable investments with a social objective.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**

Investments included under “not sustainable” represented 3.03% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (iii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT CLEAN ECONOMY (the "Financial Product") Entity LEI: 213800YSFEN3TI97J121

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 64.01%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 33.41%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Renewable Energy Production
- % of companies in the GSS Watchlist & Non-compliant

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Renewable Energy Production	1234 of megawatt hours of renewable energy produced per million euros invested using the EVIC		
% of companies in the GSS Watchlist & Non-compliant	7.18 % of invested companies in the GSS Watchlist & Non-compliant		

N.B.: While Sustainability KPIs (including regarding sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. However, given that the volatility of the data is relatively low overall for KPI over the past year, we estimate that comparison of sustainability KPI between the financial product and its benchmark (which does not apply to sustainable investment-related indicators) is relevant and sufficiently accurate.”

● **... And Compared to Previous Periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Delta Technology Opportunity (1.5C)	2022	24.65 % of the invested company’s market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable	4.27 % of the invested company’s market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable	97.96 %

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		General Equilibrium (AIM/CGE) model	General Equilibrium (AIM/CGE) model	
--	--	-------------------------------------	-------------------------------------	--

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM's sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM's exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts ("PAIs") indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under -5 on any SDG (on a scale from +10 corresponding to 'significant contributing impact' to -10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 4138.3 Scope 2: 1672.275 Scope 3: 103451.25 Scope 1+2: 5810.575 Scope 1+2+3: 108855.844

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A
------------------------------	---	------------------	-----

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 4138.3

THERMO FISHER SCIENTIFIC INC XNYS USD	Manufacture of computer, electronic and optical products	2.14%	US
DEERE & CO XNYS USD	Manufacture of machinery and equipment n.e.c.	2.1%	US
NATIONAL GRID PLC XLON GBP	Electricity, gas, steam and air conditioning supply	2.09%	GB

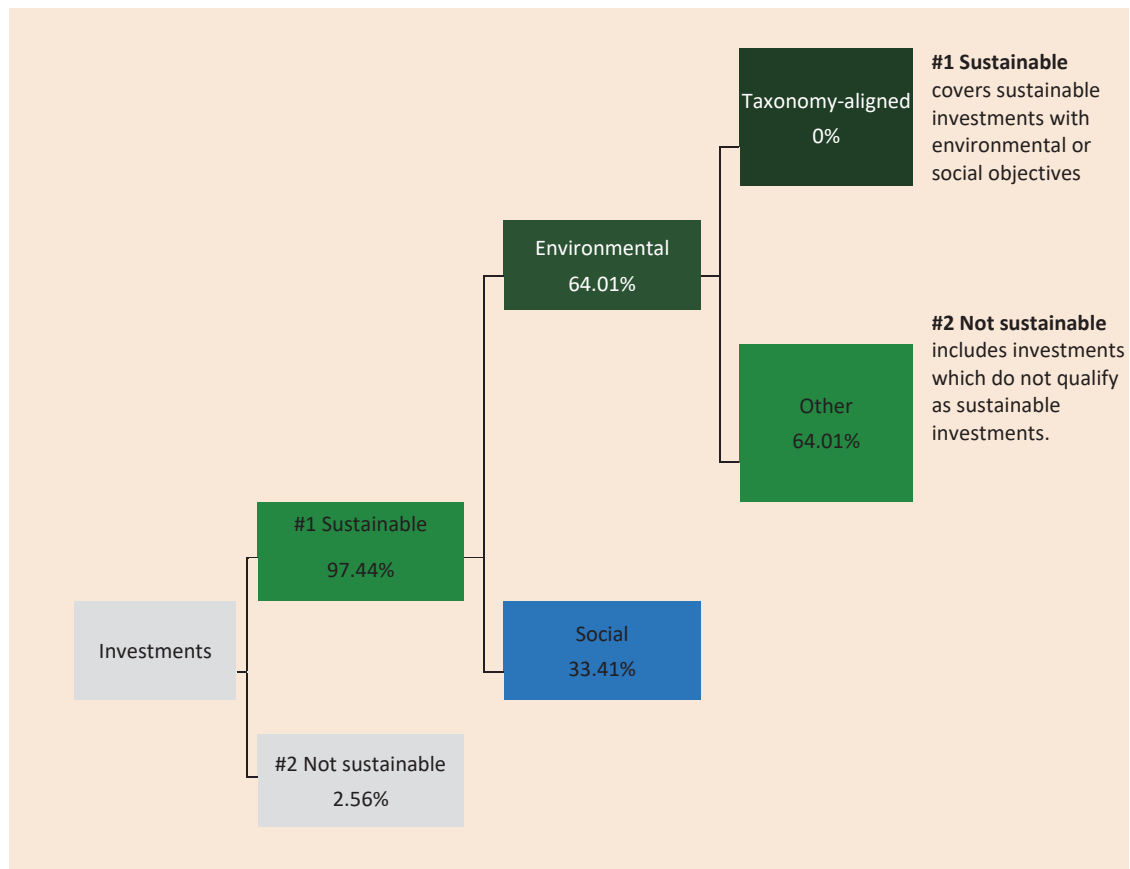

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of electrical equipment	16.76%
Manufacture of computer, electronic and optical products	16.33%
Manufacture of machinery and equipment n.e.c.	12.08%

Electricity, gas, steam and air conditioning supply	10.27%
Manufacture of chemicals and chemical products	6.67%
Manufacture of motor vehicles, trailers and semi-trailers	6.24%
Publishing activities	6.08%
Waste collection, treatment and disposal activities; materials recovery	5.88%
Manufacture of food products	4.13%
Architectural and engineering activities; technical testing and analysis	3.94%
Civil engineering	3.48%
Other	2.52%
Real estate activities	1.8%
Computer programming, consultancy and related activities	1.23%
Manufacture of paper and paper products	1.05%
Crop and animal production, hunting and related service activities	0.78%
Manufacture of fabricated metal products, except machinery and equipment	0.52%
Mining of metal ores	0.23%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the “do not significantly harm” criteria of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

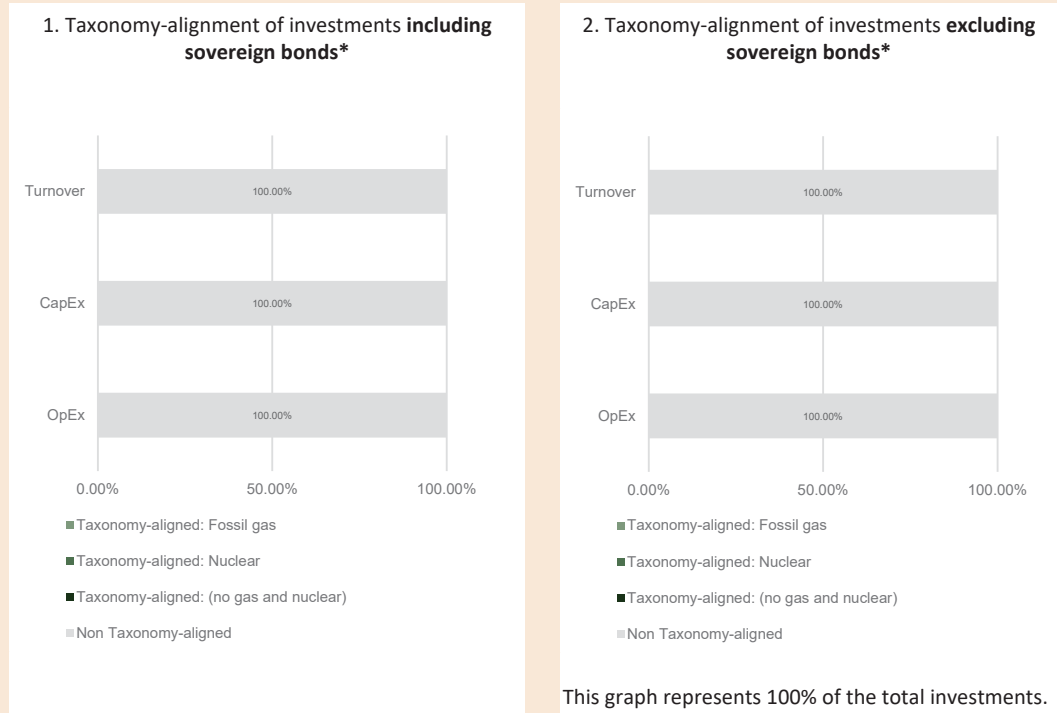

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. Therefore, the share of investments made in transitional and enabling activities is 0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 64.01% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 33.41 % of sustainable investments with a social objective.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**

Investments included under “not sustainable” represented 2.56% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT Entity LEI: 213800MBHN2GOTB7P804
 DYNAMIC GREEN BONDS (the "Financial Product")

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 94.49%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 2.66%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- % of Green Bonds

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives. It has considered climate mitigation; climate adaptation objective.

How did the sustainability indicators perform?

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability KPI Name	Value	Coverage
% of Green Bonds	92.55 % of NAV invested in green bonds	97.15 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And Compared to Previous Periods?

Sustainability KPI Name	Year	Value	Coverage
% Green Bonds	2022	96 % of NAV invested in green bonds	100 %

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 952.155 Scope 2: 213.21 Scope 3: 4844.138 Scope 1+2: 1165.365 Scope 1+2+3: 5920.842
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 60.468 Scope 1+2+3: 212.121

	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1339.073
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	13.94
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 56.52 Energy Production: 53.12
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 1.742 Sector NACE D: 3.972 Sector NACE E: 0.889 Sector NACE F: 0.236 Sector NACE L: 0.425
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	7.92
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.023
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.215

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	12.59 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	17.61%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	34.76
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 952.155
Ecosystem protection & Deforestation policy			Scope 2: 213.21 Scope 3: 4844.138 Scope 1+2: 1165.365 Scope 1+2+3: 5920.842
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 60.468
Ecosystem protection & Deforestation policy			Scope 1+2+3: 212.121
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1339.073
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	13.94
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 56.52 Energy Production: 53.12
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	7.92
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	34.76
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
DBR 2.3% - 15/02/2033	Public administration and defence; compulsory social security	6.99%	DE
Portfolio 95984 USD SET SSX	Other	4.2%	N/A
RAGB 2.9% - 23/05/2029	Public administration and defence; compulsory social security	3%	AT
DB 1.875% Var - 23/02/2028 Call	Financial service activities, except insurance and pension funding	1.74%	DE
KOF 1.85% - 01/09/2032 Call	Manufacture of beverages	1.65%	MX
CHILE 3.5% - 25/01/2050 Call	Public administration and defence; compulsory social security	1.57%	CL
REESM 4.625% Var - 07/05/2028 Perp	Electricity, gas, steam and air conditioning supply	1.55%	ES

GM 5.4% - 15/10/2029 Call	Manufacture of motor vehicles, trailers and semi-trailers	1.42%	US
INDOIS 4.7% - 06/06/2032	Public administration and defence; compulsory social security	1.41%	ID

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

CABKSM 1.25% Var - 18/06/2031 Call	Financial service activities, except insurance and pension funding	1.39%	ES
TELEFO 2.502% Var - 05/02/2027 Perp	Telecommunications	1.37%	NL

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	21.22%
Electricity, gas, steam and air conditioning supply	19.01%

Financial service activities, except insurance and pension funding	18.46%
Insurance, reinsurance and pension funding, except compulsory social security	6.77%
Real estate activities	6.68%
Manufacture of motor vehicles, trailers and semi-trailers	4.96%
Telecommunications	4.67%
Other	4.51%
Manufacture of paper and paper products	2.29%
Accommodation	2.26%
Land transport and transport via pipelines	1.67%
Manufacture of beverages	1.65%
Manufacture of computer, electronic and optical products	1.1%
Water collection, treatment and supply	1.09%
Manufacture of machinery and equipment n.e.c.	0.89%
Civil engineering	0.88%
Waste collection, treatment and disposal activities; materials recovery	0.72%
Manufacture of fabricated metal products, except machinery and equipment	0.72%
Activities of extraterritorial organisations and bodies	0.44%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives and the “do not significantly harm” principles. It invested in activities following the climate mitigation; climate adaptation objectives of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

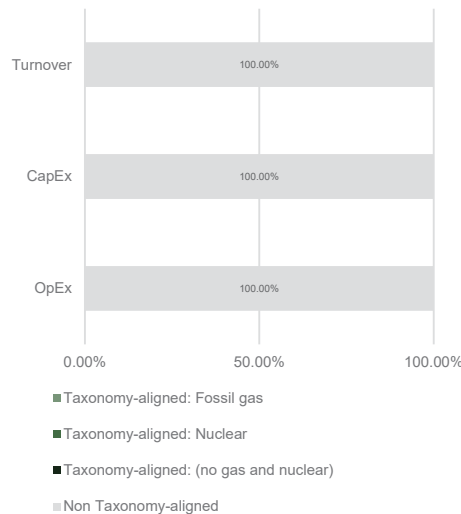

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was aligned to EU Taxonomy at 29.37% of its NAV for the period of reference, compared to 39.65% for prior year period.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 65.12% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 2.66 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under "not sustainable" represented 3.84% of the Net Asset Value of the product.

The "not sustainable" assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money

market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WF ACT Emerging Markets Bonds (the "Financial Product") Entity LEI: 2138002YCDGI8HHQT070

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 54.91%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 43.58%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainability indicators perform?

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	220.31 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	571.34 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	94,87%
Water Intensity	15237.29 Thousands of cubic meters for corporates	17675.55 Thousands of cubic meters for corporates	88,68%

N.B.: While Sustainability KPIs (including regarding sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. However, given that the volatility of the data is relatively low overall for KPI over the past year, we estimate that comparison of sustainability KPI between the financial product and its benchmark (which does not apply to sustainable investment-related indicators) is relevant and sufficiently accurate.”

... And Compared to Previous Periods?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 1901.268 Scope 2: 875.21 Scope 3: 13715.674 Scope 1+2: 2776.478 Scope 1+2+3: 16233.357

Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 94.26 Scope 1+2+3: 278.088
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1175.384
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	3.22
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 65.16
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 1.716 Sector NACE D: 13.345 Sector NACE G: 0.075 Sector NACE H: 0.4 Sector NACE L: 0.48
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	3.86
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.281
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	35.58

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	14.94 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	27.92%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	18.11

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A
------------------------------	---	------------------	-----

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 1901.268
Ecosystem protection & Deforestation policy			Scope 2: 875.21 Scope 3: 13715.674 Scope 1+2: 2776.478 Scope 1+2+3: 16233.357
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 94.26
Ecosystem protection & Deforestation policy			Scope 1+2+3: 278.088
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1175.384
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	3.22
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 65.16
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	3.86

ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	18.11
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
URUGUA 5.75% - 28/10/2034 Call	Public administration and defence; compulsory social security	4.75%	UY
ISRAEL 4.5% - 17/01/2033	Public administration and defence; compulsory social security	4.17%	IL
MIVIVI 4.625% - 12/04/2027 Call	Financial service activities, except insurance and pension funding	3.55%	PE
REPHUN 1.75% - 05/06/2035	Public administration and defence; compulsory social security	3.25%	HU
PERU 3% - 15/01/2034 Call	Public administration and defence; compulsory social security	3.11%	PE
QTELQD 3.875% - 31/01/2028	Telecommunications	2.92%	BM
KOF 1.85% - 01/09/2032 Call	Manufacture of beverages	2.81%	MX
GUATEM 5.375% - 24/04/2032 Call	Public administration and defence; compulsory social security	2.43%	GT
AMXLMM 6.375% - 01/03/2035	Telecommunications	2.42%	MX
MALAYS 2.07% - 28/04/2031	Public administration and defence; compulsory social security	2.29%	MY
SERBIA 1% - 23/09/2028	Public administration and defence; compulsory social security	2.28%	RS

MEX 4.875% - 19/05/2033 Call	Public administration and defence; compulsory social security	2.27%	MX
TAISEM 3.875% - 22/04/2027 Call	Manufacture of machinery and equipment n.e.c.	2.17%	US
CMPCCI 4.375% - 04/04/2027	Manufacture of paper and paper products	2%	CL
INDON 1.3% - 23/03/2034 Call	Public administration and defence; compulsory social security	1.95%	ID

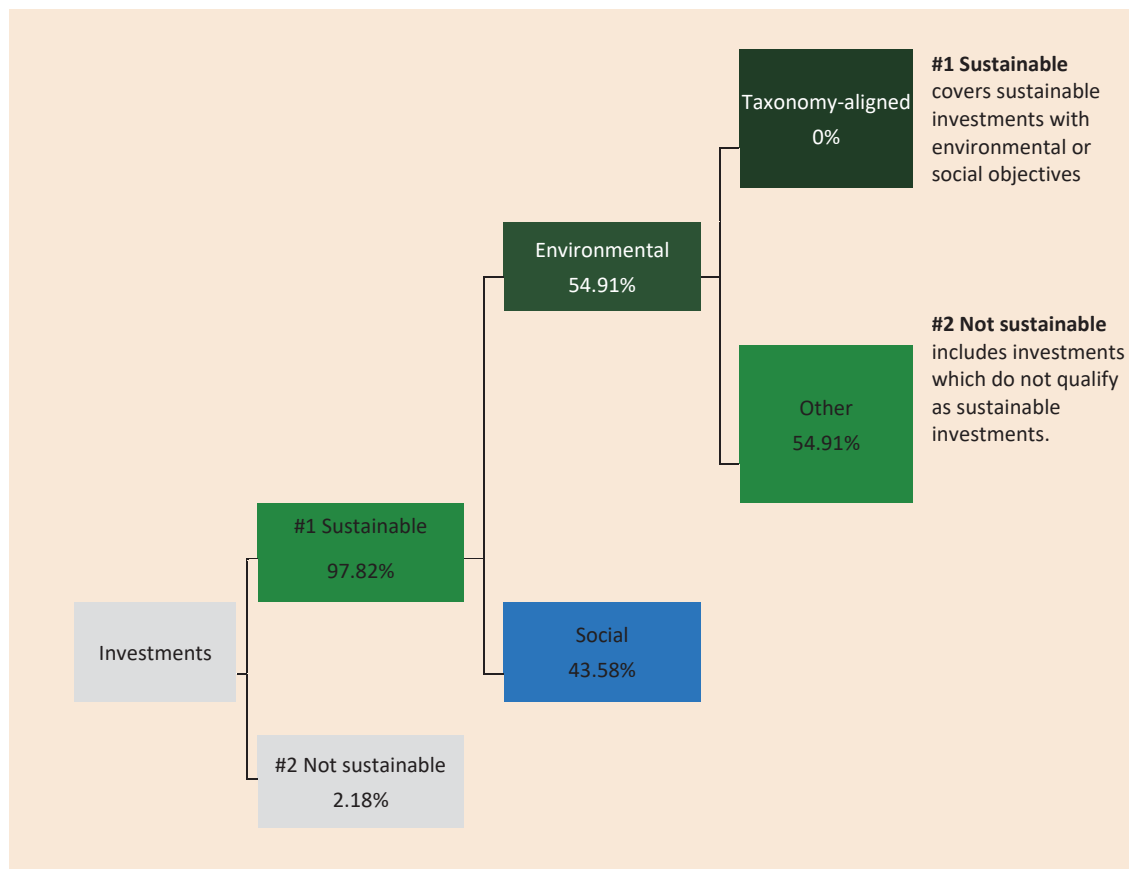

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
------------	------------

Public administration and defence; compulsory social security	40.24%
Telecommunications	12.3%
Financial service activities, except insurance and pension funding	10.26%
Manufacture of computer, electronic and optical products	4.67%
Real estate activities	3.91%
Electricity, gas, steam and air conditioning supply	3.41%
Retail trade, except of motor vehicles and motorcycles	3.15%
Land transport and transport via pipelines	3.07%
Manufacture of beverages	2.81%
Manufacture of machinery and equipment n.e.c.	2.17%
Other	2.16%
Manufacture of paper and paper products	2%
Manufacture of food products	1.85%
Warehousing and support activities for transportation	1.76%
Manufacture of electrical equipment	1.54%
Civil engineering	0.92%
Crop and animal production, hunting and related service activities	0.92%
Activities of extraterritorial organisations and bodies	0.87%
Office administrative, office support and other business support activities	0.87%
Mining of metal ores	0.79%
Water collection, treatment and supply	0.55%
Manufacture of chemicals and chemical products	-0.21%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the “do not significantly harm” criteria of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

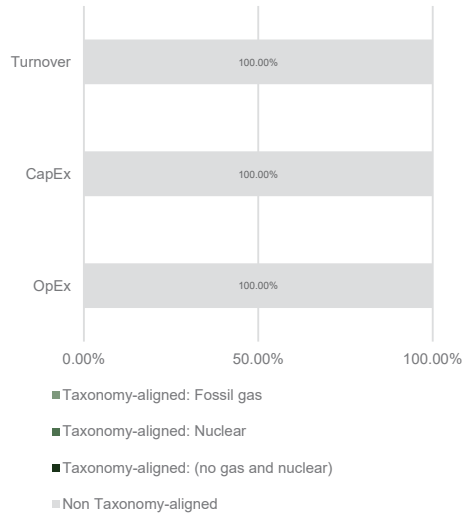

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. Therefore, the share of investments made in transitional and enabling activities is 0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 54.91% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 43.58 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under "not sustainable" represented 2.18% of the Net Asset Value of the product.

The "not sustainable" assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,

- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT
EMERGING MARKETS SHORT DURATION BONDS
LOW CARBON (the "Financial Product")

Entity LEI: 2138006QV9ITIYYGQQ04

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 41.27% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product uses an ‘extra-financial indicator improvement’ approach, and outperformed Carbon intensity by at least 20% compared to its Benchmark 75% J. P. Morgan Corporate Emerging Market Bond Broad Diversified + 25% J. P. Morgan Emerging Market Bond Global Diversified during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	190.52 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	578.82 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	90.68 %
Water Intensity	5950.64 Thousands of cubic meters for corporates	24012.8 Thousands of cubic meters for corporates	82.3 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	193.92 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	688.91 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	80.45 %
Water intensity	2022	6485.75 Thousands of cubic meters for corporates	37094.33 Thousands of cubic meters for corporates	71.61 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 9101.813 Scope 2: 5927.361 Scope 3: 127553.445 Scope 1+2: 15029.175 Scope 1+2+3: 141180.25
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 85.447 Scope 1+2+3: 395.804
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1418.4

Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	4.76
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.155
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	292.518

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	17.06 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	24.06%
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	21
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 9101.813
Ecosystem protection & Deforestation policy			Scope 2: 5927.361 Scope 3: 127553.445 Scope 1+2: 15029.175 Scope 1+2+3: 141180.25
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 85.447
Ecosystem protection & Deforestation policy			Scope 1+2+3: 395.804
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1418.4
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	2.45
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	4.76
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
AXA WF Asian Short Duration Bonds M Capitalisation	Financial service activities, except insurance and pension funding	2.49%	LU
Stand Alone 53906 USD SET SSX	Other	2.36%	N/A
DOMREP 5.5% - 27/01/2025	Public administration and defence; compulsory social security	2.29%	DO
IVYCST 6.375% - 03/03/2028 Sink	Public administration and defence; compulsory social security	2.18%	CI
PARGUY 4.7% - 27/03/2027	Public administration and defence; compulsory social security	1.82%	PY
CHILE 3.125% - 27/03/2025	Public administration and defence; compulsory social security	1.81%	CL
AXA WF Asian High Yield Bonds M Capitalisation USD	Financial service activities, except insurance and pension funding	1.69%	LU
MEX 3.9% - 27/04/2025 Call	Public administration and defence; compulsory social security	1.64%	MX
QNBK 1.625% - 22/09/2025	Financial service activities, except insurance and pension funding	1.57%	KY
CELARA 3.875% - 02/11/2027 Call	Manufacture of paper and paper products	1.57%	CL
BAP 2.75% - 17/06/2025 Call	Financial service activities, except insurance and pension funding	1.42%	PE
CMPPCI 4.75% - 15/09/2024 Call	Manufacture of paper and paper products	1.39%	CL
COSTAR 4.375% - 30/04/2025	Public administration and defence; compulsory social security	1.38%	CR
ANGSJ 3.375% - 01/11/2028 Call	Mining of metal ores	1.33%	GB
UZBEK 4.75% - 20/02/2024	Public administration and defence; compulsory social security	1.33%	UZ

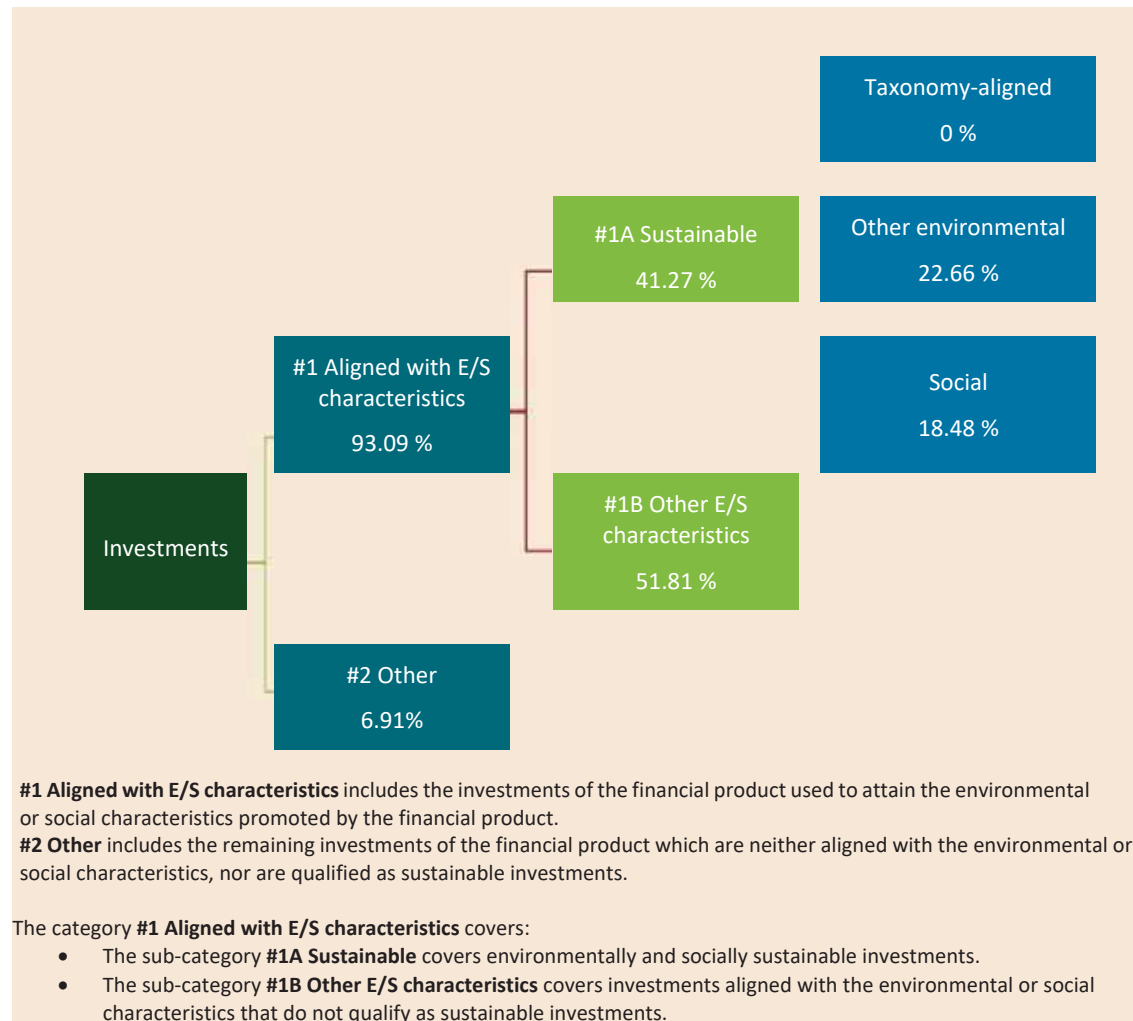

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	32.83%
Financial service activities, except insurance and pension funding	19.56%
Mining of metal ores	6.06%
Electricity, gas, steam and air conditioning supply	4.57%
Telecommunications	4.49%
Real estate activities	4.43%
Manufacture of paper and paper products	4.31%
Other	3.32%
Civil engineering	2.1%
Manufacture of motor vehicles, trailers and semi-trailers	1.99%
Retail trade, except of motor vehicles and motorcycles	1.85%
Information service activities	1.53%
Land transport and transport via pipelines	1.26%
Manufacture of computer, electronic and optical products	1.08%
Office administrative, office support and other business support activities	1.06%
Manufacture of machinery and equipment n.e.c.	0.97%
Manufacture of beverages	0.91%
Mining support service activities	0.84%
Manufacture of electrical equipment	0.81%
Activities of extraterritorial organisations and bodies	0.81%
Water collection, treatment and supply	0.78%
Crop and animal production, hunting and related service activities	0.76%
Manufacture of food products	0.7%
Gambling and betting activities	0.67%
Accommodation	0.5%
Warehousing and support activities for transportation	0.48%
Extraction of crude petroleum and natural gas	0.44%
Manufacture of chemicals and chemical products	0.42%
Manufacture of coke and refined petroleum products	0.3%
Manufacture of textiles	0.09%

Repair and installation of machinery and equipment	0.07%
--	-------

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 22.66% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 18.48% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 6.91% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT EUROPE EQUITY (the "Financial Product") Entity LEI: 213800NQDIOBLYXLZ43

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 50.58%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 48.16%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon intensity
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	146.48 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	147.72 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.82 %
Women on Board	42.17 % of women on board	41.24 % of women on board	98.31 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

● **... And Compared to Previous Periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	150.47 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	199.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.83 %

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 9217.304 Scope 2: 3330.712 Scope 3: 232289.203 Scope 1+2: 12548.016 Scope 1+2+3: 244519.094

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation

methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 9217.304
Ecosystem protection & Deforestation policy			Scope 2: 3330.712 Scope 3: 232289.203 Scope 1+2: 12548.016 Scope 1+2+3: 244519.094
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 41.207
Ecosystem protection & Deforestation policy			Scope 1+2+3: 821.762
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1454.862
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	12.55
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 50.78 Energy Production: 57.21
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	3.43
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	42.32
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	5.16%	NL
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.48%	GB
BNP PARIBAS XPAR EUR	Financial service activities, except insurance and pension funding	4.04%	FR
NESTLE SA-REG XSWX CHF	Manufacture of food products	3.75%	CH
NOVO NORDISK A/S-B XCSE DKK	Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.35%	DK
DEUTSCHE TELEKOM AG-REG XETR EUR	Telecommunications	3.26%	DE
BP PLC XLON GBP	Manufacture of coke and refined petroleum products	2.98%	GB
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	2.91%	FR
BANCO SANTANDER SA XMAD EUR	Financial service activities, except insurance and pension funding	2.79%	ES
SSE PLC XLON GBP	Electricity, gas, steam and air conditioning supply	2.74%	GB
ROCHE HOLDING AG-GENUSSCHEIN XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.57%	CH

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	2.49%	FR
ALLIANZ SE-REG XETR EUR	Insurance, reinsurance and pension funding, except compulsory social security	2.45%	DE
STELLANTIS NV XPAR EUR	Manufacture of motor vehicles, trailers and semi- trailers	2.44%	NL
AIR LIQUIDE SA XPAR EUR	Manufacture of chemicals and chemical products	2.4%	FR

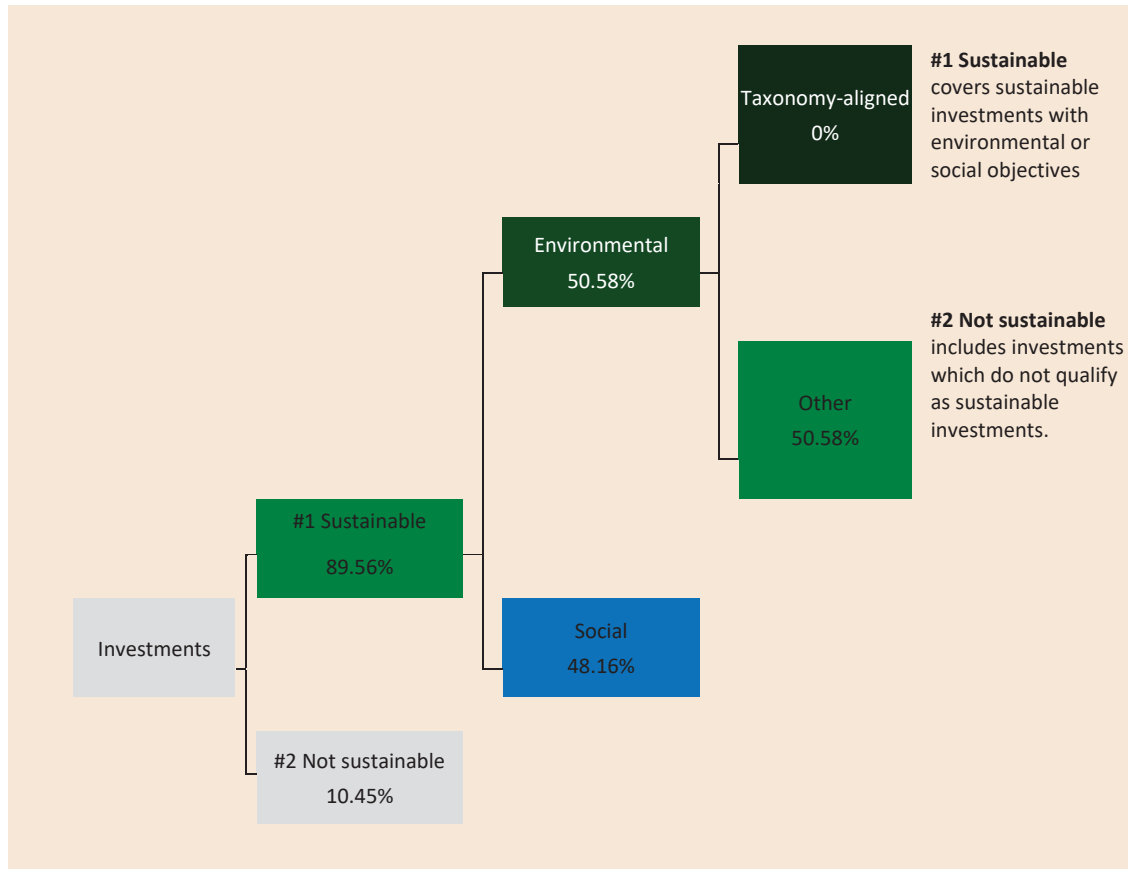

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	14.08%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	11.63%
Manufacture of machinery and equipment n.e.c.	8.21%
Manufacture of food products	5.54%
Manufacture of chemicals and chemical products	5.2%
Manufacture of electrical equipment	4.96%
Electricity, gas, steam and air conditioning supply	4.7%
Manufacture of coke and refined petroleum products	4.13%
Publishing activities	3.96%

Manufacture of motor vehicles, trailers and semi-trailers	3.41%
Telecommunications	3.26%
Information service activities	3.15%
Insurance, reinsurance and pension funding, except compulsory social security	3.01%
Activities auxiliary to financial services and insurance activities	2.64%
Manufacture of paper and paper products	2.36%
Rental and leasing activities	2.09%
Advertising and market research	2%
Manufacture of leather and related products	1.96%
Manufacture of computer, electronic and optical products	1.85%
Food and beverage service activities	1.8%
Human health activities	1.58%
Scientific research and development	1.42%
Manufacture of beverages	1.29%
Civil engineering	1.22%
Computer programming, consultancy and related activities	1.2%
Water collection, treatment and supply	0.56%
Manufacture of other non-metallic mineral products	0.44%
Postal and courier activities	0.41%
Manufacture of rubber and plastic products	0.38%
Manufacture of wearing apparel	0.38%
Retail trade, except of motor vehicles and motorcycles	0.36%
Legal and accounting activities	0.36%
Security and investigation activities	0.31%
Other	0.17%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the “do not significantly harm” criteria of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. Therefore, the share of investments made in transitional and enabling activities is 0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 50.58% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 48.16 % of sustainable investments with a social objective.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**

Investments included under “not sustainable” represented 10.45% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (iii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT Entity LEI: 213800LKVZ3UIPDE25
 EUROPEAN HIGH YIELD BONDS LOW CARBON (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 60.47% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product uses an 'extra-financial indicator improvement' approach, and outperformed Carbon intensity by at least 20% compared to its Benchmark ICE BofA European Currency High Yield Hedged EUR during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	85.95 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	186.11 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	90.47 %
Water Intensity	633.49 Thousands of cubic meters for corporates	10309.7 Thousands of cubic meters for corporates	90.47 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	91.24 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	303.12 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	90.11 %
Water intensity	2022	694.25 Thousands of cubic meters for corporates	23961.24 Thousands of cubic meters for corporates	90.11 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 1189.163 Scope 2: 505.134 Scope 3: 49663.898 Scope 1+2: 1694.297 Scope 1+2+3: 51271.211

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.546 Sector NACE F: 0.001 Sector NACE G: 0.036 Sector NACE H: 0.059 Sector NACE L: 0.303
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	N/A
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.001
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.17

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	26.53 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	13.04%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	36.14
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 1189.163
Ecosystem protection & Deforestation policy			Scope 2: 505.134 Scope 3: 49663.898 Scope 1+2: 1694.297 Scope 1+2+3: 51271.211
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 42.615

Portfolio 95981 EUR SET SSD	Other	2.01%	N/A

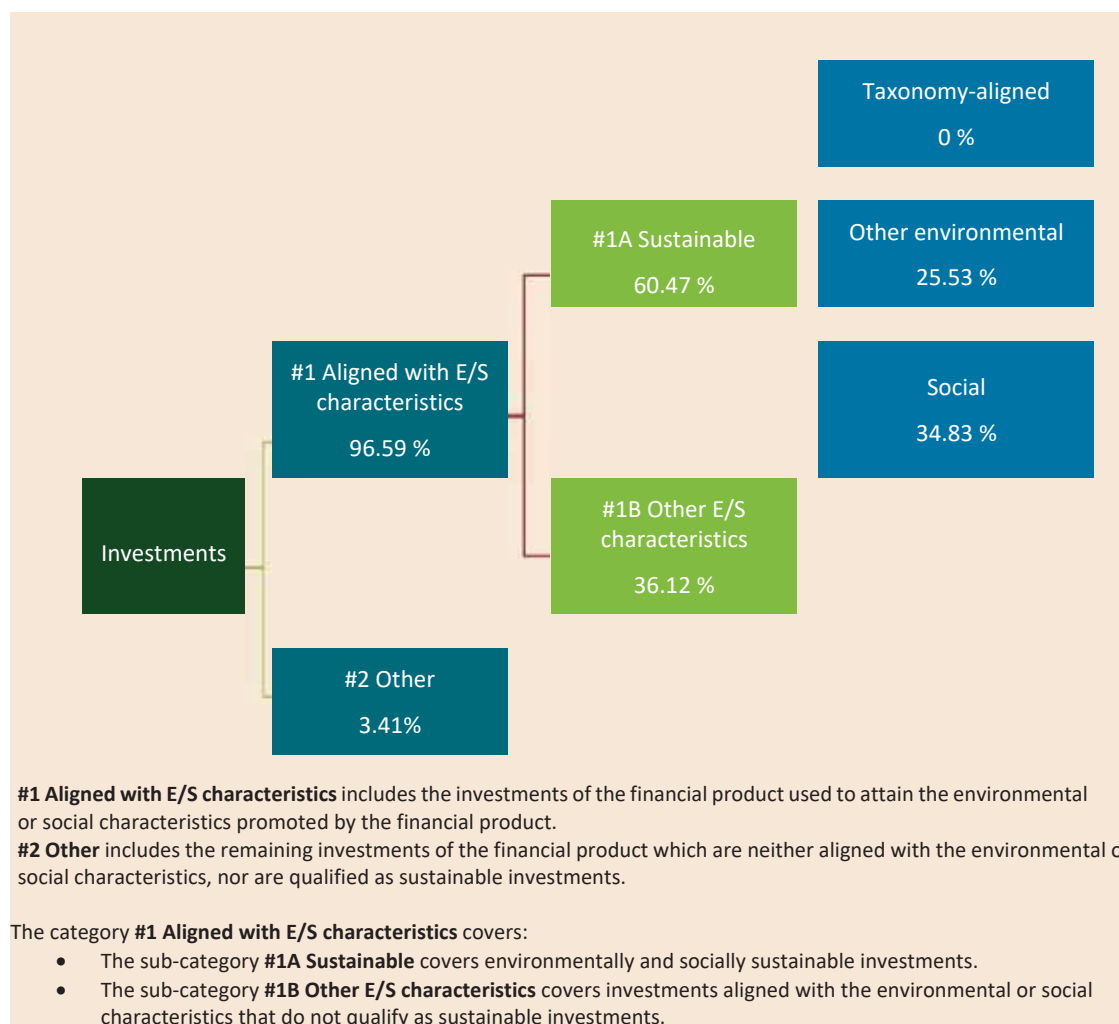

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Telecommunications	17.24%
Financial service activities, except insurance and pension funding	14.02%
Manufacture of motor vehicles, trailers and semi-trailers	6.84%
Real estate activities	5.2%
Human health activities	5.17%
Gambling and betting activities	4.81%
Manufacture of chemicals and chemical products	3.86%
Insurance, reinsurance and pension funding, except compulsory social security	3.55%
Civil engineering	3.25%
Warehousing and support activities for transportation	3.21%
Manufacture of paper and paper products	3.19%
Manufacture of electrical equipment	3.19%
Office administrative, office support and other business support activities	3.06%
Retail trade, except of motor vehicles and motorcycles	3.01%
Publishing activities	2.96%
Other	2.87%
Information service activities	2.12%
Waste collection, treatment and disposal activities; materials recovery	1.92%
Manufacture of fabricated metal products, except machinery and equipment	1.9%
Scientific research and development	1.9%
Manufacture of other transport equipment	1.3%
Architectural and engineering activities; technical testing and analysis	1.2%
Repair and installation of machinery and equipment	1.02%
Wholesale trade, except of motor vehicles and motorcycles	0.96%
Rental and leasing activities	0.88%
Other manufacturing	0.87%
Manufacture of beverages	0.28%
Computer programming, consultancy and related activities	0.23%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 25.53% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 34.83% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 3.41% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT EUROZONE EQUITY (the "Financial Product")

Entity LEI: 2138003LLF1182XFON77

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 51.79%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 45.54%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon intensity
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	157.85 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	150.66 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Women on Board	43.01 % of women on board	41.98 % of women on board	97.65 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

● **... And Compared to Previous Periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	168.8 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	240.09 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.99 %
Women on Board	2022	42.84 % of women on board	40.77 % of women on board	99.43 %

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 6879.646 Scope 2: 3532.293 Scope 3: 220169.75 Scope 1+2: 10411.939 Scope 1+2+3: 230471.609
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 48.862 Scope 1+2+3: 1083.259

	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1875.298
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	12.2
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 53.68 Energy Production: 42.92
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.352 Sector NACE D: 2.658 Sector NACE E: 4.15 Sector NACE F: 0.249 Sector NACE G: 0.439
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	6.03
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.044
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.983

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	13.4 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	11.55%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	43.34
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 6879.646
Ecosystem protection & Deforestation policy			Scope 2: 3532.293 Scope 3: 220169.75 Scope 1+2: 10411.939 Scope 1+2+3: 230471.609
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 48.862
Ecosystem protection & Deforestation policy			Scope 1+2+3: 1083.259
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1875.298
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	12.2
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 53.68 Energy Production: 42.92
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	6.03
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	43.34
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	7.44%	NL
BNP PARIBAS XPAR EUR	Financial service activities, except insurance and pension funding	3.98%	FR
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	3.97%	FR
L'OREAL XPAR EUR	Manufacture of chemicals and chemical products	3.84%	FR
AIR LIQUIDE SA XPAR EUR	Manufacture of chemicals and chemical products	3.6%	FR
IBERDROLA SA XMAD EUR	Electricity, gas, steam and air conditioning supply	3.4%	ES
SIEMENS AG-REG XETR EUR	Manufacture of electrical equipment	3.03%	DE
ESSILORLUXOTTICA XPAR EUR	Other manufacturing	2.92%	FR
INTESA SANPAOLO MTAA EUR	Financial service activities, except insurance and pension funding	2.85%	IT
ERSTE GROUP BANK AG XWBO EUR	Financial service activities, except insurance and pension funding	2.4%	AT
NESTE OYJ XHEL EUR	Manufacture of coke and refined petroleum products	2.27%	FI
Portfolio EUR SET SXX	Other	2.27%	N/A
FINECOBANK SPA MTAA EUR	Financial service activities, except insurance and pension funding	2.21%	IT

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

INFINEON TECHNOLOGIES AG XETR EUR	Manufacture of computer, electronic and optical products	2.1%	DE
RELX PLC XAMS EUR	Information service activities	2.07%	GB

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	13.61%
Manufacture of chemicals and chemical products	11.77%
Manufacture of electrical equipment	10.93%

Manufacture of machinery and equipment n.e.c.	10.38%
Electricity, gas, steam and air conditioning supply	5.79%
Architectural and engineering activities; technical testing and analysis	3.39%
Other manufacturing	3.07%
Publishing activities	2.91%
Manufacture of motor vehicles, trailers and semi-trailers	2.86%
Civil engineering	2.66%
Manufacture of computer, electronic and optical products	2.64%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.48%
Other	2.32%
Information service activities	2.28%
Manufacture of coke and refined petroleum products	2.27%
Insurance, reinsurance and pension funding, except compulsory social security	1.87%
Advertising and market research	1.87%
Telecommunications	1.84%
Manufacture of food products	1.77%
Manufacture of rubber and plastic products	1.75%
Water collection, treatment and supply	1.63%
Manufacture of other non-metallic mineral products	1.61%
Manufacture of paper and paper products	1.57%
Scientific research and development	1.55%
Computer programming, consultancy and related activities	1.51%
Food and beverage service activities	1.46%
Legal and accounting activities	1.14%
Manufacture of wearing apparel	0.46%
Retail trade, except of motor vehicles and motorcycles	0.34%
Activities auxiliary to financial services and insurance activities	0.26%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the “do not significantly harm” criteria of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

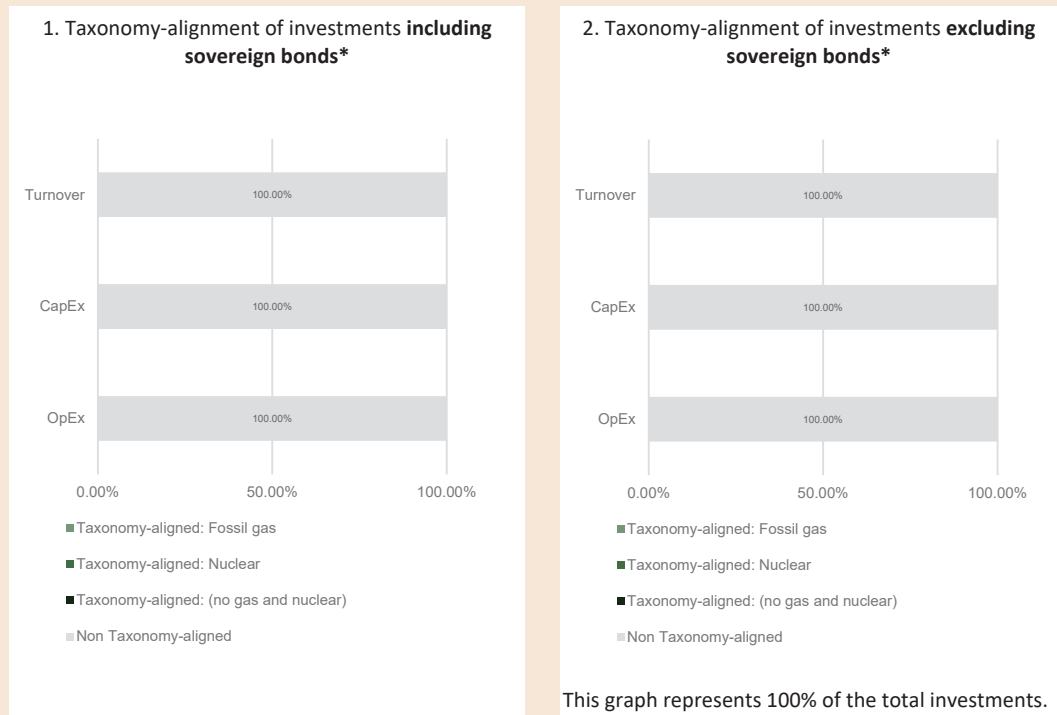

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
 - In fossil gas
 - In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

What was the share of investments made in transitional and enabling activities?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. Therefore, the share of investments made in transitional and enabling activities is 0%.

 **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 51.79% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 45.54 % of sustainable investments with a social objective.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**

Investments included under “not sustainable” represented 2.71% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT FACTORS Entity LEI: 213800KYJJ744RJXUS49
 - CLIMATE EQUITY FUND (the "Financial Product")

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 62.91%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 36.02%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon intensity

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Investment Universe	Coverage
Carbon intensity	90.16 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign		100 %

N.B.: While Sustainability KPIs (including regarding sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. However, given that the volatility of the data is relatively low overall for KPI over the past year, we estimate that comparison of sustainability KPI between the financial product and its benchmark (which does not apply to sustainable investment-related indicators) is relevant and sufficiently accurate.”

● **... And Compared to Previous Periods?**

Sustainability KPI Name	Year	Value	Investment Universe	Coverage
Carbon intensity	2022	145.37 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	119.53 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.55 %

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other AXA IM - RESTRICTED

factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM's exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 268.695 Scope 2: 207.501 Scope 3: 11245.622 Scope 1+2: 476.197 Scope 1+2+3: 11703.525

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	35.29 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	13.79%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	33.97
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

----- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 268.695
Ecosystem protection & Deforestation policy			Scope 2: 207.501 Scope 3: 11245.622 Scope 1+2: 476.197 Scope 1+2+3: 11703.525
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 15.123
Ecosystem protection & Deforestation policy			Scope 1+2+3: 381.936
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1414.725
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	2.18
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 53.56 Energy Production: 31.6
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	4.24
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	33.97
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	5.56%	US
MICROSOFT CORP XNGS USD	Publishing activities	5.45%	US
TESLA INC XNGS USD	Manufacture of motor vehicles, trailers and semi-trailers	3.49%	US
FIRST SOLAR INC XNGS USD	Manufacture of electrical equipment	2.52%	US
EDP RENOVAVEIS SA XLIS EUR	Electricity, gas, steam and air conditioning supply	2.21%	ES
VESTAS WIND SYSTEMS A/S XCSE DKK	Manufacture of machinery and equipment n.e.c.	2.15%	DK
JOHNSON & JOHNSON XNYS USD	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.03%	US
UNITEDHEALTH GROUP INC XNYS USD	Insurance, reinsurance and pension funding, except compulsory social security	1.92%	US
PROCTER & GAMBLE CO/THE XNYS USD	Manufacture of paper and paper products	1.83%	US
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	1.78%	US
SMA SOLAR TECHNOLOGY AG XETR EUR	Manufacture of electrical equipment	1.56%	DE
MASTERCARD INC - A XNYS USD	Activities auxiliary to financial services and insurance activities	1.38%	US
ABBOTT LABORATORIES XNYS USD	Manufacture of computer, electronic and optical products	1.38%	US
ORSTED A/S XCSE DKK	Electricity, gas, steam and air conditioning supply	1.37%	DK

MERCK & CO. INC. XNYS USD	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.18%	US
------------------------------	--	-------	----

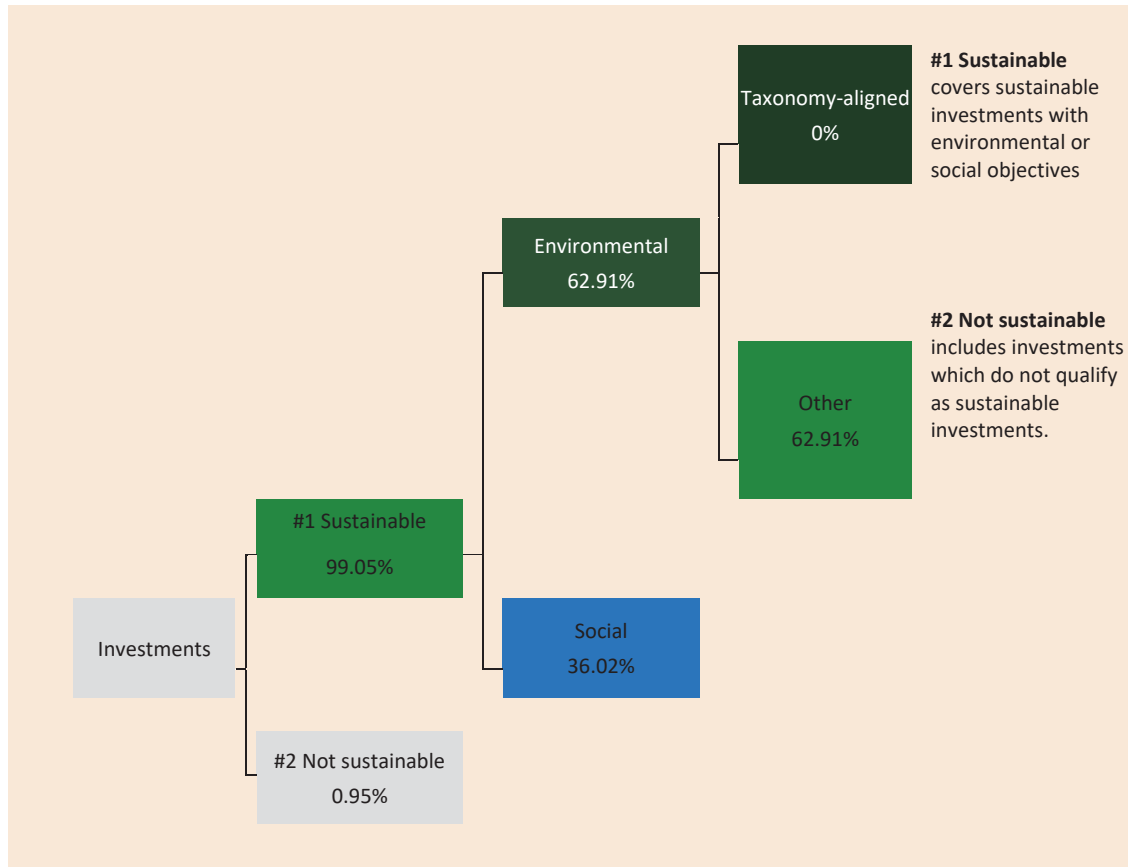

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of computer, electronic and optical products	14.09%
Publishing activities	8.28%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	7.84%
Electricity, gas, steam and air conditioning supply	5.71%

Manufacture of electrical equipment	5.63%
Manufacture of machinery and equipment n.e.c.	5.48%
Activities auxiliary to financial services and insurance activities	5.45%
Manufacture of motor vehicles, trailers and semi-trailers	5.01%
Insurance, reinsurance and pension funding, except compulsory social security	4.39%
Telecommunications	4.16%
Computer programming, consultancy and related activities	3.08%
Manufacture of paper and paper products	3%
Information service activities	2.97%
Real estate activities	2.54%
Wholesale trade, except of motor vehicles and motorcycles	2.17%
Retail trade, except of motor vehicles and motorcycles	2.12%
Land transport and transport via pipelines	1.97%
Manufacture of food products	1.95%
Manufacture of other non-metallic mineral products	1.89%
Manufacture of chemicals and chemical products	1.73%
Financial service activities, except insurance and pension funding	1.51%
Manufacture of beverages	1.37%
Civil engineering	1.1%
Other	0.99%
Manufacture of leather and related products	0.87%
Architectural and engineering activities; technical testing and analysis	0.85%
Scientific research and development	0.68%
Manufacture of wearing apparel	0.46%
Other manufacturing	0.39%
Construction of buildings	0.38%
Manufacture of rubber and plastic products	0.22%
Office administrative, office support and other business support activities	0.22%
Advertising and market research	0.22%
Mining of metal ores	0.21%

Food and beverage service activities	0.21%
Security and investigation activities	0.2%
Warehousing and support activities for transportation	0.2%
Gambling and betting activities	0.17%
Human health activities	0.14%
Waste collection, treatment and disposal activities; materials recovery	0.1%
Employment activities	0.03%
Water collection, treatment and supply	0.01%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the “do not significantly harm” criteria of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

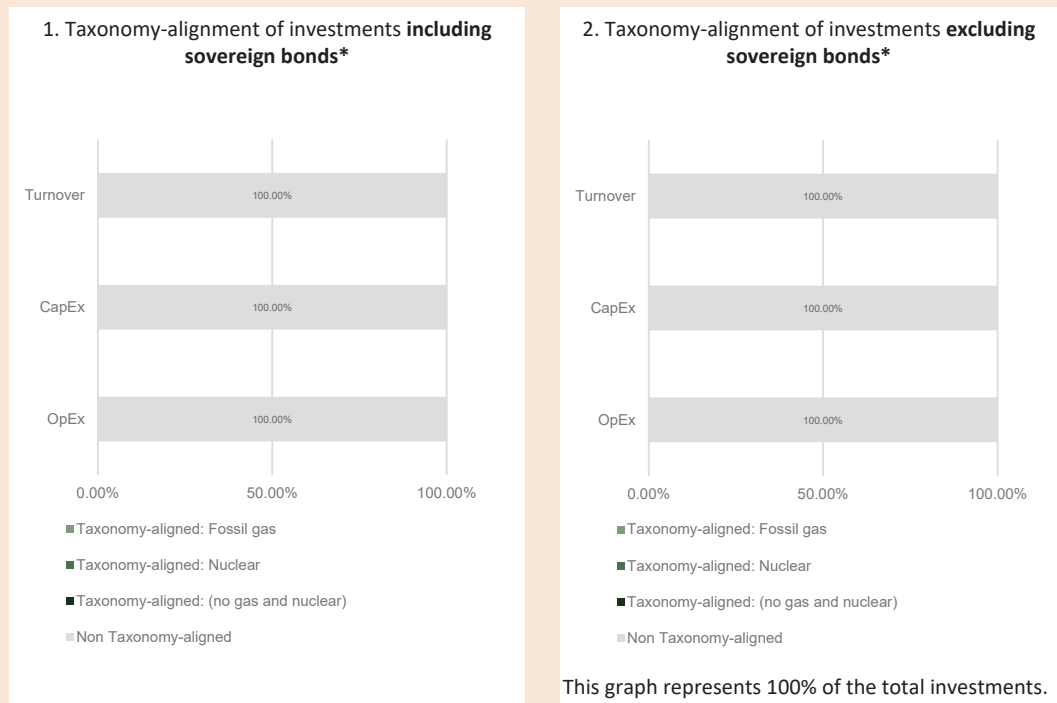

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. Therefore, the share of investments made in transitional and enabling activities is 0%.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 62.91% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 36.02 % of sustainable investments with a social objective.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**

Investments included under “not sustainable” represented 0.95% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT GREEN Entity LEI: 21380049TNZVOFLO2707 BONDS (the "Financial Product")

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 96.89%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 0.69%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- % of Green Bonds

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives. It has considered climate mitigation; climate adaptation objective.

How did the sustainability indicators perform?

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability KPI Name	Value	Coverage
% of Green Bonds	95.18 % of NAV invested in green bonds	97.58 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And Compared to Previous Periods?

Sustainability KPI Name	Year	Value	Coverage
% Green Bonds	2022	96 % of NAV invested in green bonds	100 %

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.64%

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	37.85
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 52774.898
Ecosystem protection & Deforestation policy			Scope 2: 8742.408 Scope 3: 209364.406 Scope 1+2: 61517.305 Scope 1+2+3: 268390.75
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 66.772
Ecosystem protection & Deforestation policy			Scope 1+2+3: 172.937
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1017.884
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	13.62

Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 56.15 Energy Production: 59.31
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	7.96
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	37.85
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
DBR 2.3% - 15/02/2033	Public administration and defence; compulsory social security	4.45%	DE
EIB 3.75% - 14/02/2033	Activities of extraterritorial organisations and bodies	3.56%	LU
DBR 0 - 15/08/2050	Public administration and defence; compulsory social security	2.02%	DE
FRTR 1.75% - 25/06/2039	Public administration and defence; compulsory social security	1.8%	FR
BGB 2.75% - 22/04/2039	Public administration and defence; compulsory social security	1.5%	BE
EIB 1.625% - 09/10/2029	Activities of extraterritorial organisations and bodies	0.96%	LU
KFW 0.875% - 15/09/2026	Financial service activities, except insurance and pension funding	0.95%	DE
FRTR 0.5% - 25/06/2044	Public administration and defence; compulsory social security	0.94%	FR
NGGLN 1.96% - 27/06/2030 Call	Electricity, gas, steam and air conditioning supply	0.89%	US

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

NETHER 0.5% - 15/01/2040	Public administration and defence; compulsory social security	0.85%	NL
EIB 3.3% - 03/02/2028	Activities of extraterritorial organisations and bodies	0.79%	LU
EDPPL 1.7% Var - 20/07/2080 Call	Electricity, gas, steam and air conditioning supply	0.74%	PT
FERROV 0.375% - 25/03/2028	Land transport and transport via pipelines	0.68%	IT
EU 2.75% - 04/02/2033	Activities of extraterritorial organisations and bodies	0.66%	BE
EU 1.25% - 04/02/2043	Activities of extraterritorial organisations and bodies	0.64%	BE

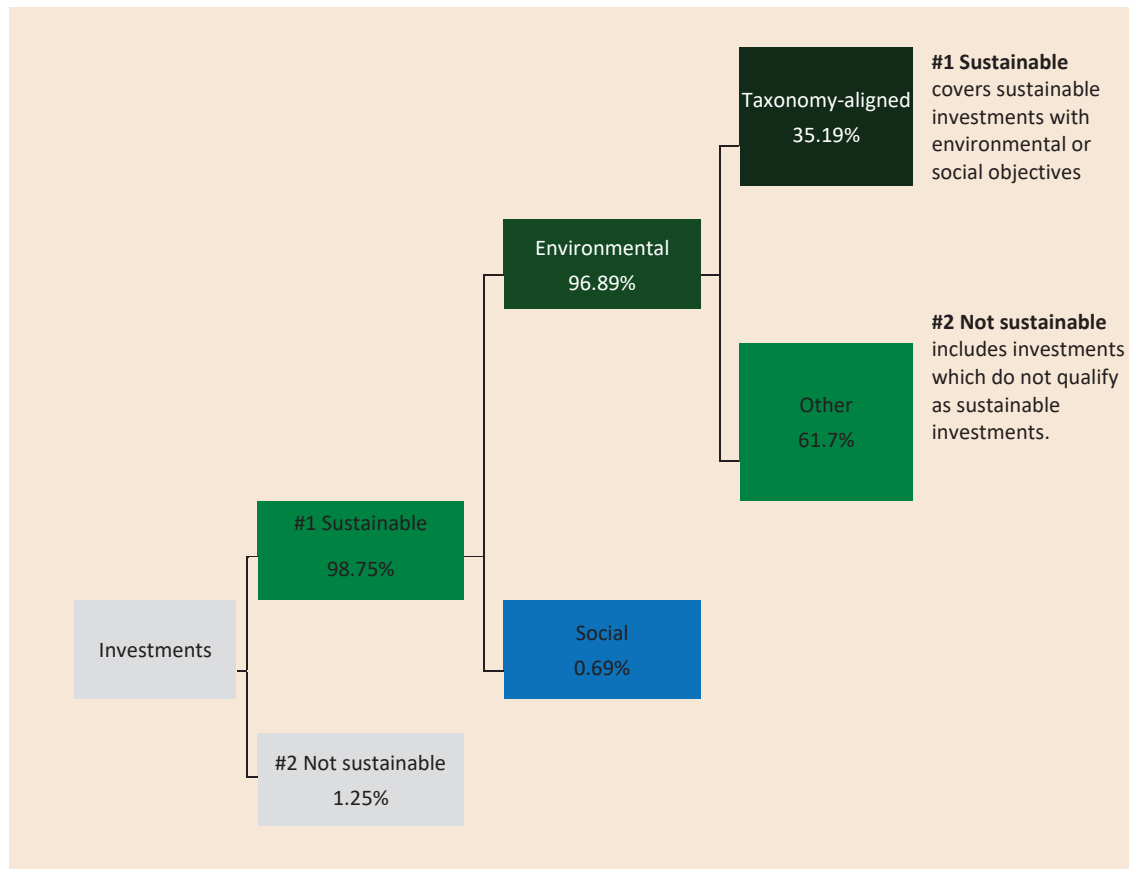

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	23.48%
Financial service activities, except insurance and pension funding	23.17%
Electricity, gas, steam and air conditioning supply	16.73%
Activities of extraterritorial organisations and bodies	9.57%
Real estate activities	6.77%
Telecommunications	3%
Land transport and transport via pipelines	2.91%
Insurance, reinsurance and pension funding, except compulsory social security	2.88%
Manufacture of motor vehicles, trailers and semi-trailers	2.35%
Warehousing and support activities for transportation	1.78%
Other	1.38%
Manufacture of beverages	1.23%
Manufacture of paper and paper products	0.9%
Manufacture of wearing apparel	0.87%
Accommodation	0.51%
Water collection, treatment and supply	0.47%
Manufacture of machinery and equipment n.e.c.	0.45%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.36%
Postal and courier activities	0.33%
Manufacture of computer, electronic and optical products	0.21%
Manufacture of chemicals and chemical products	0.18%
Other manufacturing	0.17%
Construction of buildings	0.14%
Manufacture of food products	0.1%
Waste collection, treatment and disposal activities; materials recovery	0.08%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives and the “do not significantly harm” principles. It invested in activities following the climate mitigation; climate adaptation objectives of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was aligned to EU Taxonomy at 35.19% of its NAV for the period of reference, compared to 38.92% for prior year period.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 61.7% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 0.69 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under "not sustainable" represented 1.25% of the Net Asset Value of the product.

The "not sustainable" assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money

market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

The Financial Product has designated the ICE BofA Green Bond Index as its Benchmark to meet its sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

How did the reference benchmark differ from a broad market index?

The Benchmark is aligned with the sustainable investment objective of the Financial Product, as it tracks the performance of securities issued for qualified “green” purposes which must have a clearly designated use of proceeds solely applied toward projects or activities that promote climate change mitigation or adaptation or other environmental sustainability purposes as outlined by the ICMA Green Bond Principles.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?

Fund's objective is to invest at least 75% of its net asset in Green bonds. Compared to its benchmark, the fund is less exposed to Green bonds but invest, for the remaining part, in Sustainability and/or social bonds.

How did this financial product perform compared with the reference benchmark?

Sustainability KPI Name	Value	Coverage
% of Green Bonds	95.18 % of NAV invested in green bonds	97.58 %

How did this financial product perform compared with the broad market index?

Sustainability KPI Name	Value	Coverage
% of Green Bonds	95.18 % of NAV invested in green bonds	97.58 %

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT HUMAN Entity LEI: 2138002K7PEDAMUO9B79
CAPITAL (the "Financial Product")

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 47.09%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 51.47%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Human Capital Score

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability KPI Name	Value
Human Capital Score	5.68 / 10

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

● **... And Compared to Previous Periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Human Capital Score	2022	5.7 / 10	5.24 / 10	100 %

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM's exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 1618.345 Scope 2: 1078.505 Scope 3: 157745.672 Scope 1+2: 2696.851 Scope 1+2+3: 160003.125

			Sector NACE F: 0.788 Sector NACE G: 0.021 Sector NACE L: 0.575
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	3.38
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.03
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	1.304

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	25.84 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14.03%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	39.58
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 1618.345
Ecosystem protection & Deforestation policy			Scope 2: 1078.505 Scope 3: 157745.672 Scope 1+2: 2696.851 Scope 1+2+3: 160003.125
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 19.653
Ecosystem protection & Deforestation policy			Scope 1+2+3: 1069.116
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 2143.273
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	6.04
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 51.44 Energy Production: 87.18
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	3.38
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	39.58
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
SPIE SA XPAR EUR	Architectural and engineering activities; technical testing and analysis	3.59%	FR
INFRASTRUTTURA WIRELESS ITAL MTAA EUR	Civil engineering	3.02%	IT
ASR NEDERLAND NV XAMS EUR	Insurance, reinsurance and pension funding, except compulsory social security	2.96%	NL
ERSTE GROUP BANK AG XWBO EUR	Financial service activities, except insurance and pension funding	2.78%	AT
EIFFAGE XPAR EUR	Construction of buildings	2.74%	FR
ARCADIS NV XAMS EUR	Architectural and engineering activities; technical testing and analysis	2.61%	NL
PRYSMIAN SPA MTAA EUR	Manufacture of electrical equipment	2.6%	IT
ERG SPA MTAA EUR	Electricity, gas, steam and air conditioning supply	2.45%	IT
STOREBRAND ASA XOSL NOK	Insurance, reinsurance and pension funding, except compulsory social security	2.42%	NO
SIEGFRIED HOLDING AG-REG XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.32%	CH
GALENICA AG XSWX CHF	Wholesale trade, except of motor vehicles and motorcycles	2.19%	CH

CEMBRA MONEY BANK AG XSWX CHF	Financial service activities, except insurance and pension funding	2.14%	CH
AXFOOD AB XSTO SEK	Retail trade, except of motor vehicles and motorcycles	2.11%	SE

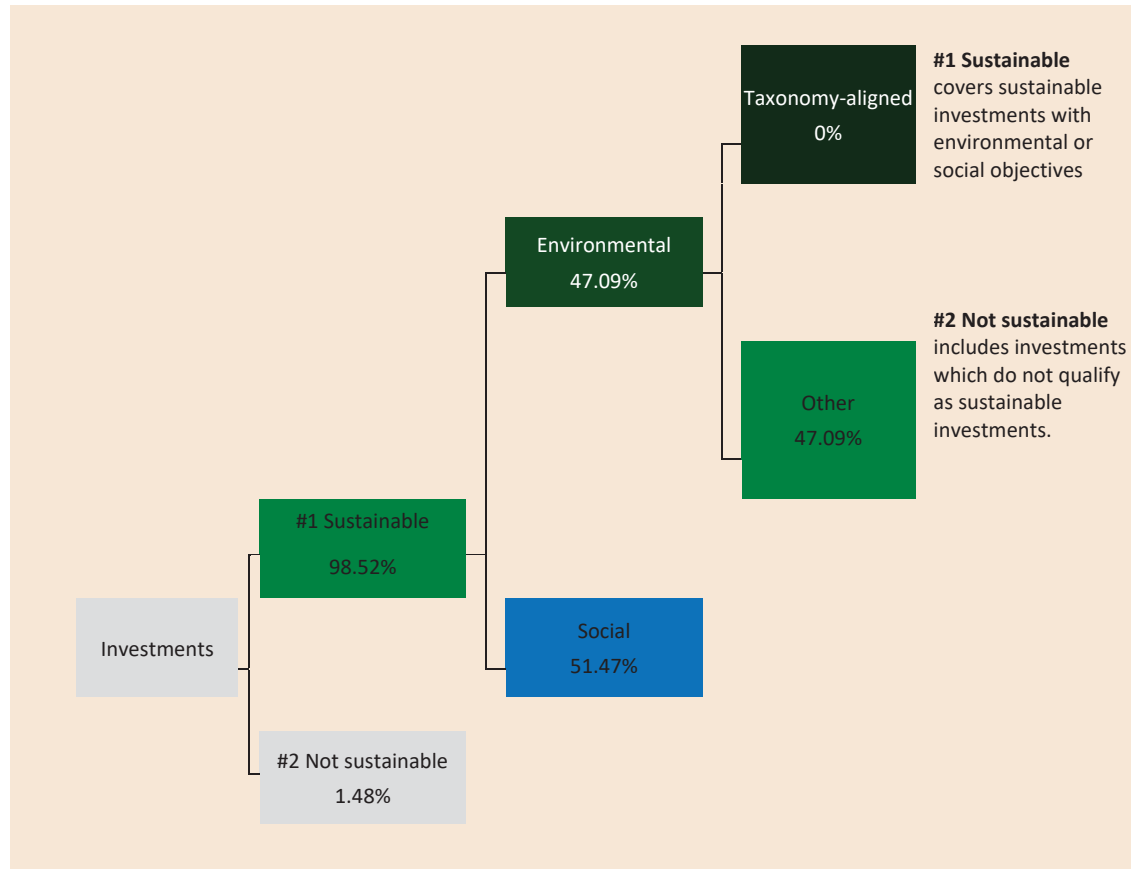

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	10.3%
Manufacture of machinery and equipment n.e.c.	8.71%
Architectural and engineering activities; technical testing and analysis	8.17%
Wholesale trade, except of motor vehicles and motorcycles	7.61%
Publishing activities	5.85%
Insurance, reinsurance and pension funding, except compulsory social security	5.37%
Civil engineering	5.24%
Manufacture of electrical equipment	5.09%

Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.06%
Construction of buildings	4.05%
Real estate activities	4.04%
Manufacture of computer, electronic and optical products	4%
Manufacture of paper and paper products	2.98%
Manufacture of chemicals and chemical products	2.78%
Manufacture of wearing apparel	2.71%
Computer programming, consultancy and related activities	2.69%
Electricity, gas, steam and air conditioning supply	2.45%
Manufacture of food products	2.17%
Telecommunications	2.16%
Retail trade, except of motor vehicles and motorcycles	2.11%
Manufacture of motor vehicles, trailers and semi-trailers	1.96%
Water collection, treatment and supply	1.93%
Manufacture of rubber and plastic products	1.03%
Manufacture of furniture	0.91%
Other	0.89%
Waste collection, treatment and disposal activities; materials recovery	0.72%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the “do not significantly harm” criteria of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. Therefore, the share of investments made in transitional and enabling activities is 0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 47.09% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 51.47 % of sustainable investments with a social objective.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**

Investments included under “not sustainable” represented 1.48% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (iii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT MULTI ASSET OPTIMAL IMPACT (the "Financial Product") Entity LEI: 213800JXTZ2GEXH1UT05

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 62.87%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 31.89%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon intensity
- % of companies in the GSS Watchlist & Non-compliant

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives. It has considered climate mitigation; climate adaptation objective.

How did the sustainability indicators perform?

During the reference period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Investment Universe	Coverage
Carbon intensity	198.1 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	291.63 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.6 %
% of companies in the GSS Watchlist & Non-compliant	3.84 % of invested companies in the GSS Watchlist & Non-compliant	5,76% of invested companies in the GSS Watchlist & Non-compliant	82.65%

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And Compared to Previous Periods?

Sustainability KPI Name	Year	Value	Investment Universe	Coverage
Carbon Delta Technology Opportunity (1.5C)	2022	21.61 % of the invested company's market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable General Equilibrium (AIM/CGE) model	8.91 % of the invested company's market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable General Equilibrium (AIM/CGE) model	93.74 %

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 8633.004 Scope 2: 2849.508 Scope 3: 122620.719 Scope 1+2: 11482.512 Scope 1+2+3: 133424.938
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 50.855 Scope 1+2+3: 467.617
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 2372.783
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	10.17
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 63.63 Energy Production: 61.19
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.293 Sector NACE D: 3.441 Sector NACE E: 3.566 Sector NACE F: 0.225 Sector NACE G: 0.076 Sector NACE H: 0.218 Sector NACE L: 0.386
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	4.23
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.044
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.771

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
--------------------------	---------------	-------	-------------

ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	25.51 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14.08%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	34.82
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 8633.004
Ecosystem protection & Deforestation policy			

			Scope 2: 2849.508 Scope 3: 122620.719 Scope 1+2: 11482.512 Scope 1+2+3: 133424.938
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 50.855 Scope 1+2+3: 467.617
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 2372.783
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	10.17
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 63.63 Energy Production: 61.19
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	4.23
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	34.82
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
EIB 3.75% - 14/02/2033	Activities of extraterritorial organisations and bodies	2.08%	LU
DBR 2.3% - 15/02/2033	Public administration and defence; compulsory social security	2.04%	DE
XYLEM INC XNYS USD	Manufacture of machinery and equipment n.e.c.	1.69%	US
TAIWAN SEMICONDUCTOR MANUFAC XTAI TWD	Manufacture of machinery and equipment n.e.c.	1.45%	TW

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

HDFC BANK LTD-ADR XNYS USD	Financial service activities, except insurance and pension funding	1.44%	IN
Portfolio 80133 EUR SET SSX	Other	1.37%	N/A
CARRIER GLOBAL CORP XNYS USD	Manufacture of machinery and equipment n.e.c.	1.3%	US
DARLING INGREDIENTS INC XNYS USD	Manufacture of food products	1.28%	US
VEOLIA ENVIRONNEMENT XPAR EUR	Water collection, treatment and supply	1.25%	FR
TRIMBLE INC XNGS USD	Manufacture of computer, electronic and optical products	1.25%	US
BANK RAKYAT INDONESIA PERSER XIDX IDR	Financial service activities, except insurance and pension funding	1.22%	ID
THERMO FISHER SCIENTIFIC INC XNYS USD	Manufacture of computer, electronic and optical products	1.2%	US
FRTR 1.75% - 25/06/2039	Public administration and defence; compulsory social security	1.2%	FR
DANAHER CORP XNYS USD	Manufacture of computer, electronic and optical products	1.19%	US
AIR LIQUIDE SA-PF-2024 EUR	Manufacture of chemicals and chemical products	1.16%	FR

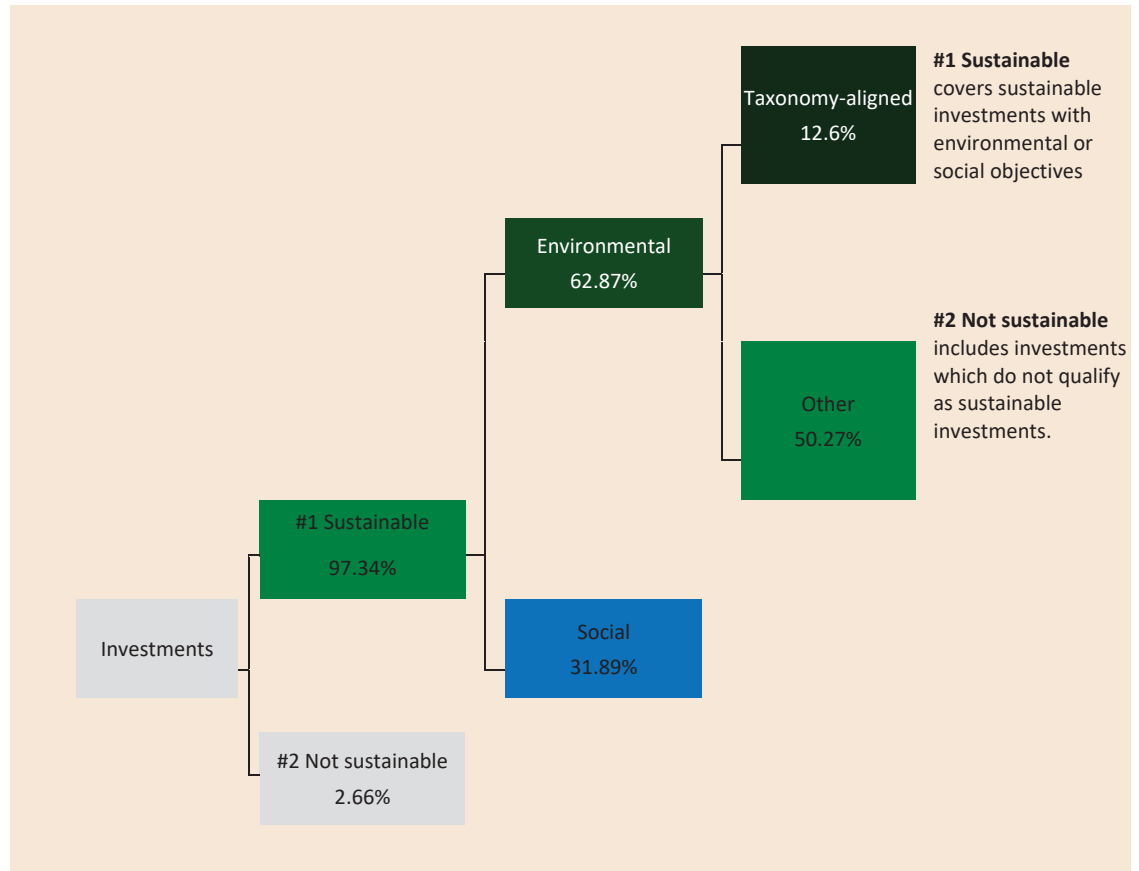

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	14.97%
Public administration and defence; compulsory social security	12.76%
Electricity, gas, steam and air conditioning supply	9.65%
Manufacture of computer, electronic and optical products	8.19%
Manufacture of machinery and equipment n.e.c.	7.01%
Manufacture of chemicals and chemical products	4.71%
Real estate activities	3.95%
Activities of extraterritorial organisations and bodies	3.84%

Manufacture of electrical equipment	3.29%
Other	3.18%
Manufacture of motor vehicles, trailers and semi-trailers	2.8%
Other manufacturing	2.29%
Insurance, reinsurance and pension funding, except compulsory social security	2.13%
Telecommunications	1.83%
Manufacture of food products	1.71%
Scientific research and development	1.59%
Civil engineering	1.58%
Water collection, treatment and supply	1.49%
Retail trade, except of motor vehicles and motorcycles	1.42%
Manufacture of paper and paper products	1.24%
Publishing activities	1.11%
Architectural and engineering activities; technical testing and analysis	1.02%
Land transport and transport via pipelines	0.89%
Activities auxiliary to financial services and insurance activities	0.87%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.86%
Waste collection, treatment and disposal activities; materials recovery	0.86%
Warehousing and support activities for transportation	0.75%
Manufacture of fabricated metal products, except machinery and equipment	0.62%
Office administrative, office support and other business support activities	0.52%
Rental and leasing activities	0.47%
Human health activities	0.44%
Manufacture of wearing apparel	0.41%
Manufacture of beverages	0.35%
Education	0.3%
Accommodation	0.25%
Information service activities	0.21%
Manufacture of other non-metallic mineral products	0.19%
Construction of buildings	0.11%

Postal and courier activities	0.06%
Computer programming, consultancy and related activities	0.05%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives and the “do not significantly harm” principles. It invested in activities following the climate mitigation; climate adaptation objectives of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

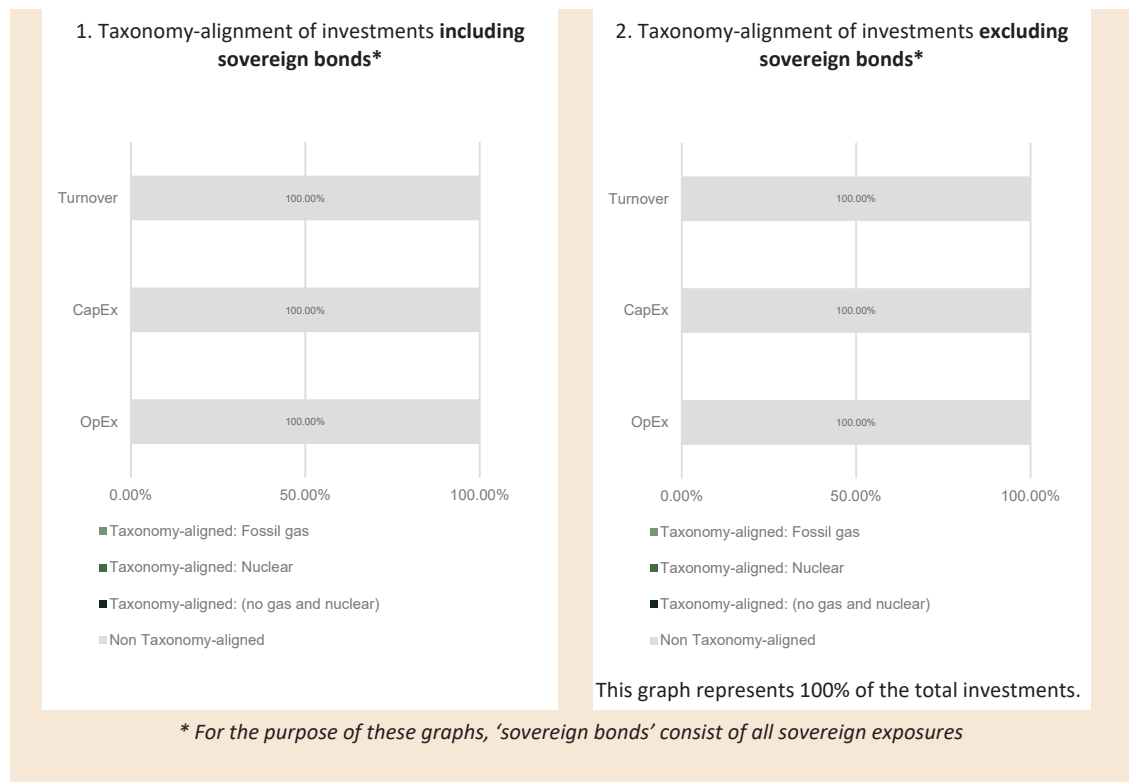

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

 are sustainable investments

with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was aligned to EU Taxonomy at 12.6% of its NAV for the period of reference, compared to 10.24% for prior year period.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 50.27% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 31.89 % of sustainable investments with a social objective.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**

Investments included under “not sustainable” represented 2.66% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT PLASTIC Entity LEI: 213800DXMJQVLXSSV879 & WASTE TRANSITION EQUITY QI (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective: ___%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: ___%**

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 91.56% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Responsible Consumption and Production

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Investment universe	Coverage
Responsible Consumption and Production	2.75 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))		

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Investment universe	Coverage
Responsible Consumption and Production	2022	2.59 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	0.01 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the

- OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 2209.649 Scope 2: 766.789 Scope 3: 11775.247 Scope 1+2: 2976.438 Scope 1+2+3: 14546.954
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 156.638 Scope 1+2+3: 777.899
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 1657.625
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	7.65
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 72.42 Energy Production: 75.72
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.857 Sector NACE D: 3.132 Sector NACE E: 0.803 Sector NACE F: 0.048 Sector NACE G: 0.08 Sector NACE H: 0.04
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	2.86
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.04
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	2.338

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	41.33 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	10.63%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	37.29
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 2209.649
Ecosystem protection & Deforestation policy			Scope 2: 766.789 Scope 3: 11775.247 Scope 1+2: 2976.438 Scope 1+2+3: 14546.954
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 156.638
Ecosystem protection & Deforestation policy			Scope 1+2+3: 777.899
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1657.625
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	7.65
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 72.42 Energy Production: 75.72
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	2.86
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	37.29
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	2.99%	US
REPUBLIC SERVICES INC XNYS USD	Waste collection, treatment and disposal activities; materials recovery	2.91%	US
CASCADES INC XTSE CAD	Manufacture of paper and paper products	2.37%	CA
BALL CORP XNYS USD	Manufacture of fabricated metal products, except machinery and equipment	2.35%	US
COMMERCIAL METALS CO XNYS USD	Manufacture of basic metals	2.31%	US
BEST BUY CO INC XNYS USD	Retail trade, except of motor vehicles and motorcycles	2.27%	US
SONOCO PRODUCTS CO XNYS USD	Manufacture of paper and paper products	2.24%	US
PROCTER & GAMBLE CO/THE XNYS USD	Manufacture of paper and paper products	2.22%	US
DARLING INGREDIENTS INC XNYS USD	Manufacture of food products	2.18%	US
RENEWI PLC XLON GBP	Waste collection, treatment and disposal activities; materials recovery	2.13%	GB
DEERE & CO XNYS USD	Manufacture of machinery and equipment n.e.c.	2.03%	US
DS SMITH PLC XLON GBP	Manufacture of paper and paper products	1.99%	GB
SMURFIT KAPPA GROUP PLC XDUB EUR	Manufacture of paper and paper products	1.92%	IE
SECHE ENVIRONNEMENT XPAR EUR	Waste collection, treatment and disposal activities; materials recovery	1.92%	FR
WASTE CONNECTIONS INC XNYS USD	Waste collection, treatment and disposal activities; materials recovery	1.91%	CA

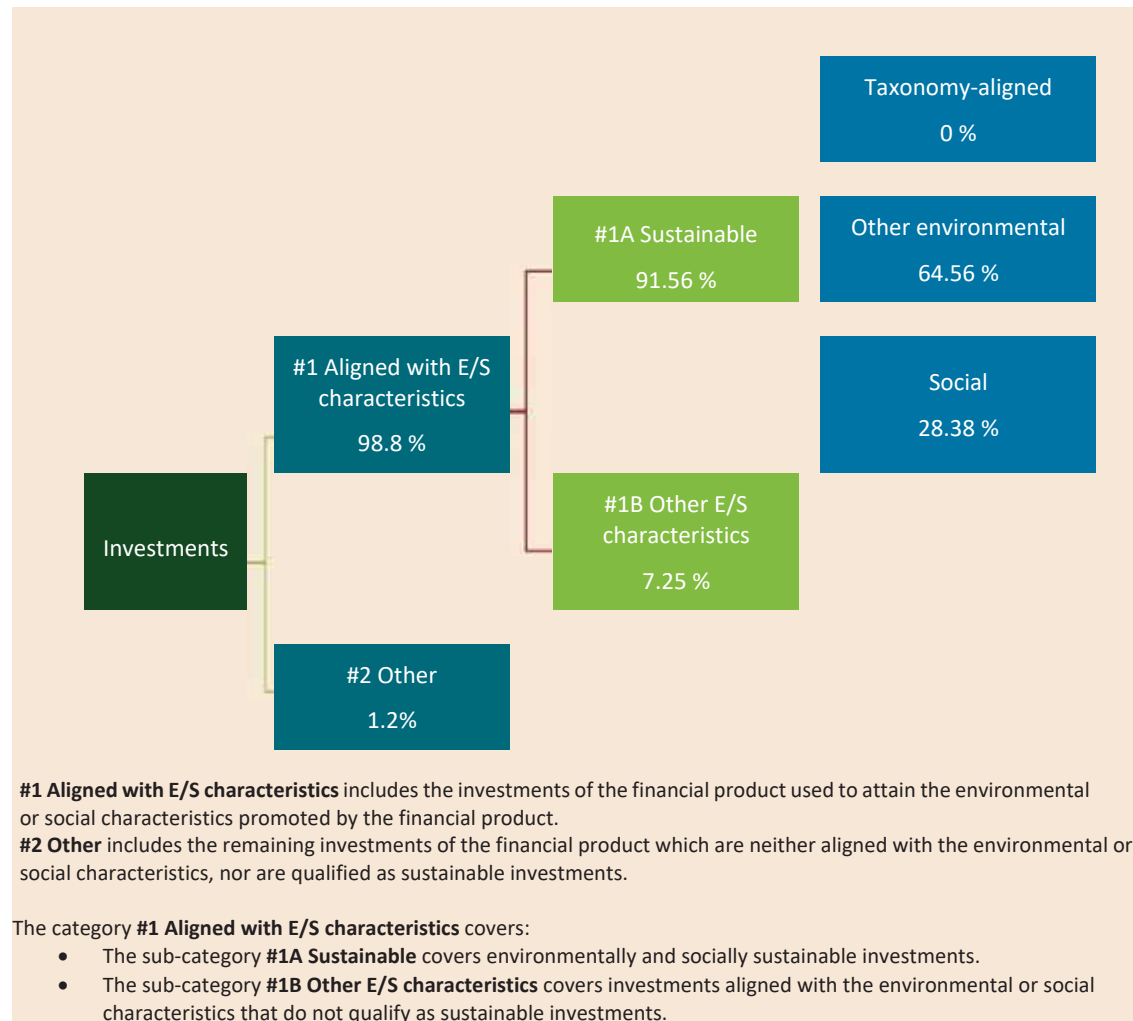

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of paper and paper products	17.04%
Waste collection, treatment and disposal activities; materials recovery	16.58%
Manufacture of computer, electronic and optical products	9.07%
Manufacture of food products	6.55%
Manufacture of basic metals	5.66%
Retail trade, except of motor vehicles and motorcycles	5.13%
Manufacture of machinery and equipment n.e.c.	4.99%
Publishing activities	4.32%
Manufacture of rubber and plastic products	3.53%
Electricity, gas, steam and air conditioning supply	3.31%
Manufacture of chemicals and chemical products	3.25%
Manufacture of fabricated metal products, except machinery and equipment	2.57%
Other manufacturing	2.06%
Wholesale trade, except of motor vehicles and motorcycles	1.85%
Rental and leasing activities	1.62%
Manufacture of other non-metallic mineral products	1.59%
Manufacture of furniture	1.54%
Manufacture of wearing apparel	1.25%
Other	1.19%
Office administrative, office support and other business support activities	1.13%
Manufacture of motor vehicles, trailers and semi-trailers	0.79%
Food and beverage service activities	0.74%
Civil engineering	0.71%
Manufacture of leather and related products	0.67%
Water collection, treatment and supply	0.67%
Manufacture of coke and refined petroleum products	0.64%
Manufacture of textiles	0.53%
Manufacture of electrical equipment	0.44%
Construction of buildings	0.17%
Telecommunications	0.17%

Architectural and engineering activities; technical testing and analysis	0.09%
Scientific research and development	0.05%
Gambling and betting activities	0.05%
Accommodation	0.03%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

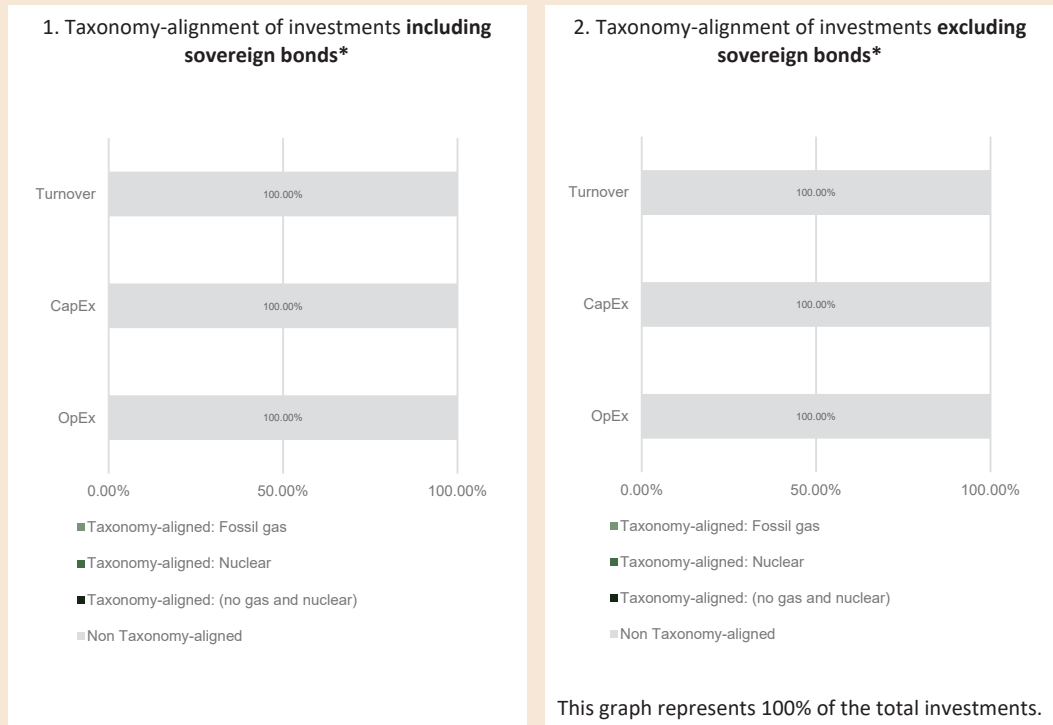

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 64.56% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 28.38% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 1.2% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT SOCIAL BONDS (the "Financial Product") Entity LEI: 213800CLRMMQHNGESG95

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 9.04%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 86.15%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Women on board
- Carbon Intensity

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainability indicators perform?

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Investment Universe	Coverage
Women on board	38.87 % of women on board	35.39 % of women on board	96.78 %
Carbon Intensity	56.03 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	167.8 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.94 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And Compared to Previous Periods?

Sustainability KPI Name	Year	Value	Investment Universe	Coverage
Women on board	2022	37.82 % of women on board	34.31 % of women on board	93.06 %
Carbon Intensity	2022	97.55 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	208.26 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	94.3 %

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 245.527 Scope 2: 74.552

			Scope 3: 1787.959 Scope 1+2: 320.079 Scope 1+2+3: 2062.158
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 18.49 Scope 1+2+3: 33.397
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1136.478
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	2.67

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.07 Sector NACE D: 3.363 Sector NACE E: 0.172 Sector NACE F: 0.236 Sector NACE L: 0.349
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	3.42
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.006
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.019

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	6.06 %

compliance with those standards) ²			
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.03%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	39.28
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 245.527
Ecosystem protection & Deforestation policy			Scope 2: 74.552 Scope 3: 1787.959 Scope 1+2: 320.079 Scope 1+2+3: 2062.158
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 18.49
Ecosystem protection & Deforestation policy			Scope 1+2+3: 33.397
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1136.478
Ecosystem protection & Deforestation policy			

Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	2.67
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 58.83 Energy Production: 44.7
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	3.42
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	39.28
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
UNEDIC 0.01% - 25/05/2031	Insurance, reinsurance and pension funding, except compulsory social security	4.28%	FR
EU 0 - 04/10/2030	Activities of extraterritorial organisations and bodies	4.24%	BE
EU 0.3% - 04/11/2050	Activities of extraterritorial organisations and bodies	3.3%	BE
CADES 1.375% - 20/01/2031	Public administration and defence; compulsory social security	2.73%	FR
EU 0 - 04/07/2035	Activities of extraterritorial organisations and bodies	1.92%	BE
EU 0.1% - 04/10/2040	Activities of extraterritorial organisations and bodies	1.48%	BE
CADES 2.75% - 25/11/2032	Public administration and defence; compulsory social security	1.36%	FR
EU 2.75% - 04/12/2037	Activities of extraterritorial organisations and bodies	1.28%	BE
Portfolio 95997 EUR SET SXX	Other	1.25%	N/A

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

CADES 3.125% - 01/03/2030	Public administration and defence; compulsory social security	1.2%	FR
CHILE 0.555% - 21/01/2029 Call	Public administration and defence; compulsory social security	1.13%	CL
NWG 0.75% Var - 15/11/2025 Call	Financial service activities, except insurance and pension funding	1.13%	GB
MS 0.864% Var - 21/10/2025 Call	Activities auxiliary to financial services and insurance activities	1.09%	US
CADES 3.75% - 24/05/2028	Public administration and defence; compulsory social security	1.08%	FR
EU 0 - 04/07/2029	Activities of extraterritorial organisations and bodies	1.07%	BE

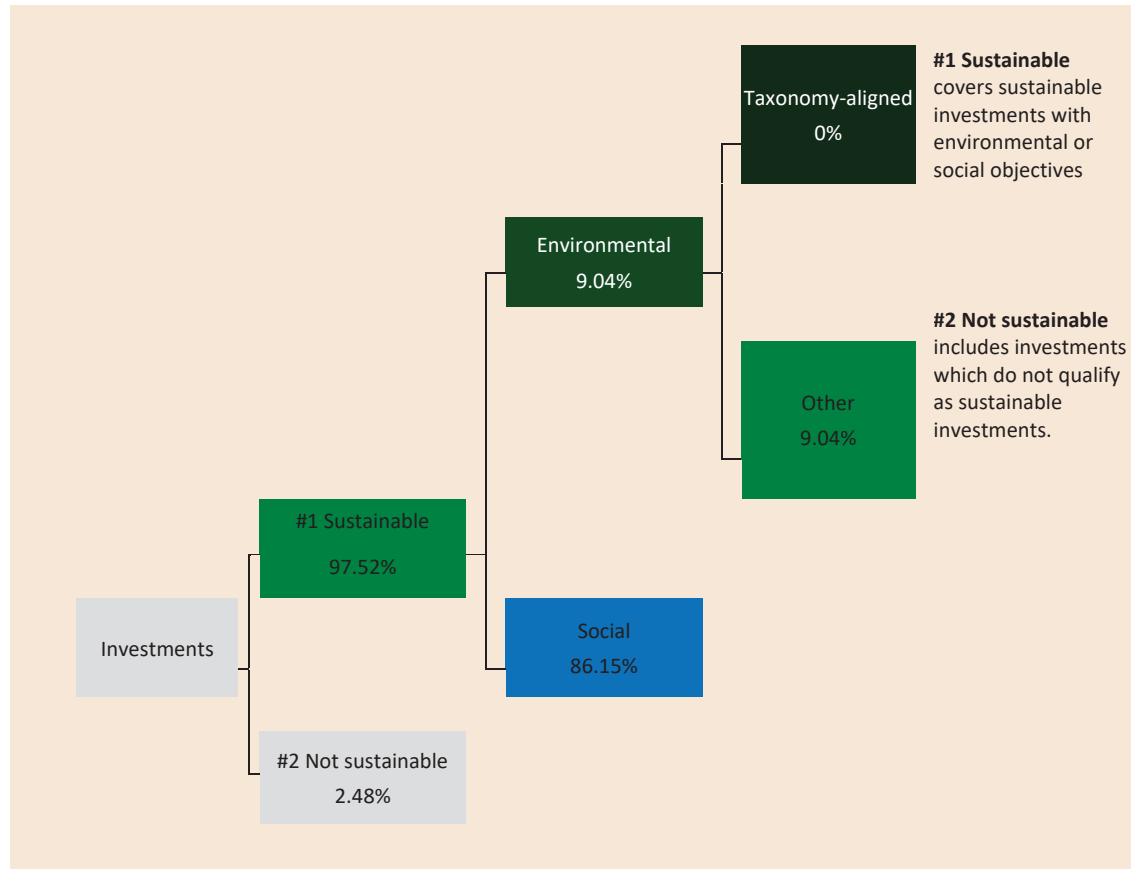

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	26.81%
Public administration and defence; compulsory social security	23.52%
Activities of extraterritorial organisations and bodies	19.51%
Insurance, reinsurance and pension funding, except compulsory social security	10.78%
Real estate activities	2.88%
Other	2.68%
Electricity, gas, steam and air conditioning supply	2.66%
Rental and leasing activities	2.23%

Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.14%
Other manufacturing	1.28%
Activities auxiliary to financial services and insurance activities	1.09%
Telecommunications	0.95%
Postal and courier activities	0.82%
Publishing activities	0.77%
Manufacture of chemicals and chemical products	0.73%
Manufacture of food products	0.57%
Scientific research and development	0.56%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the “do not significantly harm” criteria of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. Therefore, the share of investments made in transitional and enabling activities is 0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 9.04% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 86.15 % of sustainable investments with a social objective.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**

Investments included under “not sustainable” represented 2.48% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (iii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

The Financial Product has designated the ICE Social Bond index as a reference benchmark to meet its sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

● **How did the reference benchmark differ from a broad market index?**

The Benchmark is aligned with the sustainable investment objective of the Financial Product, as it tracks the performance of securities issued for qualified “social” purposes which must have a clearly designated use of proceeds solely applied toward projects or activities that promote social sustainability purposes as outlined by the ICMA Green and Social Bond Principles (“GSBP”).

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

Compared to its benchmark, the fund outperformed the Women on Board sustainability indicator, whereas the benchmark outperformed the Financial Product on the carbon intensity indicator.

● **How did this financial product perform compared with the reference benchmark?**

Sustainability KPI Name	Value	Investment Universe	Coverage
Women on board	38.87 % of women on board	35.39 % of women on board	96.78 %
Carbon Intensity	56.03 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	167.8 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.94 %

● **How did this financial product perform compared with the broad market index?**

Sustainability KPI Name	Value	Investment Universe	Coverage
Women on board	38.87 % of women on board	35.39 % of women on board	96.78 %
Carbon Intensity	56.03 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	167.8 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.94 %

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT SOCIAL Entity LEI: 213800Z5DWFODAPKIC63
 PROGRESS (the "Financial Product")

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 21.49%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 75.7%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Social Product & Services score

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Social Product & Services score	3.49 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))		

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

● **... And Compared to Previous Periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Social Product & Services score	2022	3.51 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	0.96 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	89.76 %

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.

- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 381.328 Scope 2: 683.994 Scope 3: 13283.893 Scope 1+2: 1065.321 Scope 1+2+3: 14300.947
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 8.605 Scope 1+2+3: 91.059
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 630.421

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	61.64 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	13.24%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	33.32
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO)

Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 381.328
Ecosystem protection & Deforestation policy			Scope 2: 683.994 Scope 3: 13283.893 Scope 1+2: 1065.321 Scope 1+2+3: 14300.947
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 8.605
Ecosystem protection & Deforestation policy			Scope 1+2+3: 91.059
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 630.421
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	N/A
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 68.79
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	1.67
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	33.32
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
Portfolio USD SET SSX	Other	3.16%	N/A
STRYKER CORP XNYS USD	Other manufacturing	2.94%	US
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.85%	GB
NOVO NORDISK A/S-B XCSE DKK	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.8%	DK
INTUIT INC XNGS USD	Publishing activities	2.76%	US
HDFC BANK LIMITED XNSE INR	Financial service activities, except insurance and pension funding	2.68%	IN
MSA SAFETY INC XNYS USD	Manufacture of fabricated metal products, except machinery and equipment	2.58%	US
INTUITIVE SURGICAL INC XNGS USD	Other manufacturing	2.52%	US
CSL LTD XASX AUD	Scientific research and development	2.46%	AU
DEXCOM INC XNGS USD	Other manufacturing	2.43%	US
GENTEX CORP XNGS USD	Manufacture of motor vehicles, trailers and semi-trailers	2.41%	US
TERADYNE INC XNGS USD	Manufacture of machinery and equipment n.e.c.	2.41%	US
RENTOKIL INITIAL PLC XLON GBP	Services to buildings and landscape activities	2.31%	GB
UNICHARM CORP XTKS JPY	Manufacture of paper and paper products	2.28%	JP
INFRASTRUTTURA WIRELESS ITAL MTAA EUR	Civil engineering	2.27%	IT

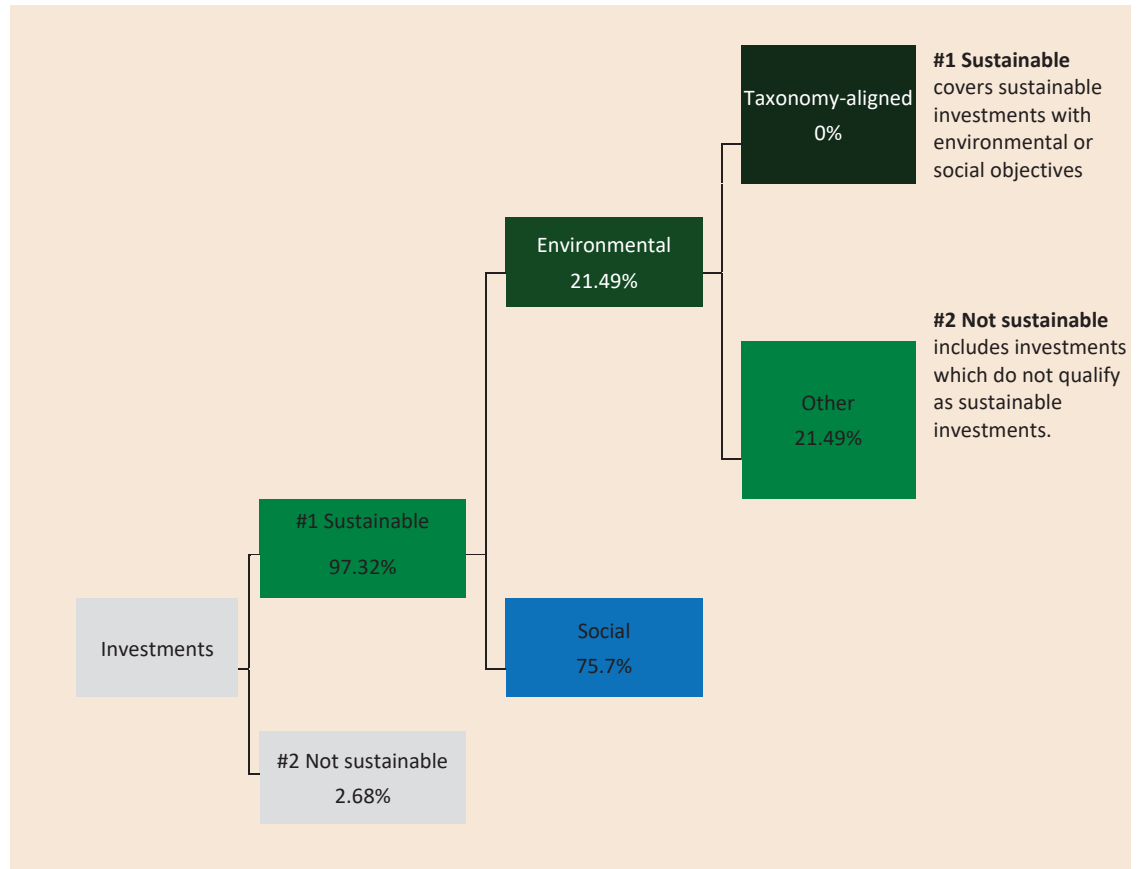

The portfolio proportions of investments presented above are an average over the reference period.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Publishing activities	9.79%
Other manufacturing	7.89%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	7.27%
Financial service activities, except insurance and pension funding	6.16%
Scientific research and development	5.51%
Insurance, reinsurance and pension funding, except compulsory social security	4.77%
Manufacture of machinery and equipment n.e.c.	4.63%
Manufacture of computer, electronic and optical products	4.47%

Manufacture of motor vehicles, trailers and semi-trailers	4.2%
Retail trade, except of motor vehicles and motorcycles	3.96%
Education	3.79%
Manufacture of chemicals and chemical products	3.69%
Civil engineering	3.62%
Architectural and engineering activities; technical testing and analysis	3.54%
Other	3.21%
Activities auxiliary to financial services and insurance activities	2.88%
Manufacture of fabricated metal products, except machinery and equipment	2.58%
Real estate activities	2.53%
Services to buildings and landscape activities	2.31%
Manufacture of paper and paper products	2.28%
Manufacture of food products	1.86%
Sports activities and amusement and recreation activities	1.86%
Information service activities	1.82%
Security and investigation activities	1.64%
Human health activities	1.37%
Construction of buildings	1.33%
Manufacture of electrical equipment	1.04%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the “do not significantly harm” criteria of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. Therefore, the share of investments made in transitional and enabling activities is 0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 21.49% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 75.7 % of sustainable investments with a social objective.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**

Investments included under “not sustainable” represented 2.68% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (iii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT US **Entity LEI:** 2138005LF4AQSQMIW253
CORPORATE BONDS LOW CARBON (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 60.16% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product uses an 'extra-financial indicator improvement' approach, and outperformed Carbon intensity by at least 20% compared to its Benchmark Bloomberg US Corporate Investment Grade during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	120.75 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	254 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	97.04 %
Water Intensity	530.02 Thousands of cubic meters for corporates	18780.03 Thousands of cubic meters for corporates	97.04 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	109.44 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	312.16 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	96.82 %
Water intensity	2022	1147.05 Thousands of cubic meters for corporates	34779.96 Thousands of cubic meters for corporates	96.82 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts ("PAIs") indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact ' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 271.03 Scope 2: 125.371 Scope 3: 2776.756 Scope 1+2: 396.402 Scope 1+2+3: 3161.561

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	52.22 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.97%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	33.66
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 271.03

-----------------------------------	--	-------	----

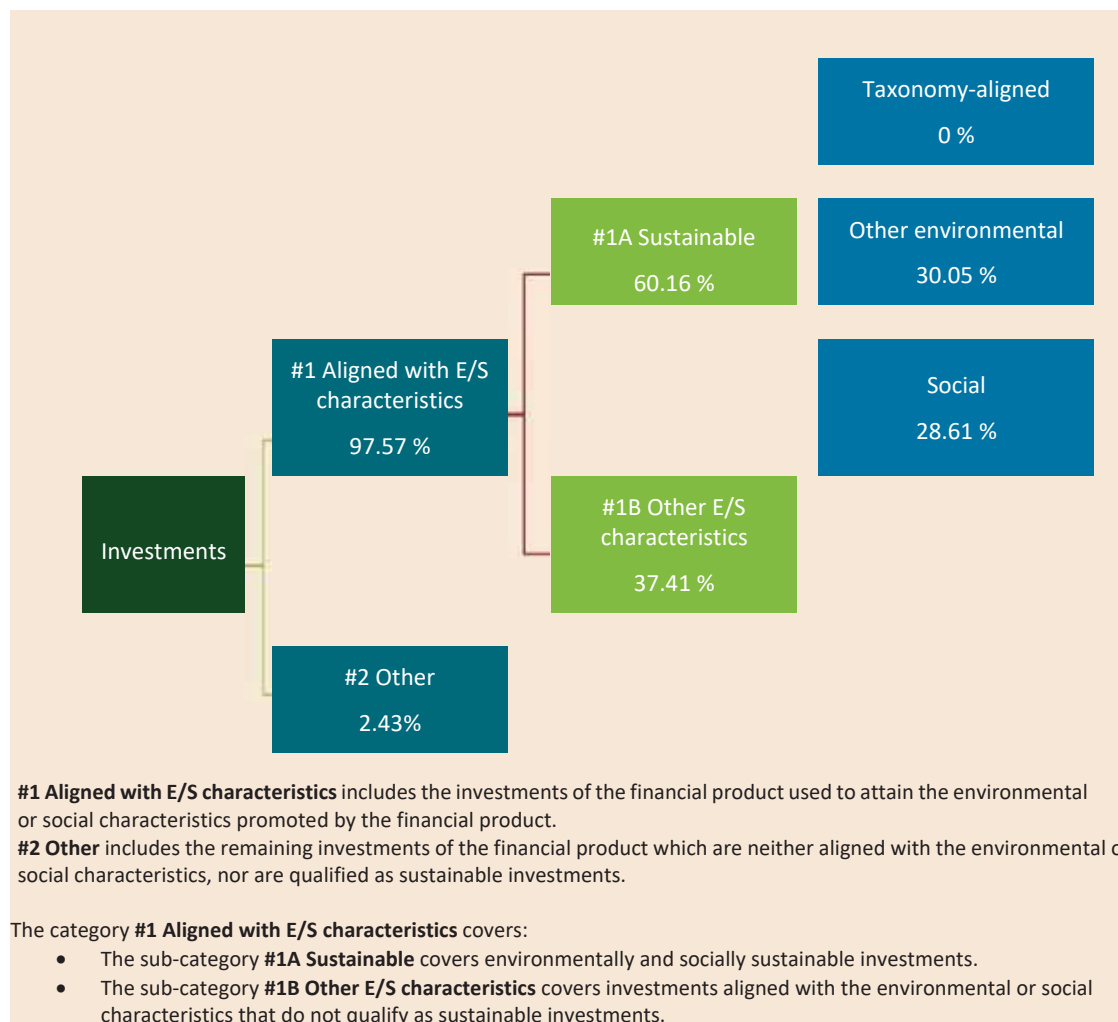

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	23.71%
Activities auxiliary to financial services and insurance activities	7.5%
Telecommunications	7.17%
Manufacture of computer, electronic and optical products	6.53%
Insurance, reinsurance and pension funding, except compulsory social security	4.48%
Land transport and transport via pipelines	4.38%
Real estate activities	3.23%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.18%
Manufacture of food products	3.08%
Retail trade, except of motor vehicles and motorcycles	2.95%
Manufacture of beverages	2.79%
Other	2.47%
Publishing activities	2.38%
Manufacture of machinery and equipment n.e.c.	2.37%
Wholesale trade, except of motor vehicles and motorcycles	2.37%
Rental and leasing activities	2.36%
Manufacture of paper and paper products	2.18%
Manufacture of motor vehicles, trailers and semi-trailers	2.11%
Other manufacturing	1.97%
Information service activities	1.52%
Waste collection, treatment and disposal activities; materials recovery	1.42%
Manufacture of chemicals and chemical products	1.3%
Public administration and defence; compulsory social security	1.1%
Scientific research and development	1.05%
Warehousing and support activities for transportation	1.04%
Office administrative, office support and other business support activities	0.96%
Motion picture, video and television programme production, sound recording and music publishing activities	0.91%

Manufacture of rubber and plastic products	0.86%
Human health activities	0.68%
Legal and accounting activities	0.57%
Food and beverage service activities	0.5%
Manufacture of other transport equipment	0.44%
Accommodation	0.32%
Manufacture of electrical equipment	0.09%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 30.05% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 28.61% of sustainable investments with a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining "Other" investments represented 2.43% of the Financial Product's Net Asset Value.

The "other" assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ACT US HIGH YIELD BONDS LOW CARBON (the "Financial Product") **Entity LEI:** 213800UGAWNFXHQA9Z96

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<p style="margin: 0;"><input checked="" type="radio"/> <input type="checkbox"/> YES</p> <p style="margin: 10px 0 0 20px;"><input type="checkbox"/> It made sustainable investments with an environmental objective: ___%</p> <p style="margin: 10px 0 0 20px;"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin: 10px 0 0 20px;"><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin: 10px 0 0 20px;"><input type="checkbox"/> It made sustainable investments with a social objective: ___%</p>	<p style="margin: 0;"><input type="radio"/> <input checked="" type="checkbox"/> NO</p> <p style="margin: 10px 0 0 20px;"><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 33.87% of sustainable investments</p> <p style="margin: 10px 0 0 20px;"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin: 10px 0 0 20px;"><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin: 10px 0 0 20px;"><input checked="" type="checkbox"/> with a social objective</p> <p style="margin: 10px 0 0 20px;"><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product uses an 'extra-financial indicator improvement' approach, and outperformed Carbon intensity by at least 20% compared to its Benchmark ICE BofA US High Yield during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	154.86 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	312.54 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.13 %
Water Intensity	1638.1 Thousands of cubic meters for corporates	18654.74 Thousands of cubic meters for corporates	92.13 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	150.07 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	379.17 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	94.47 %
Water intensity	2022	1868.34 Thousands of cubic meters for corporates	24853.92 Thousands of cubic meters for corporates	94.47 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 7327.347 Scope 2: 2846.908 Scope 3: 65960.453 Scope 1+2: 10174.256 Scope 1+2+3: 71359.469
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 50.141 Scope 1+2+3: 388.938
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 985.037

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE B: 1.344 Sector NACE C: 0.467 Sector NACE G: 0.083 Sector NACE H: 2.65 Sector NACE L: 0.259
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	N/A
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.002
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.091

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	61.66 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.6%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	27.07
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 7327.347
Ecosystem protection & Deforestation policy			Scope 2: 2846.908
			Scope 3: 65960.453

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
Portfolio 93819 USD SET SXZ	Other	3.17%	N/A
OUT 5% - 15/08/2027 Call	Advertising and market research	1.31%	US
ENR 4.75% - 15/06/2028 Call	Manufacture of electrical equipment	1.24%	US
HQY 4.5% - 01/10/2029 Call	Human health activities	1.18%	US
ZMINFO 3.875% - 01/02/2029 Call	Publishing activities	1.15%	US
SSNC 5.5% - 30/09/2027 Call	Publishing activities	1.14%	US
MATW 5.25% - 01/12/2025 Call	Other personal service activities	1.13%	US
CLVTSC 4.875% - 01/07/2029 Call	Publishing activities	1.12%	US
ZIGGO 6% - 15/01/2027 Call	Telecommunications	1.05%	NL
MTX 5% - 01/07/2028 Call	Manufacture of chemicals and chemical products	1%	US
SAIC 4.875% - 01/04/2028 Call	Computer programming, consultancy and related activities	0.99%	US
NXST 5.625% - 15/07/2027 Call	Programming and broadcasting activities	0.99%	US
GEL 7.75% - 01/02/2028 Call	Land transport and transport via pipelines	0.99%	US

COOP 5.75% - 15/11/2031 Call	Financial service activities, except insurance and pension funding	0.99%	US
ARGID 4.125% - 15/08/2026 Call	Manufacture of paper and paper products	0.96%	IE

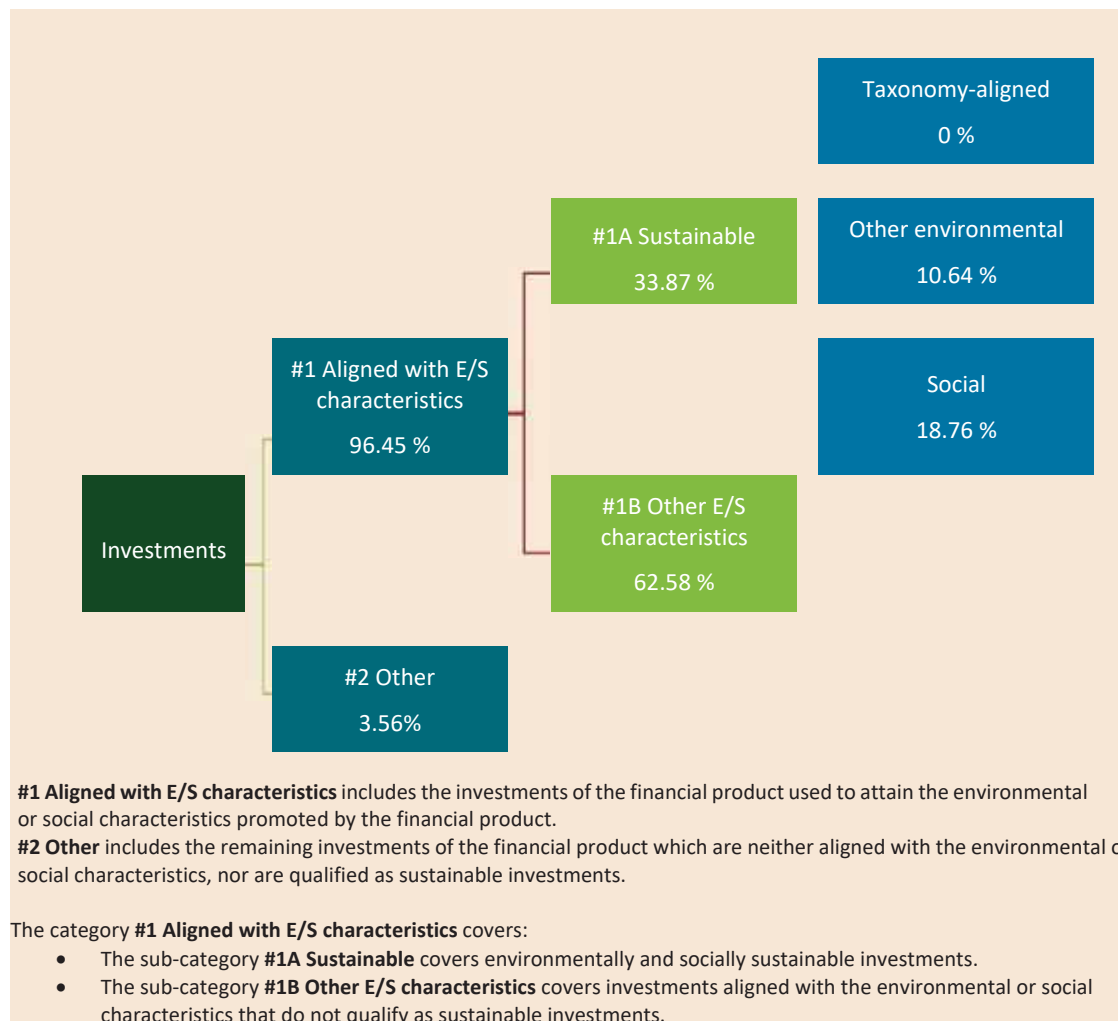

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Publishing activities	9.79%
Telecommunications	8.48%
Human health activities	5.81%
Manufacture of chemicals and chemical products	5.8%
Real estate activities	4.12%
Financial service activities, except insurance and pension funding	3.84%
Manufacture of computer, electronic and optical products	3.7%
Security and investigation activities	3.66%
Manufacture of electrical equipment	3.6%
Other	3.17%
Manufacture of food products	3.11%
Manufacture of paper and paper products	3.02%
Food and beverage service activities	2.93%
Land transport and transport via pipelines	2.92%
Programming and broadcasting activities	2.55%
Wholesale trade, except of motor vehicles and motorcycles	2.37%
Computer programming, consultancy and related activities	2.36%
Manufacture of fabricated metal products, except machinery and equipment	2.28%
Gambling and betting activities	1.7%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.7%
Other manufacturing	1.66%
Manufacture of motor vehicles, trailers and semi-trailers	1.52%
Motion picture, video and television programme production, sound recording and music publishing activities	1.39%
Manufacture of wearing apparel	1.35%
Advertising and market research	1.31%
Accommodation	1.25%
Water transport	1.23%
Office administrative, office support and other business support activities	1.16%

Other personal service activities	1.13%
Manufacture of other non-metallic mineral products	1.12%
Information service activities	1.08%
Rental and leasing activities	0.97%
Creative, arts and entertainment activities	0.93%
Civil engineering	0.92%
Manufacture of rubber and plastic products	0.92%
Manufacture of machinery and equipment n.e.c.	0.92%
Scientific research and development	0.66%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.64%
Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	0.64%
Manufacture of other transport equipment	0.53%
Retail trade, except of motor vehicles and motorcycles	0.51%
Activities auxiliary to financial services and insurance activities	0.39%
Sports activities and amusement and recreation activities	0.33%
Manufacture of leather and related products	0.28%
Warehousing and support activities for transportation	0.12%
Mining support service activities	0.1%
Printing and reproduction of recorded media	0.06%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 10.64% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 18.76% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 3.55% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ASIAN HIGH YIELD BONDS (the "Financial Product") Entity LEI: 213800QG92RMG2XMKI69

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 42.08% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	5.51 / 10	4.88 / 10	92.25 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	5.26 / 10	4.63 / 10	87.52 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact ' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 6492.198 Scope 2: 660.006 Scope 3: 12544.904 Scope 1+2: 7152.204 Scope 1+2+3: 19701.334

Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	0.8
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.042
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.152

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
--------------------------	---------------	-------	-------------

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	51.2 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	21.42%
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	18.72
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Principal adverse impacts are the most significant negative

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy		Metric tonnes	

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Ecosystem protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)		Scope 1: 6492.198 Scope 2: 660.006 Scope 3: 12544.904 Scope 1+2: 7152.204 Scope 1+2+3: 19701.334
Climate Risk policy	Ecosystem protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)
Ecosystem protection & Deforestation policy			
Climate Risk policy	Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	9.43
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	0.8
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
Portfolio USD SET SXX	Other	4.87%	N/A
WYNMAC 5.5% - 01/10/2027 Call	Gambling and betting activities	3.06%	MO
SANLTD 4.3% - 08/01/2026 Call	Gambling and betting activities	2.3%	MO
NWSZF 5.75% Var - 31/07/2024 Perp	Construction of buildings	2.27%	HK
ANZ 6.742% - 08/12/2032	Financial service activities, except insurance and pension funding	2.2%	AU
BHARTI 5.65% Var - 15/01/2025 Perp	Telecommunications	2.14%	IN

CATHAY 4.875% - 17/08/2026	Air transport	1.89%	HK
GLOPM 4.2% Var - 02/08/2026 Perp	Telecommunications	1.85%	PH
STCITY 6.5% - 15/01/2028 Call	Gambling and betting activities	1.83%	HK
CHOHIN 5.7% Var - 15/07/2024 Perp	Financial service activities, except insurance and pension funding	1.7%	HK

SANLTD 5.65% - 08/08/2028 Call	Gambling and betting activities	1.52%	MO

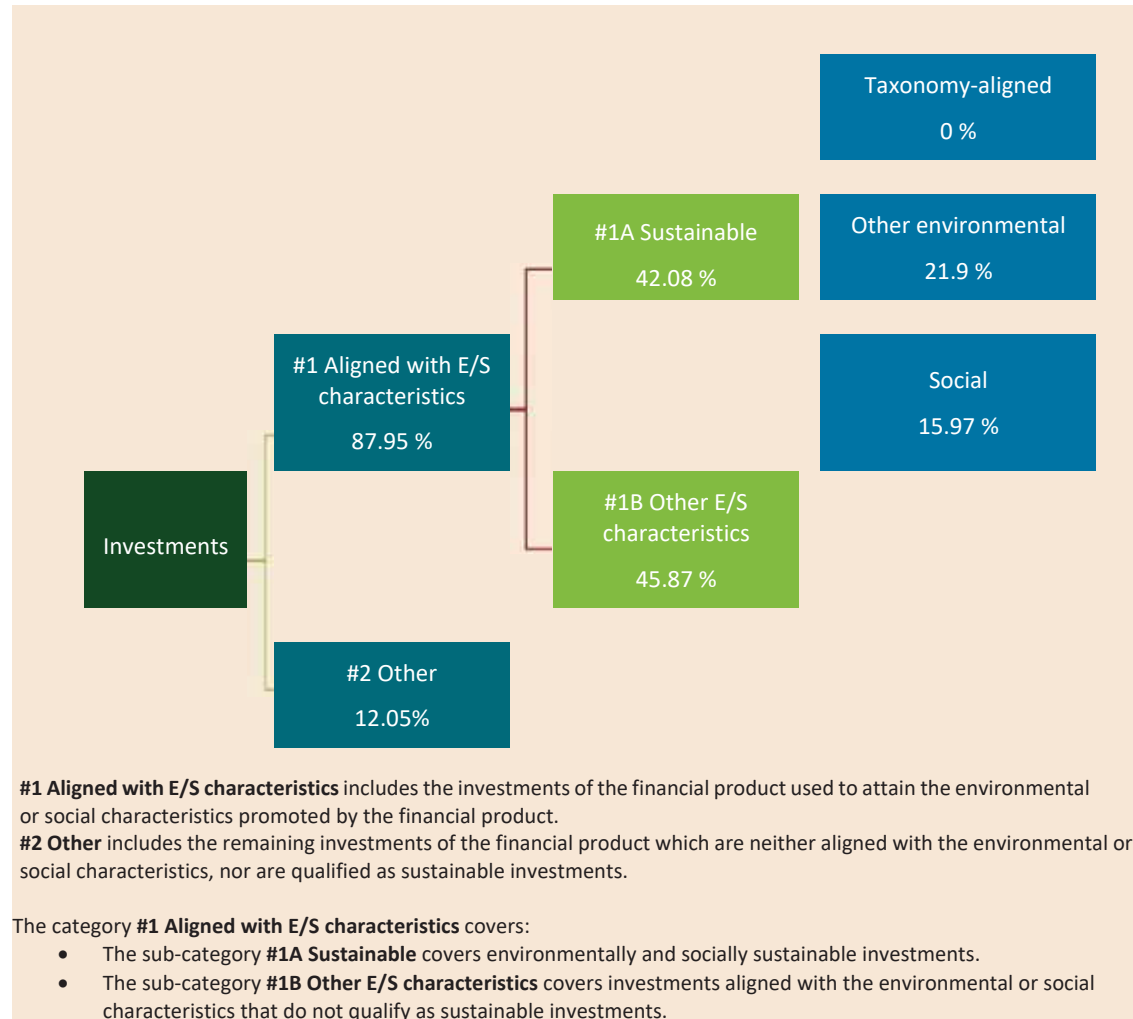

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	19.13%
Real estate activities	13.8%
Gambling and betting activities	12.1%
Electricity, gas, steam and air conditioning supply	6.15%
Public administration and defence; compulsory social security	5.58%
Telecommunications	5.47%
Accommodation	4.92%
Other	4.81%
Civil engineering	3.64%
Manufacture of basic metals	3.53%
Warehousing and support activities for transportation	3.22%
Construction of buildings	2.27%
Extraction of crude petroleum and natural gas	2.22%
Insurance, reinsurance and pension funding, except compulsory social security	2.16%
Air transport	2.13%
Manufacture of coke and refined petroleum products	2.03%
Manufacture of computer, electronic and optical products	1.34%
Computer programming, consultancy and related activities	1.21%
Activities auxiliary to financial services and insurance activities	0.97%
Information service activities	0.81%
Architectural and engineering activities; technical testing and analysis	0.75%
Manufacture of other non-metallic mineral products	0.42%
Manufacture of chemicals and chemical products	0.29%
Wholesale trade, except of motor vehicles and motorcycles	0.27%
Water collection, treatment and supply	0.27%
Manufacture of rubber and plastic products	0.25%
Retail trade, except of motor vehicles and motorcycles	0.21%
Manufacture of textiles	0.02%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

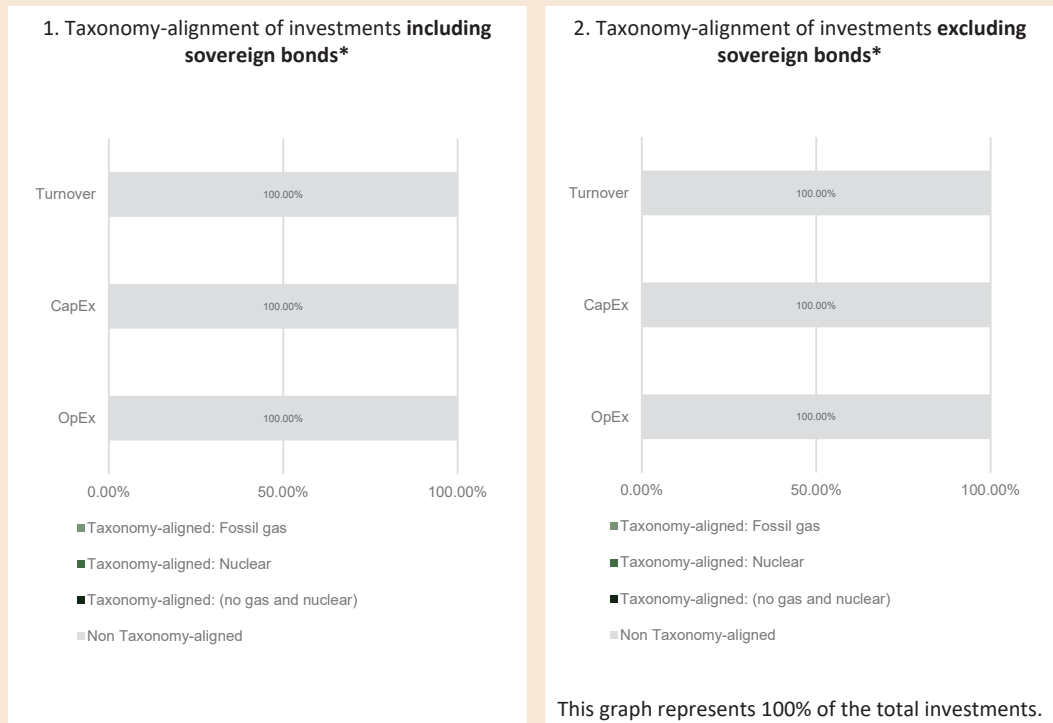

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 21.9% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 15.97% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 12.05% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ASIAN SHORT DURATION BONDS (the "Financial Product")

Entity LEI: 213800LZNVBI2B851392

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 32.08% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	5.83 / 10	5.02 / 10	90.71 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	5.42 / 10	4.73 / 10	89.4 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 11281.975 Scope 2: 2401.51 Scope 3: 27471.396 Scope 1+2: 13683.484 Scope 1+2+3: 40468.563
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 108.04 Scope 1+2+3: 240.692
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1299.499
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	6.47
SDG no significantly negative score	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 76.31
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE B: 4.727 Sector NACE C: 1.393 Sector NACE D: 15.182 Sector NACE F: 0.101 Sector NACE G: 0.194 Sector NACE H: 4.053 Sector NACE L: 0.674
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	0.33
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.039
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.445

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	42.09 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	24.52%
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	17.13
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 11281.975
Ecosystem protection & Deforestation policy			Scope 2: 2401.51 Scope 3: 27471.396 Scope 1+2: 13683.484 Scope 1+2+3: 40468.563
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 108.04
Ecosystem protection & Deforestation policy			Scope 1+2+3: 240.692
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1299.499
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	6.47
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	0.33
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
HKAA 2.1% Var - 08/03/2026 Perp	Warehousing and support activities for transportation	2.77%	HK
KOMRMR 3.25% - 17/04/2024	Other mining and quarrying	2.46%	MX
CCBL 3.5% - 16/05/2024	Financial service activities, except insurance and pension funding	2.42%	IE
CDBFLC 2.875% Var - 28/09/2030 Call	Financial service activities, except insurance and pension funding	2.35%	CN

SIASP 3% - 20/07/2026 Call	Air transport	2.17%	SG
CICCHK 1.625% - 26/01/2024	Financial service activities, except insurance and pension funding	1.86%	VG
BBTNIJ 4.2% - 23/01/2025	Financial service activities, except insurance and pension funding	1.84%	ID
EXIMBK 3.875% - 12/03/2024	Financial service activities, except insurance and pension funding	1.81%	IN
ICBCIL 3.625% - 19/05/2026	Financial service activities, except insurance and pension funding	1.75%	CN
CASHLD 4% Var - 12/07/2026 Perp	Telecommunications	1.74%	HK
OCBCSP 1.832% Var - 10/09/2030 Call	Financial service activities, except insurance and pension funding	1.73%	SG
EXIMTH 1.457% - 15/10/2025	Financial service activities, except insurance and pension funding	1.7%	TH
HWEUHC 4.125% - 05/07/2025	Civil engineering	1.68%	US
HSBC 7.336% Var - 03/11/2026 Call	Financial service activities, except insurance and pension funding	1.66%	GB
LOTCOR 4.5% - 01/08/2025	Real estate activities	1.65%	KR

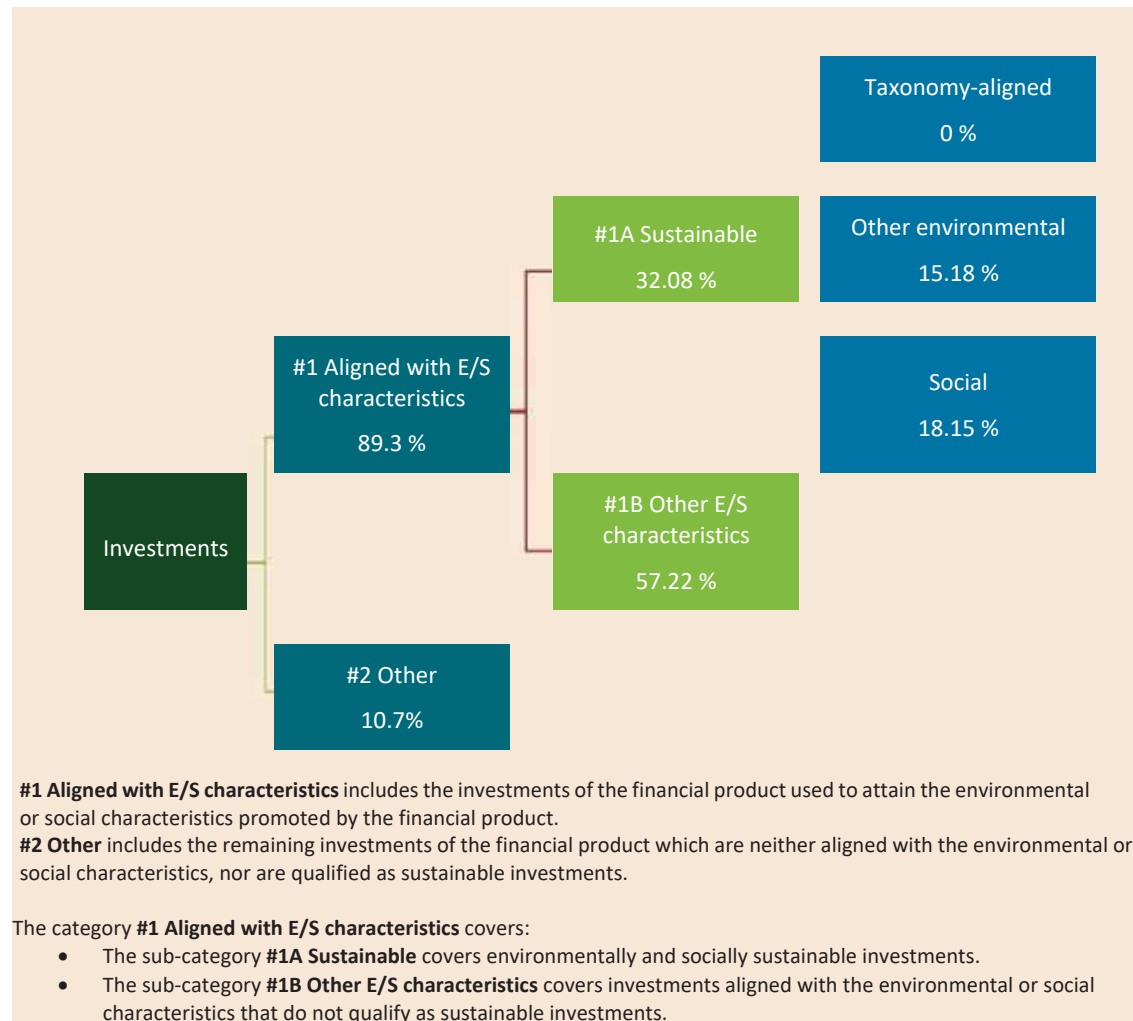

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	41.45%
Real estate activities	5.82%
Electricity, gas, steam and air conditioning supply	5.35%
Warehousing and support activities for transportation	4.96%
Telecommunications	4.11%
Manufacture of computer, electronic and optical products	4.06%
Gambling and betting activities	4.02%
Air transport	3.93%
Accommodation	3.55%
Public administration and defence; compulsory social security	3.02%
Civil engineering	2.9%
Land transport and transport via pipelines	2.55%
Other mining and quarrying	2.46%
Manufacture of coke and refined petroleum products	1.76%
Other	1.65%
Manufacture of chemicals and chemical products	1.46%
Information service activities	1.31%
Activities auxiliary to financial services and insurance activities	1.26%
Insurance, reinsurance and pension funding, except compulsory social security	1.08%
Extraction of crude petroleum and natural gas	0.67%
Manufacture of other transport equipment	0.47%
Travel agency, tour operator and other reservation service and related activities	0.46%
Manufacture of basic metals	0.44%
Retail trade, except of motor vehicles and motorcycles	0.37%
Manufacture of electrical equipment	0.34%
Architectural and engineering activities; technical testing and analysis	0.28%
Construction of buildings	0.26%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 15.18% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 18.15% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 10.7% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

● **How did this financial product perform compared to the reference benchmark?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - DEFENSIVE OPTIMAL INCOME (the "Financial Product") Entity LEI: 2138007QLQUSNAEZDQ61

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 63.72% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	7.43 / 10	6.28 / 10	98.89 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	7.33 / 10	6.15 / 10	98.7 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 7281.145 Scope 2: 1872.214 Scope 3: 137981.781 Scope 1+2: 9153.359 Scope 1+2+3: 146716.281

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.009
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	36.912

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	18.8 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.78%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	37.04
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 7281.145
Ecosystem protection & Deforestation policy			Scope 2: 1872.214 Scope 3: 137981.781 Scope 1+2: 9153.359 Scope 1+2+3: 146716.281
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 46.314
Ecosystem protection & Deforestation policy			Scope 1+2+3: 683.461
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1695.869
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	7.83
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 58.14 Energy Production: 62.79
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	5.44
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	37.04
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
ISHARES PHYSICAL GOLD ETC	Financial service activities, except insurance and pension funding	4.29%	IE
AXA IM FIIS Europe Short Duration High Yield A Cap	Financial service activities, except insurance and pension funding	3.5%	LU
MICROSOFT CORP XNGS USD	Publishing activities	2.18%	US
Portfolio EUR SET SSX	Other	1.94%	N/A
AXA WF Inflation Plus M Capitalisation EUR	Financial service activities, except insurance and pension funding	1.88%	LU
NESTLE SA-REG XSWX CHF	Manufacture of food products	1.7%	CH
STELLANTIS NV XPAR EUR	Manufacture of motor vehicles, trailers and semi-trailers	1.3%	NL
PRYSMIAN SPA MTAA EUR	Manufacture of electrical equipment	1.17%	IT
KEYENCE CORP XTKS JPY	Manufacture of machinery and equipment n.e.c.	1.1%	JP
VOLVO AB-B SHS XSTO SEK	Manufacture of motor vehicles, trailers and semi-trailers	1.05%	SE
Portfolio 256 USD IMN GSI	Other	0.92%	N/A
TESLA INC XNGS USD	Manufacture of motor vehicles, trailers and semi-trailers	0.9%	US
BEAZLEY PLC XLON GBP	Insurance, reinsurance and pension funding, except compulsory social security	0.9%	GB
BNP PARIBAS XPAR EUR	Financial service activities, except insurance and pension funding	0.87%	FR
RIO TINTO PLC XLON GBP	Mining of metal ores	0.86%	GB

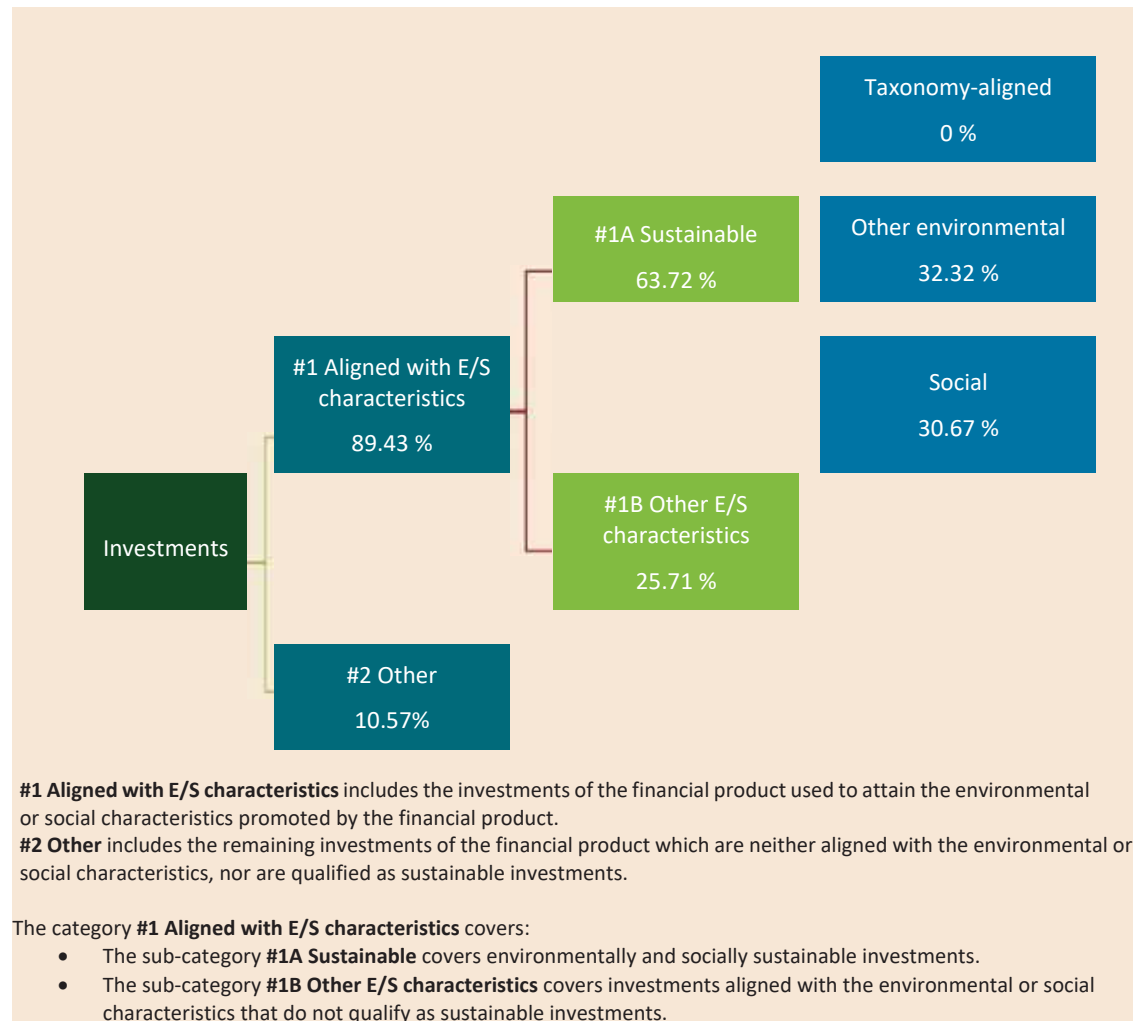

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	32.22%
Electricity, gas, steam and air conditioning supply	5.55%
Manufacture of motor vehicles, trailers and semi-trailers	5.28%
Information service activities	4.22%
Publishing activities	4.2%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.68%
Manufacture of machinery and equipment n.e.c.	3.47%
Telecommunications	3.41%
Activities auxiliary to financial services and insurance activities	3.04%
Other	2.82%
Real estate activities	2.65%
Manufacture of electrical equipment	2.61%
Insurance, reinsurance and pension funding, except compulsory social security	2.5%
Manufacture of coke and refined petroleum products	2.31%
Other manufacturing	2.2%
Manufacture of food products	2.19%
Retail trade, except of motor vehicles and motorcycles	1.85%
Warehousing and support activities for transportation	1.78%
Manufacture of beverages	1.62%
Manufacture of chemicals and chemical products	1.59%
Manufacture of computer, electronic and optical products	1.42%
Mining of metal ores	1.31%
Public administration and defence; compulsory social security	0.96%
Manufacture of leather and related products	0.69%
Computer programming, consultancy and related activities	0.68%
Manufacture of other non-metallic mineral products	0.65%
Manufacture of rubber and plastic products	0.43%
Rental and leasing activities	0.43%
Civil engineering	0.42%

Printing and reproduction of recorded media	0.4%
Advertising and market research	0.36%
Manufacture of paper and paper products	0.33%
Scientific research and development	0.32%
Land transport and transport via pipelines	0.29%
Water collection, treatment and supply	0.28%
Mining support service activities	0.27%
Accommodation	0.22%
Postal and courier activities	0.21%
Crop and animal production, hunting and related service activities	0.2%
Food and beverage service activities	0.17%
Manufacture of other transport equipment	0.15%
Sports activities and amusement and recreation activities	0.14%
Waste collection, treatment and disposal activities; materials recovery	0.14%
Wholesale trade, except of motor vehicles and motorcycles	0.11%
Air transport	0.1%
Manufacture of wearing apparel	0.1%
Motion picture, video and television programme production, sound recording and music publishing activities	0.01%
Construction of buildings	0.01%
Activities of head offices; management consultancy activities	0.01%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 32.32% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 30.67% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 10.57% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - DIGITAL ECONOMY (the "Financial Product") Entity LEI: 213800YT909E4S3MZV07

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 64.9% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	32.67 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	173.19 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.55 %
Water Intensity	130.65 Thousands of cubic meters for corporates	5549.86 Thousands of cubic meters for corporates	99.55 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	33.95 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	238.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.41 %
Water intensity	2022	189.61 Thousands of cubic meters for corporates	11618.89 Thousands of cubic meters for corporates	99.41 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 1729.341 Scope 2: 1679.239 Scope 3: 26774.688 Scope 1+2: 3408.58 Scope 1+2+3: 29228.141

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	72.42 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.2%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	32.82
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 1729.341
Ecosystem protection & Deforestation policy			Scope 2: 1679.239 Scope 3: 26774.688 Scope 1+2: 3408.58 Scope 1+2+3: 29228.141
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 4.52
Ecosystem protection & Deforestation policy			Scope 1+2+3: 34.258
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 299.549
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	N/A
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 40.09
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	N/A

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	32.82
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies

may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	4.09%	US
MICROSOFT CORP XNGS USD	Publishing activities	4.07%	US
SALESFORCE INC XNYS USD	Publishing activities	3.99%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	3.93%	US
SERVICENOW INC XNYS USD	Publishing activities	3.81%	US
ALPHABET INC-CL C XNGS USD	Information service activities	3.8%	US
BOOKING HOLDINGS INC XNGS USD	Information service activities	3.68%	US
WORKDAY INC-CLASS A XNGS USD	Publishing activities	3.67%	US
GOODMAN GROUP XASX AUD	Real estate activities	3.61%	AU
PROLOGIS INC XNYS USD	Real estate activities	3.55%	US
NETFLIX INC XNGS USD	Information service activities	3.21%	US
Portfolio USD SET SSX	Other	3.13%	N/A
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	3.1%	US
ACCENTURE PLC XNYS USD	Computer programming, consultancy and related activities	2.95%	IE
GLOBAL PAYMENTS INC XNYS USD	Activities auxiliary to financial services and insurance activities	2.79%	US

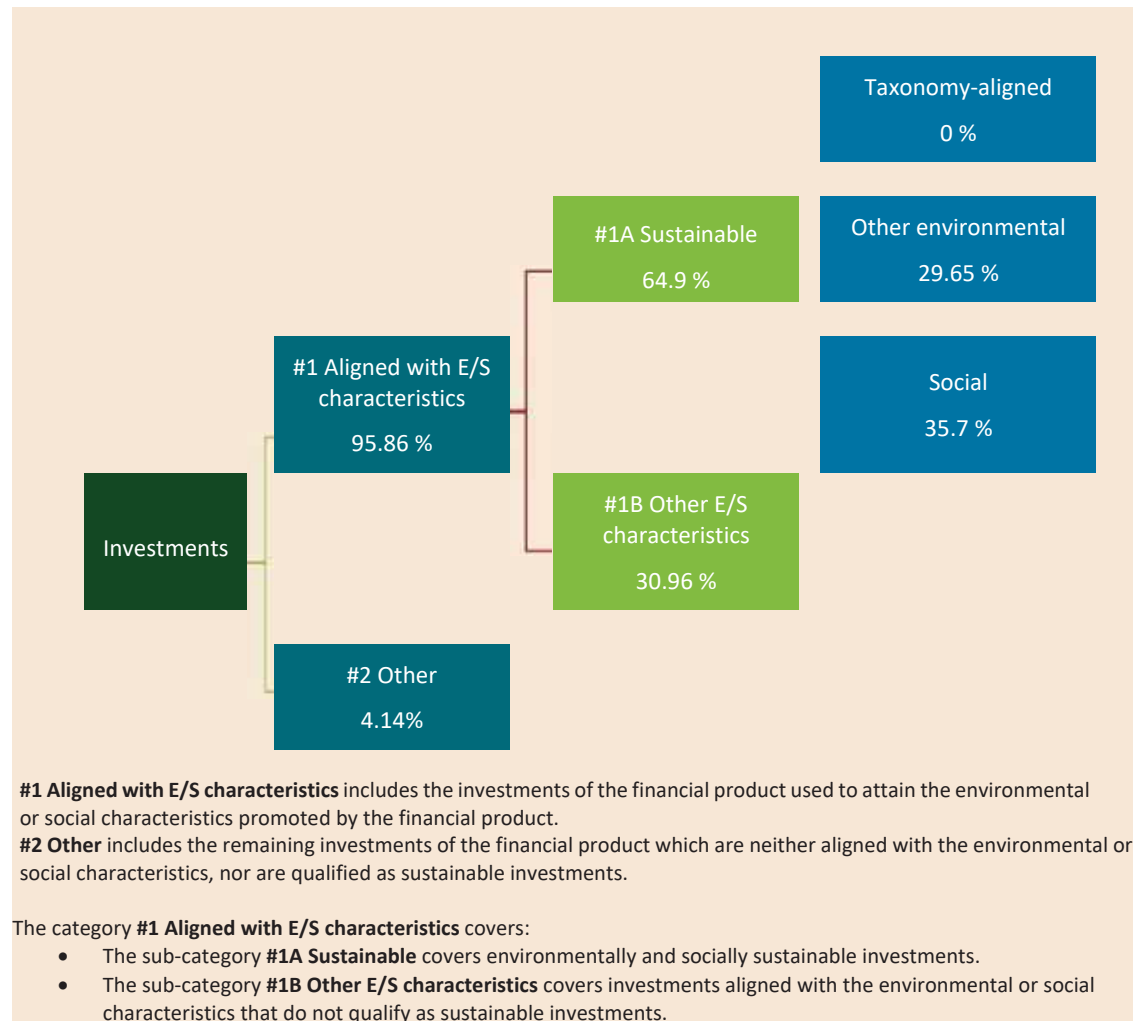

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Publishing activities	41.06%
Information service activities	19.32%
Real estate activities	9.42%
Activities auxiliary to financial services and insurance activities	7.38%
Retail trade, except of motor vehicles and motorcycles	6.36%
Computer programming, consultancy and related activities	6.15%
Manufacture of computer, electronic and optical products	4.09%
Other	3.18%
Postal and courier activities	1.53%
Security and investigation activities	1.51%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 29.65% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 35.7% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 4.14% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EMERGING Entity LEI: 213800UAPEX4GSMEI340
 MARKETS RESPONSIBLE EQUITY QI (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 48.83% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product uses an ‘extra-financial indicator improvement’ approach, and outperformed Carbon intensity by at least 20% compared to its Benchmark MSCI Emerging Markets Total Return Net during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	211.4 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	479.81 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.72 %
Water Intensity	4279.82 Thousands of cubic meters for corporates	10005.91 Thousands of cubic meters for corporates	99.72 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	6.35 / 10	5.36 / 10	97.02 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 6025.752 Scope 2: 1868.599 Scope 3: 38010.109 Scope 1+2: 7894.351 Scope 1+2+3: 45226.781
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 89.495 Scope 1+2+3: 494.334
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1442.581
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	5.71
SDG no significantly negative score	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 71.04 Energy Production: 51.12
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE B: 1.159 Sector NACE C: 6.765 Sector NACE D: 1.728 Sector NACE F: 0.052 Sector NACE G: 0.126 Sector NACE H: 1.943 Sector NACE L: 0.006
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	3.2
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.006
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	97.212

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	41.76 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	24.41%
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	18.51
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 6025.752
Ecosystem protection & Deforestation policy			Scope 2: 1868.599
			Scope 3: 38010.109
			Scope 1+2: 7894.351
			Scope 1+2+3: 45226.781
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 89.495
Ecosystem protection & Deforestation policy			Scope 1+2+3: 494.334
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1442.581
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	5.71
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	3.2
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
TAIWAN SEMICONDUCTOR MANUFAC XTAI TWD	Manufacture of machinery and equipment n.e.c.	7.99%	TW
SAMSUNG ELECTRONICS CO LTD XKRX KRW	Manufacture of computer, electronic and optical products	4.43%	KR
ALIBABA GROUP HOLDING LTD XHKG HKD	Retail trade, except of motor vehicles and motorcycles	2.13%	CN

WALMART DE MEXICO SAB DE CV XMEX MXN	Retail trade, except of motor vehicles and motorcycles	1.88%	MX
GRUPO FINANCIERO BANORTE-O XMEX MXN	Financial service activities, except insurance and pension funding	1.87%	MX
Portfolio USD SET SSD	Other	1.82%	N/A
HDFC BANK LIMITED XNSE INR	Financial service activities, except insurance and pension funding	1.8%	IN
NASPERS LTD-N SHS XJSE ZAR	Information service activities	1.77%	ZA
TATA CONSULTANCY SVCS LTD XNSE INR	Computer programming, consultancy and related activities	1.72%	IN
DINO POLSKA SA XWAR PLN	Retail trade, except of motor vehicles and motorcycles	1.57%	PL

RELIANCE INDUSTRIES LTD XNSE INR	Manufacture of coke and refined petroleum products	1.4%	IN
YUM CHINA HOLDINGS INC XNYS USD	Food and beverage service activities	1.39%	CN

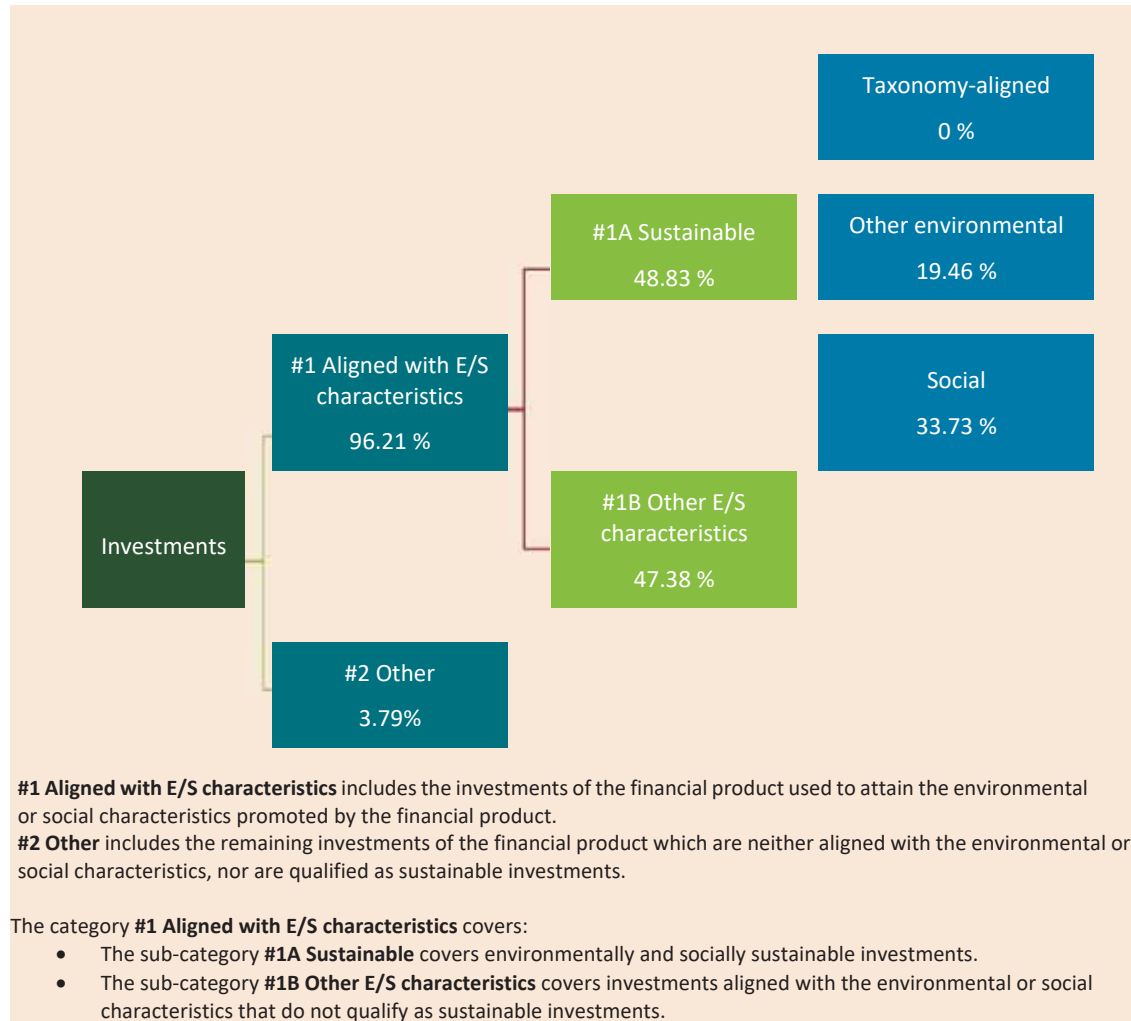

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	15.78%
Manufacture of computer, electronic and optical products	11.46%
Retail trade, except of motor vehicles and motorcycles	9.01%
Manufacture of machinery and equipment n.e.c.	8.54%
Manufacture of electrical equipment	4.32%
Manufacture of chemicals and chemical products	4.06%
Telecommunications	3.87%
Insurance, reinsurance and pension funding, except compulsory social security	3.62%
Manufacture of beverages	3.21%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.12%
Information service activities	2.95%
Computer programming, consultancy and related activities	2.87%
Other	2.38%
Wholesale trade, except of motor vehicles and motorcycles	2.19%
Manufacture of coke and refined petroleum products	2.05%
Human health activities	1.96%
Manufacture of motor vehicles, trailers and semi-trailers	1.89%
Manufacture of food products	1.67%
Mining of metal ores	1.54%
Activities auxiliary to financial services and insurance activities	1.52%
Electricity, gas, steam and air conditioning supply	1.51%
Food and beverage service activities	1.39%
Publishing activities	1.32%
Manufacture of paper and paper products	1%
Other manufacturing	0.94%
Manufacture of other non-metallic mineral products	0.94%
Architectural and engineering activities; technical testing and analysis	0.87%
Other personal service activities	0.8%

Motion picture, video and television programme production, sound recording and music publishing activities	0.78%
Real estate activities	0.31%
Manufacture of other transport equipment	0.25%
Civil engineering	0.22%
Scientific research and development	0.22%
Gambling and betting activities	0.19%
Construction of buildings	0.18%
Manufacture of wearing apparel	0.15%
Office administrative, office support and other business support activities	0.15%
Water transport	0.12%
Manufacture of textiles	0.12%
Land transport and transport via pipelines	0.11%
Manufacture of basic metals	0.1%
Warehousing and support activities for transportation	0.06%
Postal and courier activities	0.06%
Manufacture of rubber and plastic products	0.05%
Sewerage	0.04%
Mining support service activities	0.02%
Air transport	0.02%
Accommodation	0.02%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

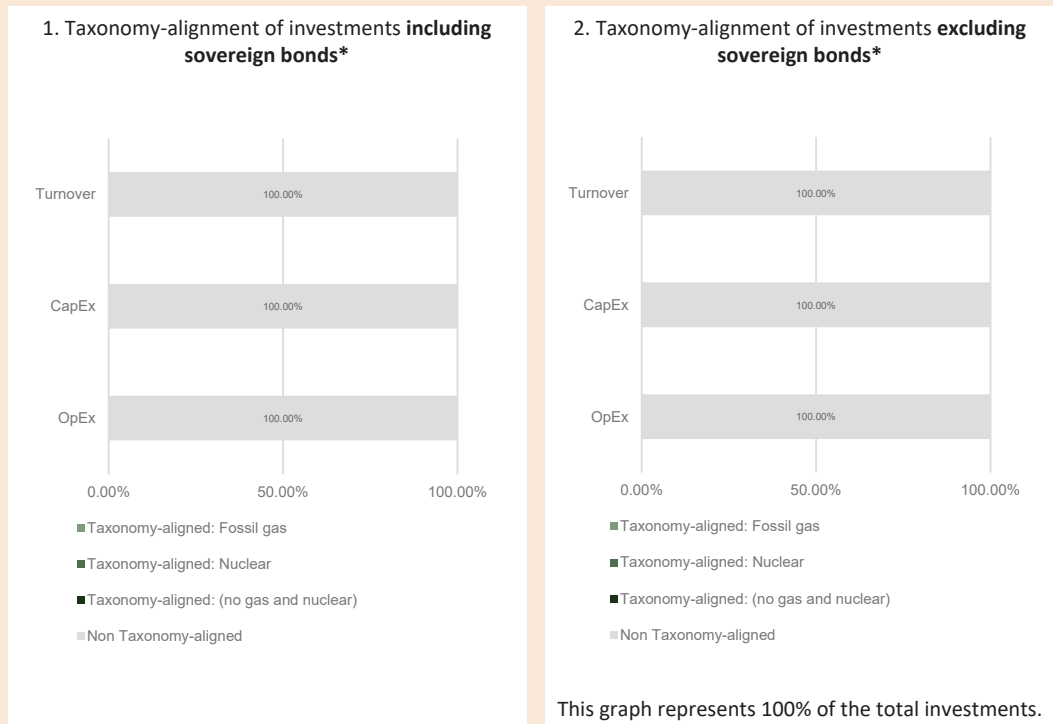

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 19.46% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 33.73% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 3.79% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

● **How did this financial product perform compared to the reference benchmark?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO 7-10 Entity LEI: 213800BPPRBYRDW39K69 (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 49.66% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.08 / 10	6.7 / 10	98.38 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	7.06 / 10	6.57 / 10	98.59 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 4758.349 Scope 2: 657.951 Scope 3: 25796.734 Scope 1+2: 5416.3 Scope 1+2+3: 31171.426
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 106.197 Scope 1+2+3: 184.648

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.279
-------------------------------------	--	--	-------

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	5.31 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.82%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	37.91
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 4758.349
Ecosystem protection & Deforestation policy			Scope 2: 657.951 Scope 3: 25796.734 Scope 1+2: 5416.3 Scope 1+2+3: 31171.426
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 106.197 Scope 1+2+3: 184.648

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
BTPS 0.9% - 01/04/2031	Public administration and defence; compulsory social security	4.76%	IT
FRTR 2% - 25/11/2032	Public administration and defence; compulsory social security	4.12%	FR
SPGB 0.7% - 30/04/2032	Public administration and defence; compulsory social security	4.08%	ES
BGB 0.35% - 22/06/2032	Public administration and defence; compulsory social security	3.09%	BE
SPGB 1.95% - 30/07/2030	Public administration and defence; compulsory social security	2.94%	ES
PF 10680 EUR Settlement Acc at SSX	Other	2.93%	N/A
RAGB 2.9% - 20/02/2033	Public administration and defence; compulsory social security	2.91%	AT
SPGB 0.5% - 31/10/2031	Public administration and defence; compulsory social security	2.24%	ES
BTPS 5.75% - 01/02/2033	Public administration and defence; compulsory social security	2.18%	IT
BTPS 4% - 30/10/2031	Public administration and defence; compulsory social security	1.97%	IT
AXA WF ACT Social Bonds M Capitalisation EUR	Other	1.71%	LU
BGB 1.25% - 22/04/2033	Public administration and defence; compulsory social security	1.61%	BE
BTPS 1.35% - 01/04/2030	Public administration and defence; compulsory social security	1.38%	IT
RAGB 0.9% - 20/02/2032	Public administration and defence; compulsory social security	1.27%	AT
ASIA 1.95% - 22/07/2032	Activities of extraterritorial organisations and bodies	1.05%	PH

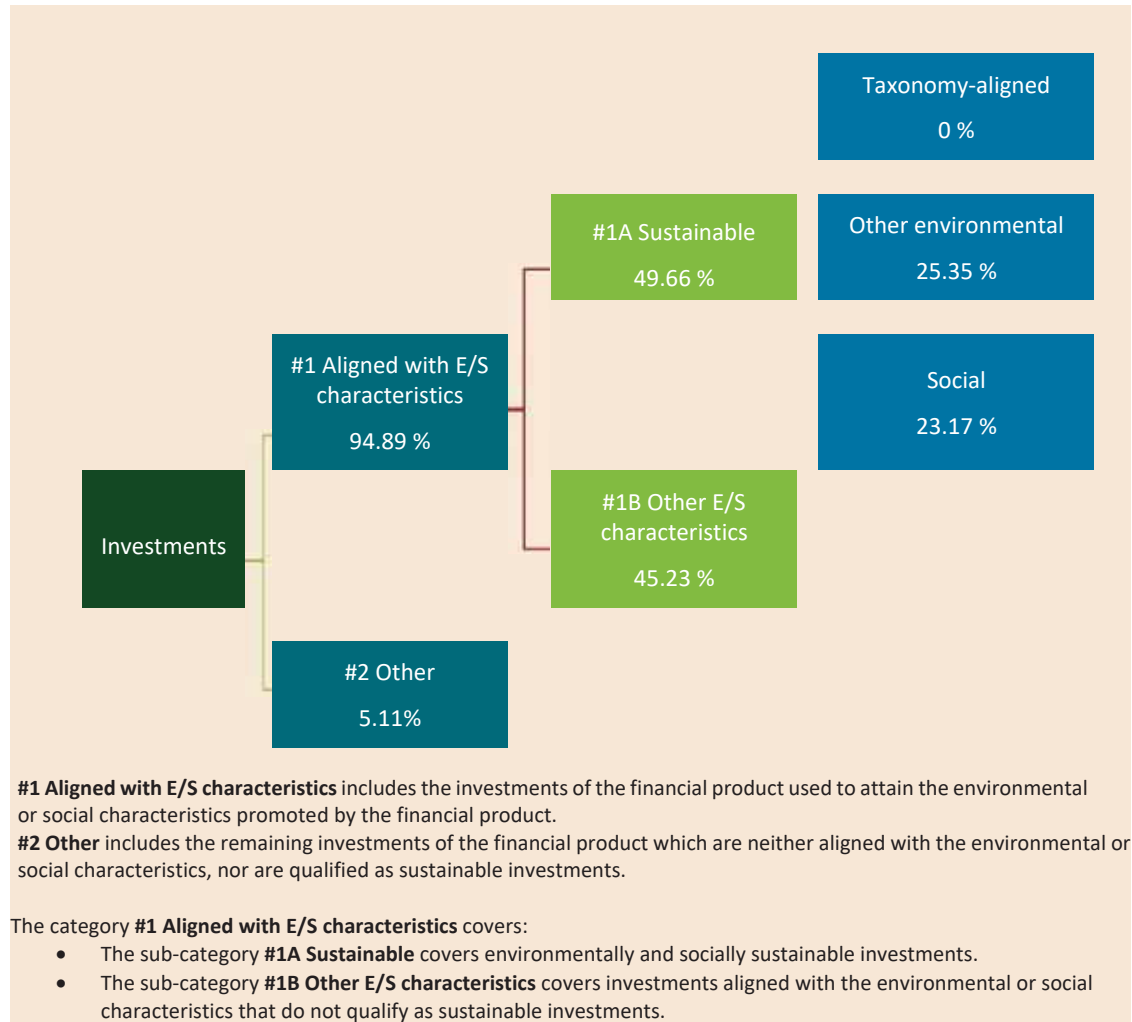

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● **In which economic sectors were the investments made?**

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	42.08%
Financial service activities, except insurance and pension funding	22.36%
Electricity, gas, steam and air conditioning supply	5.43%
Other	5.15%
Insurance, reinsurance and pension funding, except compulsory social security	3.73%
Real estate activities	3.46%
Activities of extraterritorial organisations and bodies	2.61%
Warehousing and support activities for transportation	2.21%
Telecommunications	2.16%
Manufacture of motor vehicles, trailers and semi-trailers	2.04%
Manufacture of chemicals and chemical products	1.15%
Manufacture of beverages	1.07%
Manufacture of coke and refined petroleum products	0.96%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.92%
Manufacture of food products	0.79%
Manufacture of paper and paper products	0.65%
Manufacture of computer, electronic and optical products	0.57%
Land transport and transport via pipelines	0.52%
Manufacture of other non-metallic mineral products	0.46%
Retail trade, except of motor vehicles and motorcycles	0.37%
Advertising and market research	0.37%
Information service activities	0.29%
Water collection, treatment and supply	0.26%
Manufacture of leather and related products	0.2%
Manufacture of electrical equipment	0.19%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 25.35% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 23.17% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 5.11% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO 10+LT Entity LEI: 213800BZN8BM2BYMBD28 (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="checkbox"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 36.2% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6.73 / 10	6.44 / 10	99.23 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	6.79 / 10	6.36 / 10	99.07 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 739.32 Scope 2: 93.466 Scope 3: 2941.667 Scope 1+2: 832.786 Scope 1+2+3: 3755.424

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	1.83 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.72%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	38.44
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 739.32
Ecosystem protection & Deforestation policy			Scope 2: 93.466
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 3: 2941.667
Ecosystem protection & Deforestation policy			Scope 1+2: 832.786
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 3755.424
Ecosystem protection & Deforestation policy			Scope 1+2: 105.935
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	Scope 1+2+3: 74.092
Ecosystem protection & Deforestation policy			Scope 1+2+3: 1345.383
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	2.59
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	Energy Consumption: 58.49
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	Energy Production: 65.65
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	2.24
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
FRTR 4% - 25/04/2055	Public administration and defence; compulsory social security	5.45%	FR
BTPS 3.1% - 01/03/2040	Public administration and defence; compulsory social security	5.45%	IT
FRTR 0.5% - 25/05/2040	Public administration and defence; compulsory social security	4.46%	FR
SPGB 4.2% - 31/01/2037	Public administration and defence; compulsory social security	3.34%	ES
DBR 3.25% - 04/07/2042	Public administration and defence; compulsory social security	3.27%	DE
DBR 4.75% - 04/07/2040	Public administration and defence; compulsory social security	2.71%	DE
BTPS 4.75% - 01/09/2044	Public administration and defence; compulsory social security	2.66%	IT
SPGB 4.9% - 30/07/2040	Public administration and defence; compulsory social security	2.58%	ES
PF 10681 EUR Settlement Acc at SSX	Other	2.53%	N/A
BTPS 4% - 01/02/2037	Public administration and defence; compulsory social security	2.29%	IT
SPGB 2.7% - 31/10/2048	Public administration and defence; compulsory social security	2.17%	ES
RAGB 2.4% - 23/05/2034	Public administration and defence; compulsory social security	1.98%	AT
BGB 2.75% - 22/04/2039	Public administration and defence; compulsory social security	1.75%	BE
RAGB 0.25% - 20/10/2036	Public administration and defence; compulsory social security	1.72%	AT
BGB 5% - 28/03/2035	Public administration and defence; compulsory social security	1.7%	BE

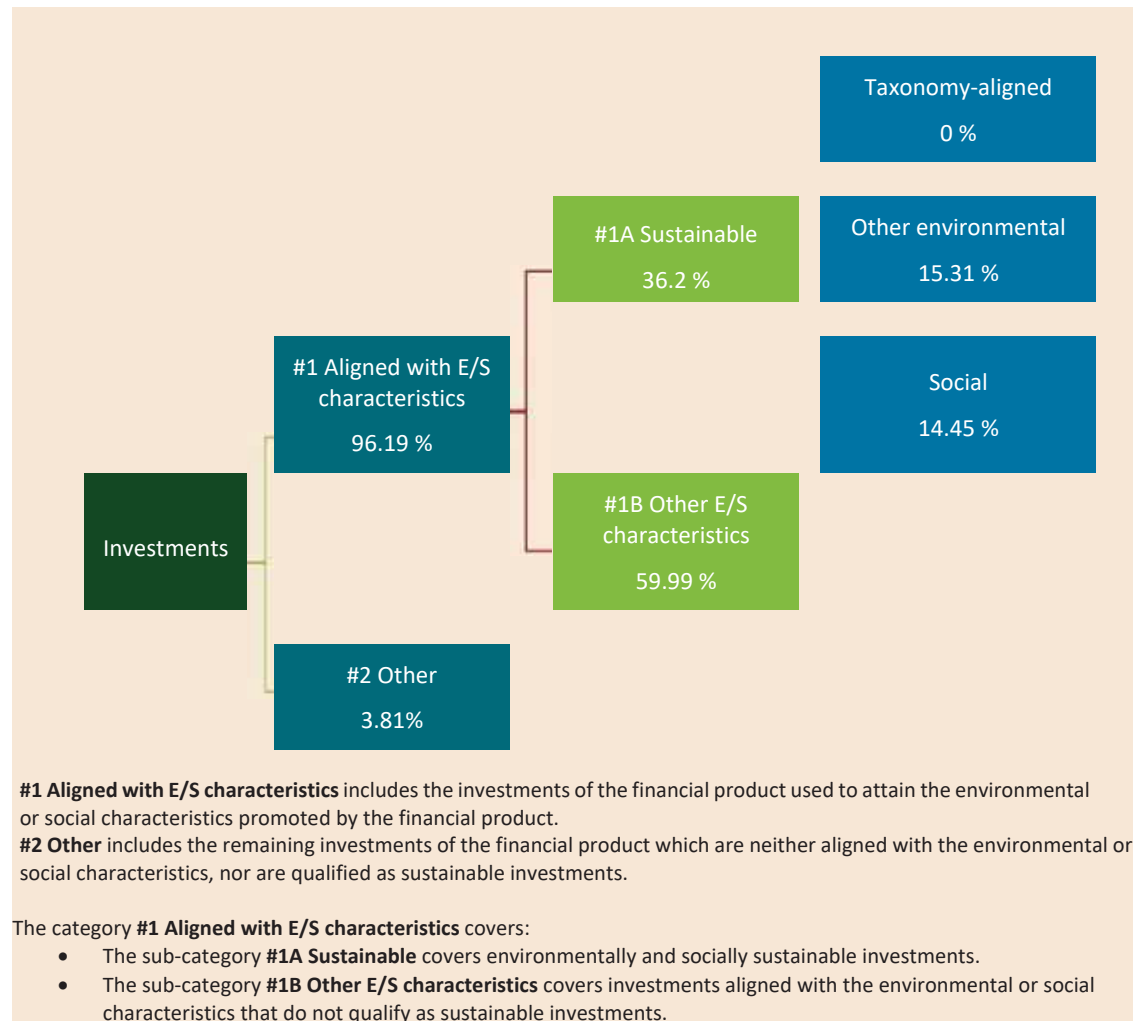

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	61.6%
Financial service activities, except insurance and pension funding	10.51%
Activities of extraterritorial organisations and bodies	6.97%
Other	4.28%
Electricity, gas, steam and air conditioning supply	3.41%
Insurance, reinsurance and pension funding, except compulsory social security	2.96%
Telecommunications	2.2%
Real estate activities	1.93%
Warehousing and support activities for transportation	1.73%
Manufacture of beverages	1.37%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.01%
Manufacture of motor vehicles, trailers and semi-trailers	0.59%
Manufacture of computer, electronic and optical products	0.37%
Postal and courier activities	0.34%
Land transport and transport via pipelines	0.19%
Information service activities	0.18%
Manufacture of leather and related products	0.17%
Manufacture of electrical equipment	0.11%
Manufacture of chemicals and chemical products	0.07%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

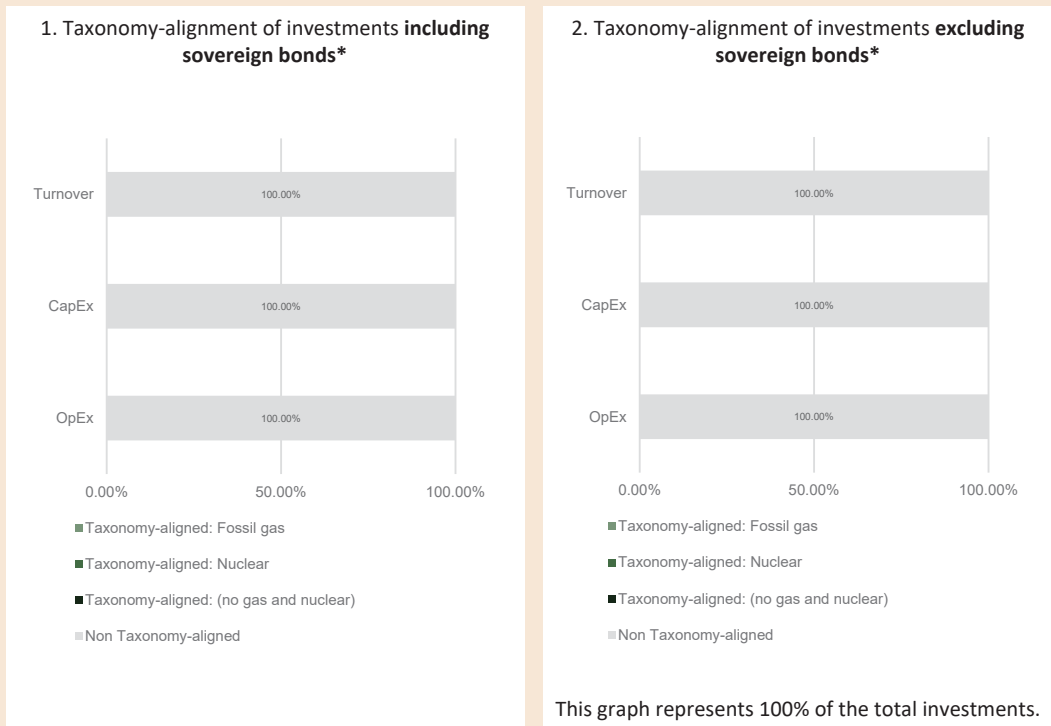

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 15.31% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 14.45% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 3.81% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO BONDS (the "Financial Product")

Entity LEI: 213800N97SPA2JJB880

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 51.82% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.17/10	6.7/10	91.62 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	7.08 / 10	6.6 / 10	98.62 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	3.9 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.91%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	38.88
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 7986.573

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
AXA WF ACT Social Bonds M Capitalisation EUR	Other	2.13%	LU
FRTR 1.75% - 25/06/2039	Public administration and defence; compulsory social security	2.08%	FR
RAGB 2.9% - 20/02/2033	Public administration and defence; compulsory social security	2.05%	AT
DBR 4.25% - 04/07/2039	Public administration and defence; compulsory social security	1.89%	DE
SPGB 6% - 31/01/2029	Public administration and defence; compulsory social security	1.88%	ES
PF 216 EUR Settlement Acc at SSX	Other	1.62%	N/A
BTPS 1.35% - 01/04/2030	Public administration and defence; compulsory social security	1.59%	IT
BTPS 1.45% - 15/05/2025	Public administration and defence; compulsory social security	1.54%	IT
BTPS 4.5% - 01/03/2026	Public administration and defence; compulsory social security	1.52%	IT
SPGB 1.25% - 31/10/2030	Public administration and defence; compulsory social security	1.47%	ES
FRTR 1.5% - 25/05/2050	Public administration and defence; compulsory social security	1.41%	FR
DBR 0.25% - 15/02/2029	Public administration and defence; compulsory social security	1.25%	DE
BTPS 0 - 15/12/2024	Public administration and defence; compulsory social security	1.23%	IT
BTPS 0.95% - 15/09/2027	Public administration and defence; compulsory social security	1.2%	IT
SPGB 5.9% - 30/07/2026	Public administration and defence; compulsory social security	1.18%	ES

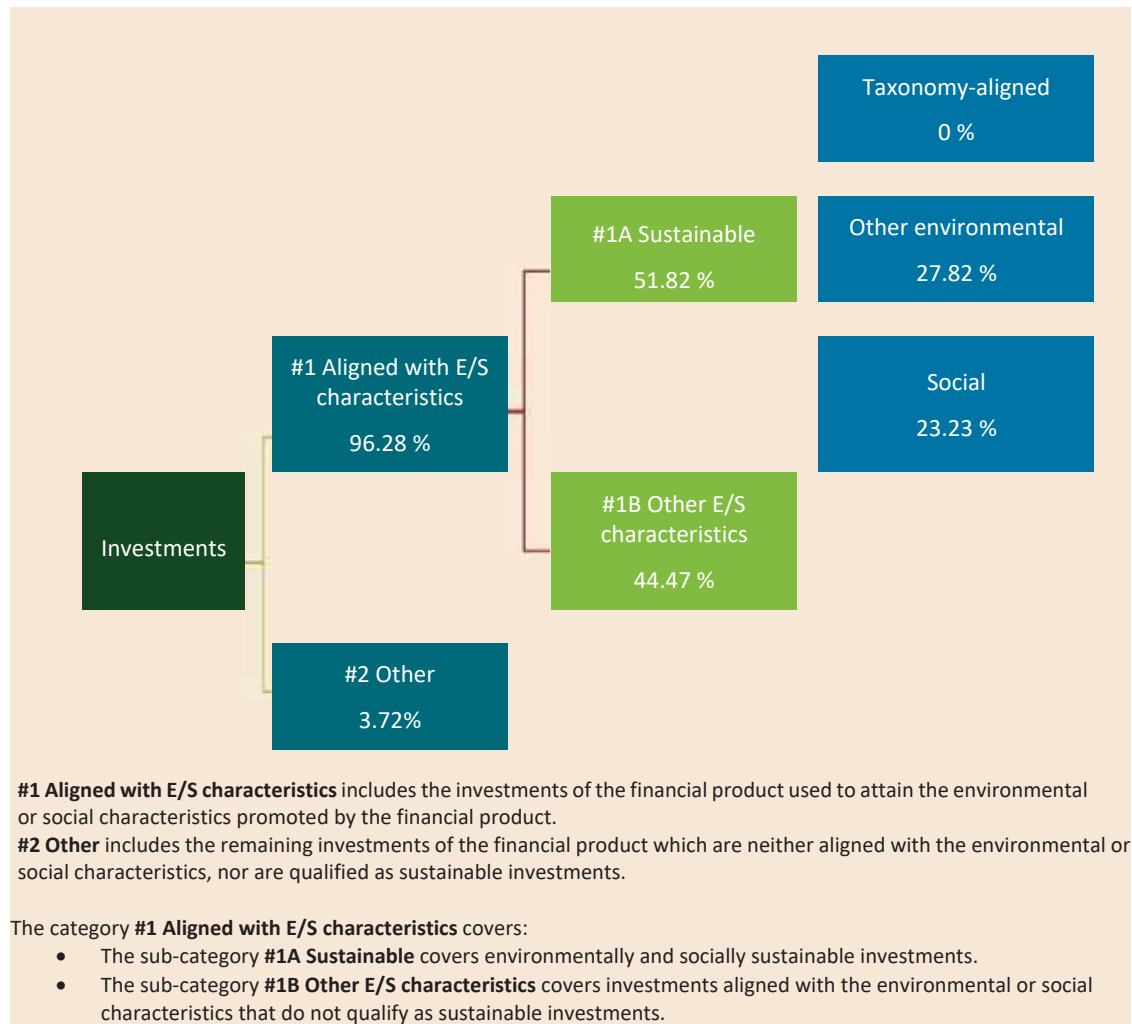

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● **In which economic sectors were the investments made?**

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	45.89%
Financial service activities, except insurance and pension funding	23.77%
Electricity, gas, steam and air conditioning supply	4.19%
Other	3.94%
Real estate activities	3.41%
Insurance, reinsurance and pension funding, except compulsory social security	3.39%
Telecommunications	2.99%
Manufacture of motor vehicles, trailers and semi-trailers	1.99%
Manufacture of beverages	1.78%
Warehousing and support activities for transportation	1.42%
Activities of extraterritorial organisations and bodies	1.04%
Land transport and transport via pipelines	1.01%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.83%
Water collection, treatment and supply	0.76%
Advertising and market research	0.62%
Manufacture of coke and refined petroleum products	0.53%
Other manufacturing	0.38%
Manufacture of food products	0.36%
Rental and leasing activities	0.32%
Activities auxiliary to financial services and insurance activities	0.31%
Manufacture of computer, electronic and optical products	0.26%
Manufacture of chemicals and chemical products	0.22%
Manufacture of wearing apparel	0.22%
Manufacture of leather and related products	0.21%
Retail trade, except of motor vehicles and motorcycles	0.15%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 27.82% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 23.23% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 3.72% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO BUY **Entity LEI:** 213800YNBXQUVXK3YX10
 AND MAINTAIN SUSTAINABLE CREDIT (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="radio"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 80.85% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	110.43 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	138.97 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.82 %
Water Intensity	2703.97 Thousands of cubic meters for corporates	4776.06 Thousands of cubic meters for corporates	95.78 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	148.83 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	192.56 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.41 %
Water intensity	2022	13050.17 Thousands of cubic meters for corporates	18076.7 Thousands of cubic meters for corporates	95.41 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 4942.069 Scope 2: 1145.134 Scope 3: 42427.758 Scope 1+2: 6087.204 Scope 1+2+3: 48343.914

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 4942.069

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
Portfolio EUR SET SXX	Other	0.84%	N/A
SEGPLP 0.875% - 27/05/2029 Call	Real estate activities	0.84%	LU
ASSGEN 2.429% - 14/07/2031 Call	Insurance, reinsurance and pension funding, except compulsory social security	0.83%	IT

VOD 1.6% - 29/07/2031	Telecommunications	0.78%	GB

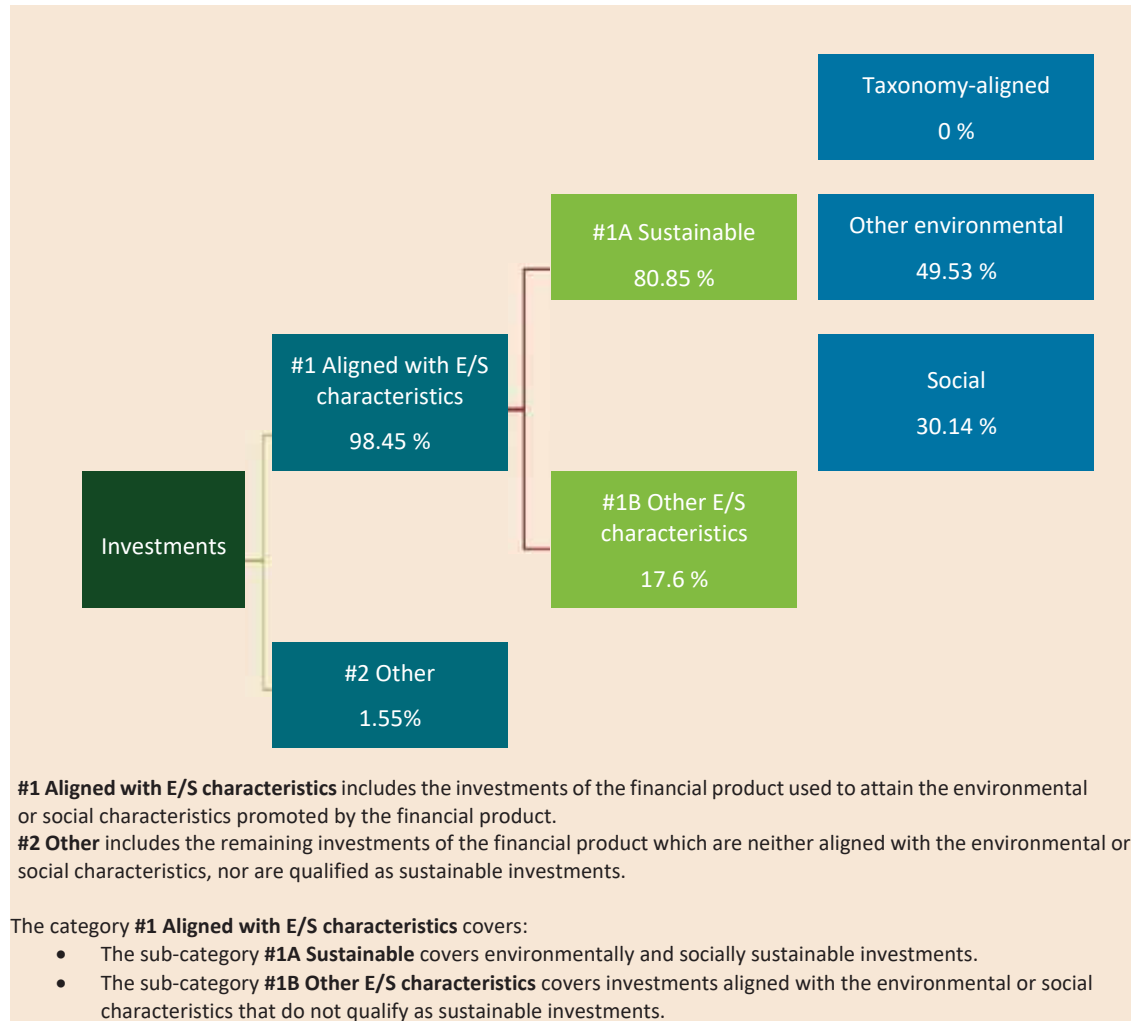

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	27.68%
Electricity, gas, steam and air conditioning supply	9.73%
Insurance, reinsurance and pension funding, except compulsory social security	5.51%
Manufacture of motor vehicles, trailers and semi-trailers	5.34%
Real estate activities	5%
Telecommunications	4.03%
Manufacture of beverages	3.68%
Manufacture of paper and paper products	3.27%
Manufacture of chemicals and chemical products	3.01%
Activities auxiliary to financial services and insurance activities	2.77%
Warehousing and support activities for transportation	2.7%
Manufacture of computer, electronic and optical products	2.55%
Other	1.94%
Postal and courier activities	1.71%
Manufacture of electrical equipment	1.69%
Other manufacturing	1.68%
Advertising and market research	1.66%
Information service activities	1.49%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.41%
Manufacture of machinery and equipment n.e.c.	1.34%
Land transport and transport via pipelines	1.23%
Scientific research and development	1.16%
Public administration and defence; compulsory social security	0.93%
Manufacture of food products	0.89%
Manufacture of other non-metallic mineral products	0.83%
Mining support service activities	0.82%
Publishing activities	0.79%
Rental and leasing activities	0.77%
Programming and broadcasting activities	0.7%
Manufacture of wearing apparel	0.64%

Computer programming, consultancy and related activities	0.6%
Civil engineering	0.59%
Wholesale trade, except of motor vehicles and motorcycles	0.44%
Motion picture, video and television programme production, sound recording and music publishing activities	0.39%
Retail trade, except of motor vehicles and motorcycles	0.37%
Office administrative, office support and other business support activities	0.31%
Food and beverage service activities	0.19%
Manufacture of coke and refined petroleum products	0.15%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

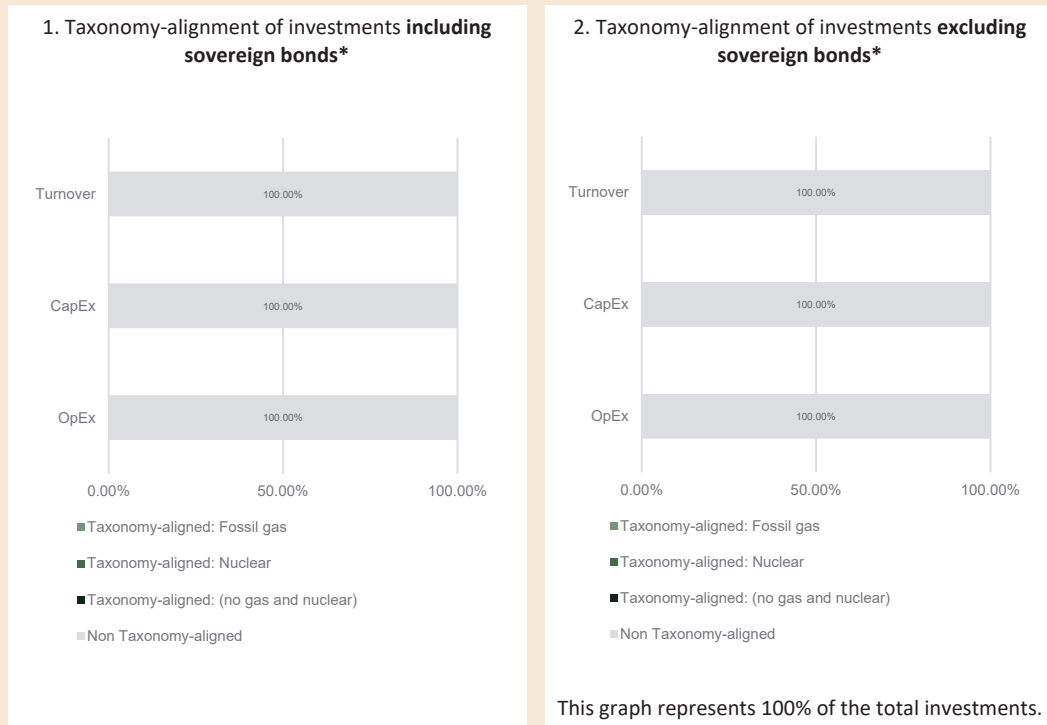

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 49.53% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 30.14% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 1.55% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO CREDIT PLUS (the "Financial Product")

Entity LEI: 2138007ZICBGB7W37J32

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 75.34% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies with:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international standards, the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guideline on bribery. Environmental, social and governance (ESG) sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product and the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.51 / 10	7.4 / 10	96.08 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each reporting date, the benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	7.41 / 10	7.33 / 10	96.97 %

What were the objectives of the sustainable investments that the financial product partially made and how do they contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with the following objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following criteria:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute to one or more SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as sustainable investments, they must satisfy the following criteria:

- the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of the issuer's revenue from a sustainable activity, or
- using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work and economic growth), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operations is less restrictive as such SDGs are better addressed considering the way the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative assessment from the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help companies transition based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science Based Targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by issuers which have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" in the reference framework.
- With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds against a sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds with a positive opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any of the environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments of the Financial Product made had been achieved by not investing in company meeting any of the criteria:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores was below the minimum threshold of the quantitative database from an external provider on a scale ranging from +10 contributing to 'significantly obstructing', unless the issuer has been qualitatively overridden.

- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG score in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors:

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) sustainable investments did not harm significantly any other sustainability objectives or Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies (as described in the SFDR precontractual annex that have been applied bindingly at all times) as well as through the filters based on UN Sustainable Development Goals scoring. Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts. Through direct dialogue with companies on sustainability and governance issues. Through the Financial Product has used its influence as an investor to encourage companies to mitigate risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies to foster sustainably long-term value of the companies in which the Financial Product has investments as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor adverse impacts on those sustainability factors by excluding investee companies which have a SDG score (on a scale from + 10 corresponding to ‘significant contributing impact’ to - 10 corresponding to ‘obstructing impact’), unless the quantitative score has been qualitatively overridden by analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure that the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 58777.977 Scope 2: 7217.556 Scope 3: 367467.188 Scope 1+2: 65995.531 Scope 1+2+3: 432107.063

Social and Governance:

Relevant AXA IM policies	PAI indicator	Unit
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investme
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investme
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unad gender pay ga investee comp

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of members.
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investme

The Financial Product is also taking into account the environmental optional indicator 'recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribe

PAI calculation methodologies have been defined as consistently as possible with c Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to due to challenges with regards to both data availability and reliability. PAI definitions a may still evolve in the future depending on any additional regulatory guidelines, or du instance, data provider's change in methodology, or change in data sets used in orde frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for M Enterprises and the UN Guiding Principles on Business and Human Rigi

During the reference period, the Financial Product did not invest in companies which c to violations of international norms and standards in a material manner. Those stand Society, Labor and Environment. AXA IM excluded any companies that have been assess Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm environmental or social objectives, unless accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 58777.977
Ecosystem protection & Deforestation policy			Scope 2: 7217.556
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 3: 367467.188
Ecosystem protection & Deforestation policy			Scope 1+2: 65995.531
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 432107.063
Ecosystem protection & Deforestation policy			Scope 1+2+3: 424.908
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1364.386
Ecosystem protection & Deforestation policy			Scope 1+2+3: 1364.386

Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	14.41
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 58.13 Energy Production: 66.99
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	8.24
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	38.14
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
AXA WF Euro Credit Total Return M Capitalisation E	Financial service activities, except insurance and pension funding	2.93%	LU

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	44.46%
Electricity, gas, steam and air conditioning supply	12.81%
Real estate activities	10.72%
Insurance, reinsurance and pension funding, except compulsory social security	5.76%
Telecommunications	4.91%
Manufacture of motor vehicles, trailers and semi-trailers	3.3%
Manufacture of coke and refined petroleum products	2.22%
Warehousing and support activities for transportation	2.09%
Activities auxiliary to financial services and insurance activities	1.76%
Manufacture of beverages	1.05%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.05%
Manufacture of computer, electronic and optical products	0.93%
Civil engineering	0.91%
Manufacture of food products	0.76%
Postal and courier activities	0.64%
Public administration and defence; compulsory social security	0.59%
Retail trade, except of motor vehicles and motorcycles	0.54%
Land transport and transport via pipelines	0.42%
Water collection, treatment and supply	0.42%
Computer programming, consultancy and related activities	0.36%
Manufacture of electrical equipment	0.36%
Waste collection, treatment and disposal activities; materials recovery	0.35%
Information service activities	0.33%

Manufacture of fabricated metal products, except machinery and equipment	0.13%
Manufacture of machinery and equipment n.e.c.	0.11%
Wholesale trade, except of motor vehicles and motorcycles	0.05%
Office administrative, office support and other business support activities	0.04%
Services to buildings and landscape activities	0%
Other	-0.2%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

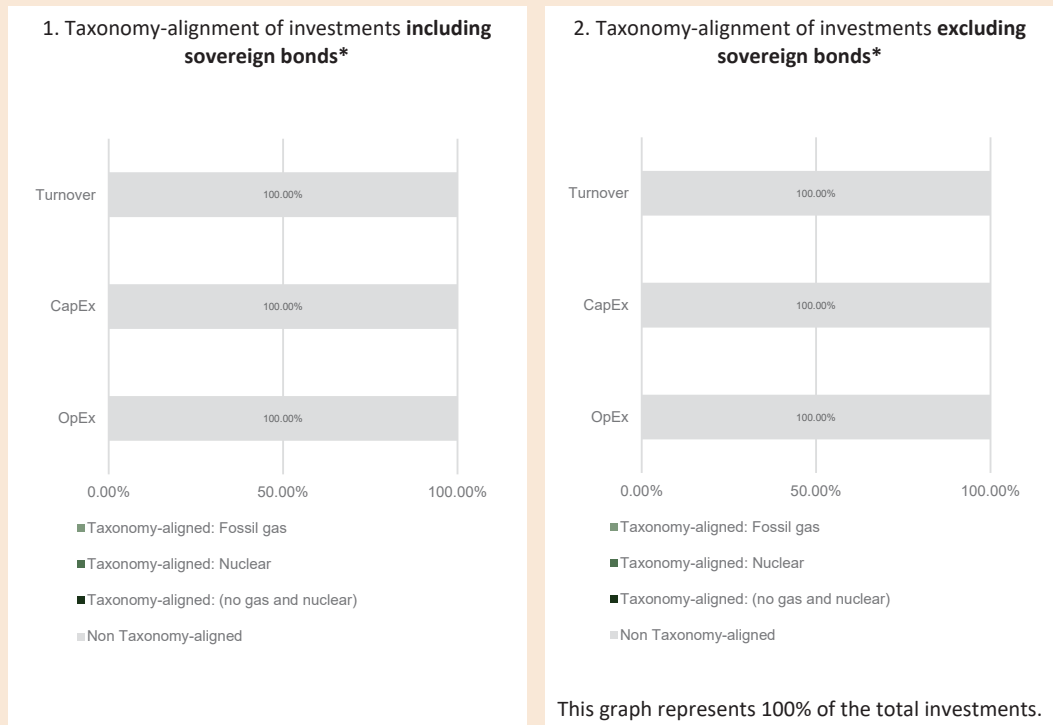

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 35.53% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 39.92% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 3.86% of the Financial Product's Net Asset Value.

The "other" assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (iii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS – EURO CREDIT SHORT DURATION (the "Financial Product")

Entity LEI: 213800R84TOP7WXDMI25

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 74.21% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.51 / 10	7.33 / 10	96.65 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	7.39 / 10	7.33 / 10	96.81 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 95172.805 Scope 2: 11800.98 Scope 3: 833067.25 Scope 1+2: 106973.789 Scope 1+2+3: 931429.125
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 42.687 Scope 1+2+3: 361.394

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.261 Sector NACE D: 3.002 Sector NACE E: 0.889 Sector NACE F: 22.766 Sector NACE G: 0.132 Sector NACE H: 0.917 Sector NACE L: 0.943
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	8.13

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.007
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.294

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	15.7 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.33%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	38.99
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 95172.805
Ecosystem protection & Deforestation policy			Scope 2: 11800.98 Scope 3: 833067.25 Scope 1+2: 106973.789 Scope 1+2+3: 931429.125
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 42.687
Ecosystem protection & Deforestation policy			Scope 1+2+3: 361.394
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1452.467
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	12.71

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	4.34%	FR
SRGIM 3.375% - 05/12/2026 Call	Electricity, gas, steam and air conditioning supply	1.29%	IT
AXA WF Euro Credit Total Return M Capitalisation E	Financial service activities, except insurance and pension funding	1.24%	LU

BAC 1.949% Var - 27/10/2026 Call	Financial service activities, except insurance and pension funding	0.88%	US

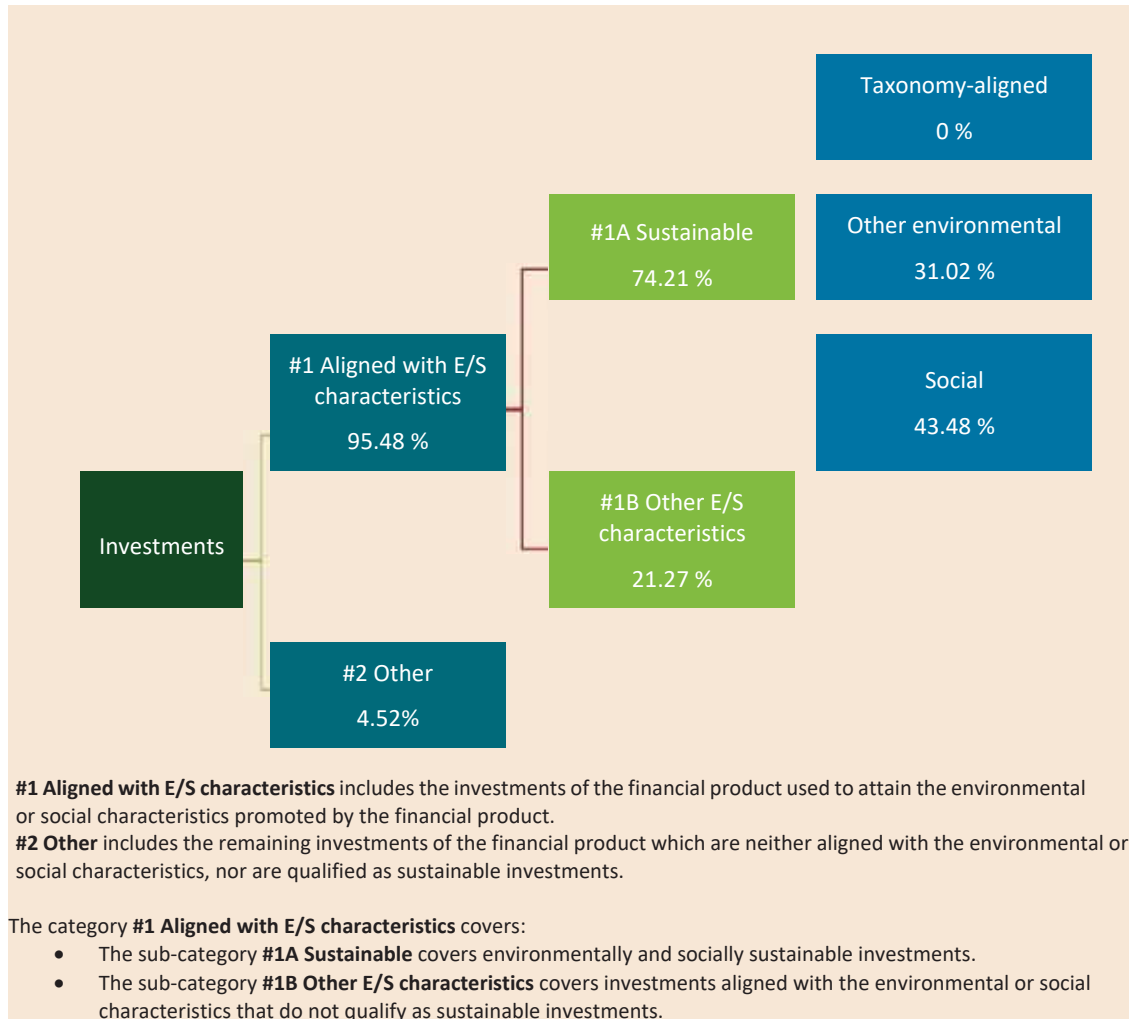

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	50.97%
Electricity, gas, steam and air conditioning supply	10.82%
Real estate activities	7.36%
Manufacture of motor vehicles, trailers and semi-trailers	6.08%
Telecommunications	3.89%
Activities auxiliary to financial services and insurance activities	3.68%
Insurance, reinsurance and pension funding, except compulsory social security	3.09%
Manufacture of coke and refined petroleum products	2.46%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.01%
Warehousing and support activities for transportation	1.31%
Other	1.13%
Advertising and market research	0.78%
Information service activities	0.66%
Land transport and transport via pipelines	0.6%
Manufacture of electrical equipment	0.6%
Manufacture of beverages	0.51%
Other manufacturing	0.47%
Civil engineering	0.39%
Air transport	0.35%
Manufacture of other transport equipment	0.34%
Office administrative, office support and other business support activities	0.32%
Manufacture of computer, electronic and optical products	0.31%
Manufacture of wearing apparel	0.31%
Retail trade, except of motor vehicles and motorcycles	0.28%
Manufacture of other non-metallic mineral products	0.17%
Water collection, treatment and supply	0.17%
Public administration and defence; compulsory social security	0.17%
Manufacture of chemicals and chemical products	0.16%
Manufacture of paper and paper products	0.15%

Wholesale trade, except of motor vehicles and motorcycles	0.13%
Manufacture of tobacco products	0.11%
Scientific research and development	0.1%
Food and beverage service activities	0.08%
Waste collection, treatment and disposal activities; materials recovery	0.05%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 31.02% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 43.48% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 4.52% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO Entity LEI: 213800FPDKN4GVHVJI39
CREDIT TOTAL RETURN (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 60.95% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	7.39 / 10	6.94 / 10	95.09 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	7.25 / 10	6.64 / 10	96.09 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 35602.535 Scope 2: 3845.764 Scope 3: 310119.313 Scope 1+2: 39448.301 Scope 1+2+3: 348489.625
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 45.721 Scope 1+2+3: 427.507
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 1681.864
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	9.66

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.703 Sector NACE D: 3.125 Sector NACE F: 40.33 Sector NACE G: 0.141 Sector NACE H: 0.139 Sector NACE L: 0.569
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	5.04

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	N/A
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.113

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	9.18 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.07%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	38.62
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 35602.535
Ecosystem protection & Deforestation policy			Scope 2: 3845.764
			Scope 3: 310119.313
			Scope 1+2: 39448.301
			Scope 1+2+3: 348489.625
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 45.721
Ecosystem protection & Deforestation policy			Scope 1+2+3: 427.507
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1681.864
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	9.66
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 52.35 Energy Production: 72.68
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	5.04
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	38.62
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
BKO 2.5% - 13/03/2025	Public administration and defence; compulsory social security	4.23%	DE
PF 51807 EUR Settlement Acc at SSX	Other	4%	N/A
EDF 4.625% - 25/01/2043 Call	Electricity, gas, steam and air conditioning supply	1.61%	FR
DEVOBA 7% Var - 15/12/2027 Perp	Financial service activities, except insurance and pension funding	1.17%	NL
ULFP 7.25% Var - 03/07/2028 Perp	Real estate activities	1%	FR
REPSM 4.5% Var - 25/03/2075 Call	Manufacture of coke and refined petroleum products	0.95%	NL
ENELIM 4.5% - 20/02/2043 Call	Electricity, gas, steam and air conditioning supply	0.95%	NL
AXA Tresor Court Terme Capitalisation EUR	Financial service activities, except insurance and pension funding	0.91%	FR
HCOB 6.25% - 18/11/2024	Financial service activities, except insurance and pension funding	0.87%	DE
RBIAV 7.375% Var - 20/12/2032 Call	Financial service activities, except insurance and pension funding	0.85%	AT
EDF 4.375% - 12/10/2029 Call	Electricity, gas, steam and air conditioning supply	0.85%	FR
UCGIM 5.375% Var - 03/06/2025 Perp	Financial service activities, except insurance and pension funding	0.8%	IT
BKTSM 7.375% Var - 15/08/2028 Perp	Financial service activities, except insurance and pension funding	0.79%	ES
PF 51807 EUR Initial Margin Acc at GSI	Other	0.76%	N/A
ATH 0.832% - 08/01/2027	Insurance, reinsurance and pension funding, except compulsory social security	0.73%	US

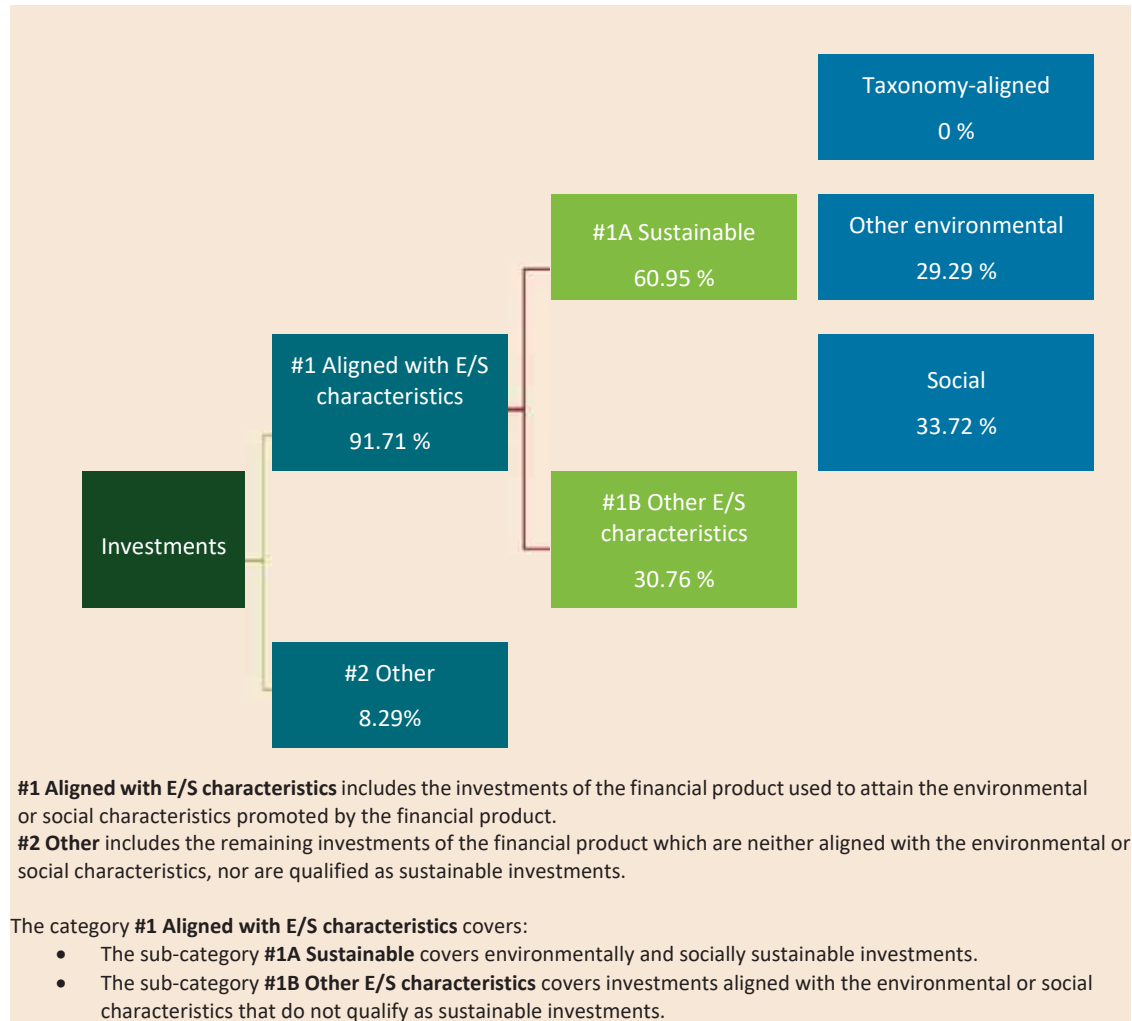

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	44.95%
Real estate activities	9.42%
Electricity, gas, steam and air conditioning supply	9.41%
Insurance, reinsurance and pension funding, except compulsory social security	8.35%
Public administration and defence; compulsory social security	5.22%
Other	3.83%
Warehousing and support activities for transportation	2.89%
Manufacture of coke and refined petroleum products	2.47%
Telecommunications	2.23%
Manufacture of motor vehicles, trailers and semi-trailers	1.92%
Manufacture of chemicals and chemical products	1.18%
Activities auxiliary to financial services and insurance activities	1.07%
Civil engineering	0.81%
Rental and leasing activities	0.59%
Manufacture of other non-metallic mineral products	0.52%
Water transport	0.43%
Scientific research and development	0.39%
Retail trade, except of motor vehicles and motorcycles	0.36%
Office administrative, office support and other business support activities	0.36%
Manufacture of rubber and plastic products	0.35%
Manufacture of leather and related products	0.34%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.31%
Wholesale trade, except of motor vehicles and motorcycles	0.25%
Waste collection, treatment and disposal activities; materials recovery	0.25%
Other manufacturing	0.25%
Services to buildings and landscape activities	0.24%
Manufacture of computer, electronic and optical products	0.22%
Manufacture of electrical equipment	0.2%

Manufacture of other transport equipment	0.19%
Human health activities	0.18%
Manufacture of food products	0.17%
Security and investigation activities	0.16%
Manufacture of wearing apparel	0.14%
Manufacture of paper and paper products	0.11%
Land transport and transport via pipelines	0.08%
Manufacture of beverages	0.06%
Food and beverage service activities	0.05%
Crop and animal production, hunting and related service activities	0.05%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 29.29% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 33.72% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 8.29% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO Entity LEI: 213800YPBGVOHV6NK89
 GOVERNMENT BONDS (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 12.67% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6.18 / 10	6.16 / 10	99.89 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	6.09 / 10	6.05 / 10	99.82 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact ' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 1172.104 Scope 2: 131.955 Scope 3: 18990.666 Scope 1+2: 1304.058 Scope 1+2+3: 19794.863
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 12.891 Scope 1+2+3: 19.712
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1928.076
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	0.49

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	N/A
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.009

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	0.87 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.8%
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	40.28
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 1172.104
Ecosystem protection & Deforestation policy			Scope 2: 131.955 Scope 3: 18990.666 Scope 1+2: 1304.058 Scope 1+2+3: 19794.863
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 12.891
Ecosystem protection & Deforestation policy			Scope 1+2+3: 19.712
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1928.076
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	0.49
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	0.24
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	5.17%	FR
SPGB 4.65% - 30/07/2025	Public administration and defence; compulsory social security	2.34%	ES
FRTR 1.75% - 25/11/2024	Public administration and defence; compulsory social security	2.28%	FR
BTPS 1.35% - 01/04/2030	Public administration and defence; compulsory social security	1.97%	IT

FRTR 0.25% - 25/11/2026	Public administration and defence; compulsory social security	1.69%	FR
FRTR 0.5% - 25/05/2026	Public administration and defence; compulsory social security	1.63%	FR
DBR 0 - 15/08/2030	Public administration and defence; compulsory social security	1.61%	DE
BTPS 4.5% - 01/03/2026	Public administration and defence; compulsory social security	1.61%	IT
FRTR 1.75% - 25/06/2039	Public administration and defence; compulsory social security	1.49%	FR
FRTR 2.5% - 25/05/2030	Public administration and defence; compulsory social security	1.34%	FR
BTPS 3.35% - 01/03/2035	Public administration and defence; compulsory social security	1.33%	IT
SPGB 0.8% - 30/07/2027	Public administration and defence; compulsory social security	1.33%	ES
FRTR 4.75% - 25/04/2035	Public administration and defence; compulsory social security	1.33%	FR
SPGB 2.8% - 31/05/2026	Public administration and defence; compulsory social security	1.27%	ES
BTPS 3.4% - 01/04/2028	Public administration and defence; compulsory social security	1.27%	IT

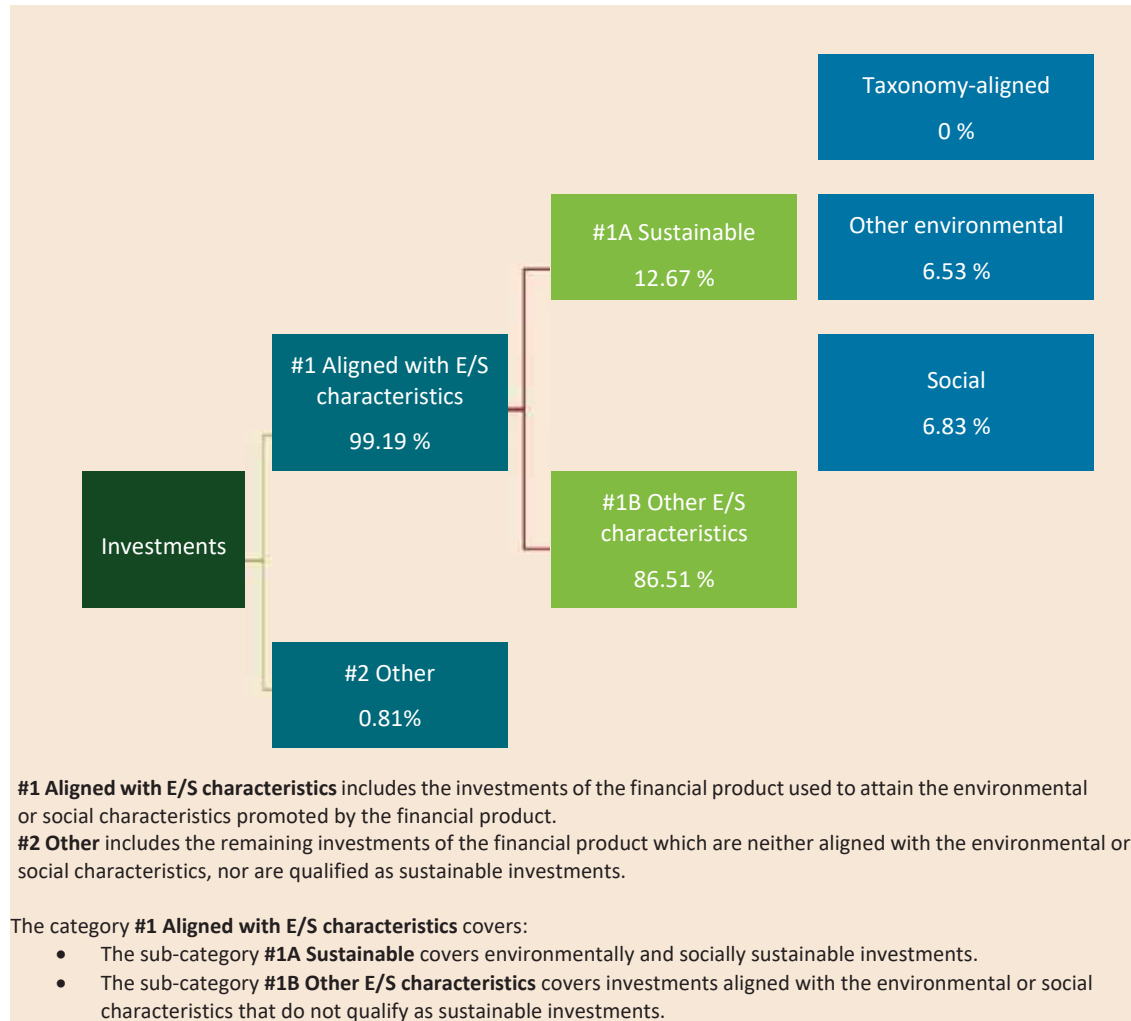

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	87.92%
Financial service activities, except insurance and pension funding	10.73%
Activities of extraterritorial organisations and bodies	0.72%
Other	0.62%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 6.53% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 6.83% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.81% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

● **How did this financial product perform compared to the reference benchmark?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO INFLATION BONDS (the "Financial Product")

Entity LEI: 2138002DL7V1I0568C73

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 2.02% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	5.91 / 10	6 / 10	99.99 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	5.85 / 10	5.82 / 10	99.87 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly

contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact ' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.001

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	0.13 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.62%
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	40.2
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 45.538
Ecosystem protection & Deforestation policy			Scope 2: 6.197 Scope 3: 698.82 Scope 1+2: 51.735

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

			Scope 1+2+3: 733
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 14.244 Scope 1+2+3: 2.106

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
FRTR 1.85% - 25/07/2027 CPI	Public administration and defence; compulsory social security	6%	FR
DBRI 0.5% - 15/04/2030 CPI	Public administration and defence; compulsory social security	5.07%	DE
FRTR 0.7% - 25/07/2030 CPI	Public administration and defence; compulsory social security	4.03%	FR
SPGBEI 0.65% - 30/11/2027 CPI	Public administration and defence; compulsory social security	3.99%	ES
SPGBEI 1% - 30/11/2030 CPI	Public administration and defence; compulsory social security	3.8%	ES
SPGBEI 0.7% - 30/11/2033 CPI	Public administration and defence; compulsory social security	3.61%	ES
FRTR 3.15% - 25/07/2032 CPI	Public administration and defence; compulsory social security	3.44%	FR

BTPS 1.3% - 15/05/2028 CPI	Public administration and defence; compulsory social security	3.41%	IT
BTPS 2.55% - 15/09/2041 CPI	Public administration and defence; compulsory social security	3.34%	IT
FRTR 0.1% - 01/03/2028 CPI	Public administration and defence; compulsory social security	3.3%	FR
BTPS 2.35% - 15/09/2035 CPI	Public administration and defence; compulsory social security	3.29%	IT
DBRI 0.1% - 15/04/2046 CPI	Public administration and defence; compulsory social security	3.17%	DE
BTPS 3.1% - 15/09/2026 CPI	Public administration and defence; compulsory social security	3.15%	IT
FRTR 1.8% - 25/07/2040 CPI	Public administration and defence; compulsory social security	3.14%	FR
FRTR 0.1% - 01/03/2026 CPI	Public administration and defence; compulsory social security	3.02%	FR

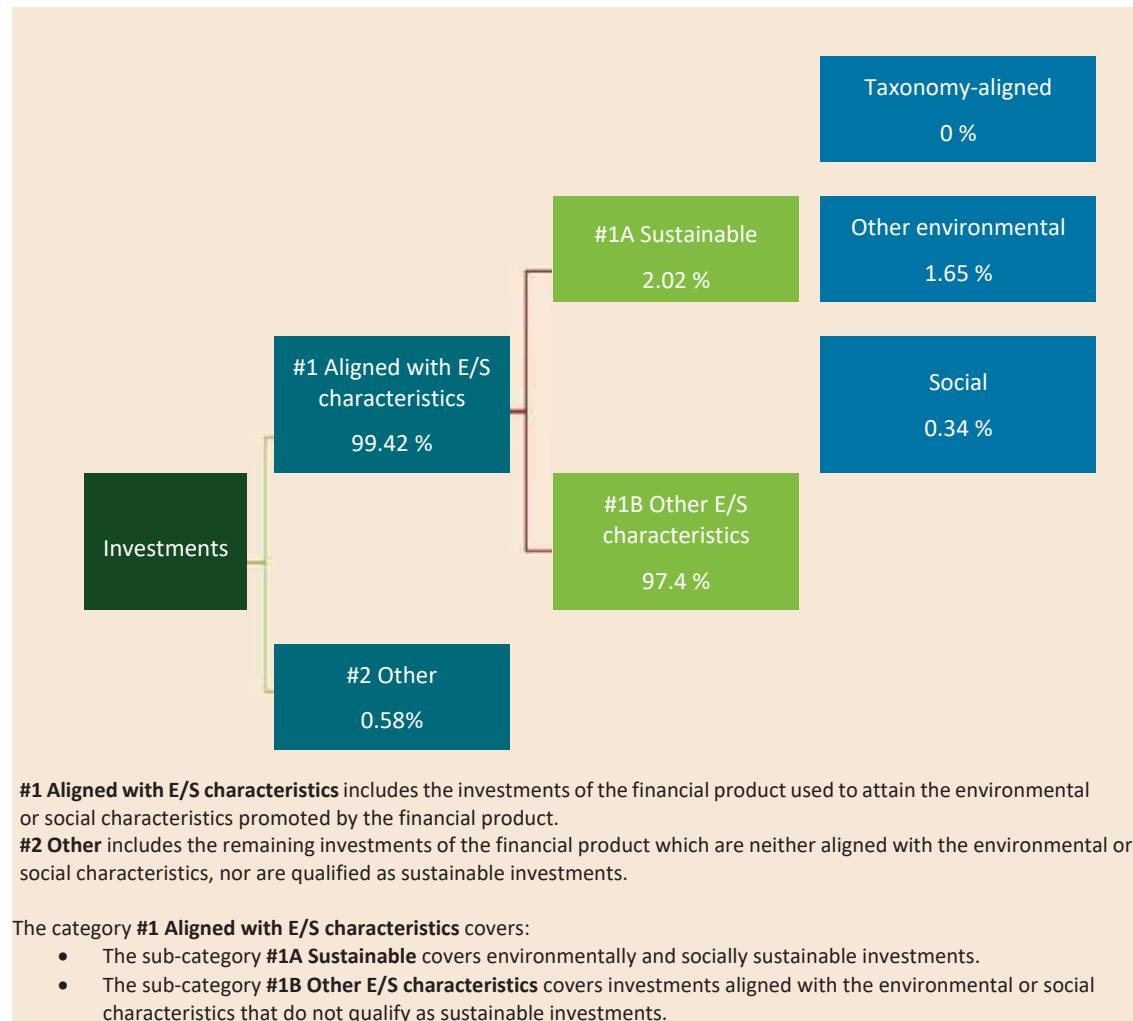

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	98.96%
Other	0.57%
Financial service activities, except insurance and pension funding	0.47%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

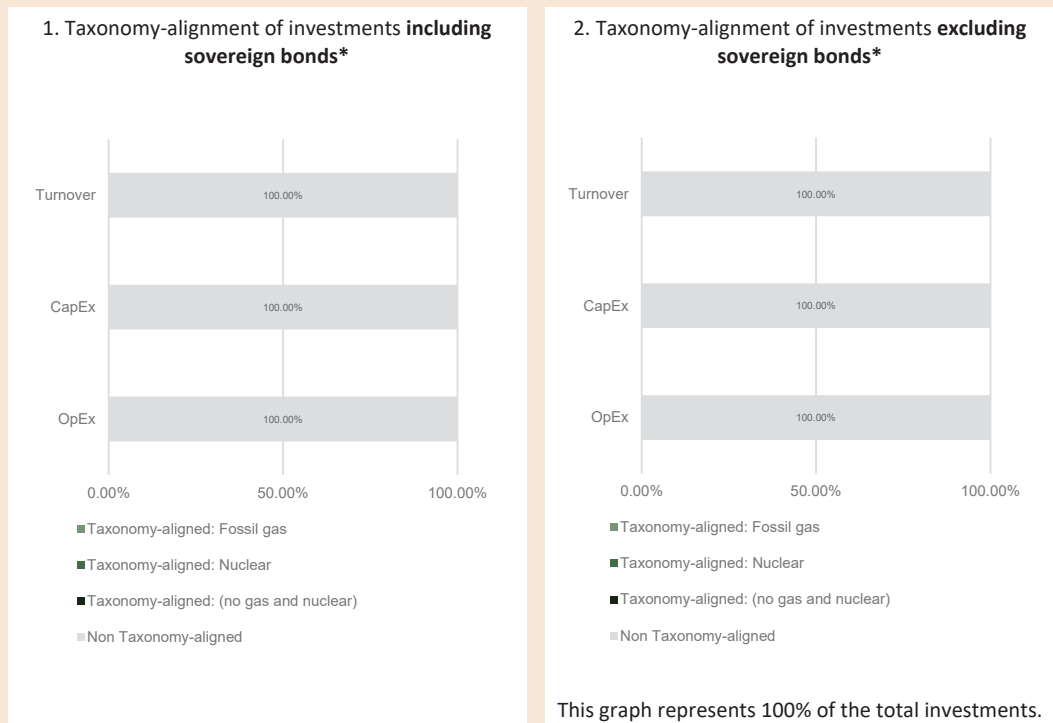

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 1.65% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 0.34% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.58% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO SELECTION (the "Financial Product")

Entity LEI: 2138006UOXOICOH1HT33

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 79.41% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their E Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	83.71 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	150.66 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Water Intensity	452.5 Thousands of cubic meters for corporates	1721.95 Thousands of cubic meters for corporates	100 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	95.56 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	240.09 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Water intensity	2022	3277.79 Thousands of cubic meters for corporates	14236.19 Thousands of cubic meters for corporates	100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 344.972 Scope 2: 302.794 Scope 3: 8465.995 Scope 1+2: 647.766 Scope 1+2+3: 9049.206
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 10.526 Scope 1+2+3: 133.839
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 799.01
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	4.06
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 49.64 Energy Production: 42.91

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.136 Sector NACE D: 1.292 Sector NACE G: 0.06 Sector NACE L: 0.001
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	3.13
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.001
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.341

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	24.88 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	11.11%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	39.31
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 344.972
Ecosystem protection & Deforestation policy			Scope 2: 302.794
			Scope 3: 8465.995
			Scope 1+2: 647.766
			Scope 1+2+3: 9049.206
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 10.526
Ecosystem protection & Deforestation policy			Scope 1+2+3: 133.839
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 799.01
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	4.06
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 49.64 Energy Production: 42.91
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	3.13

CAPGEMINI SE XPAR EUR	Computer programming, consultancy and related activities	2.99%	FR

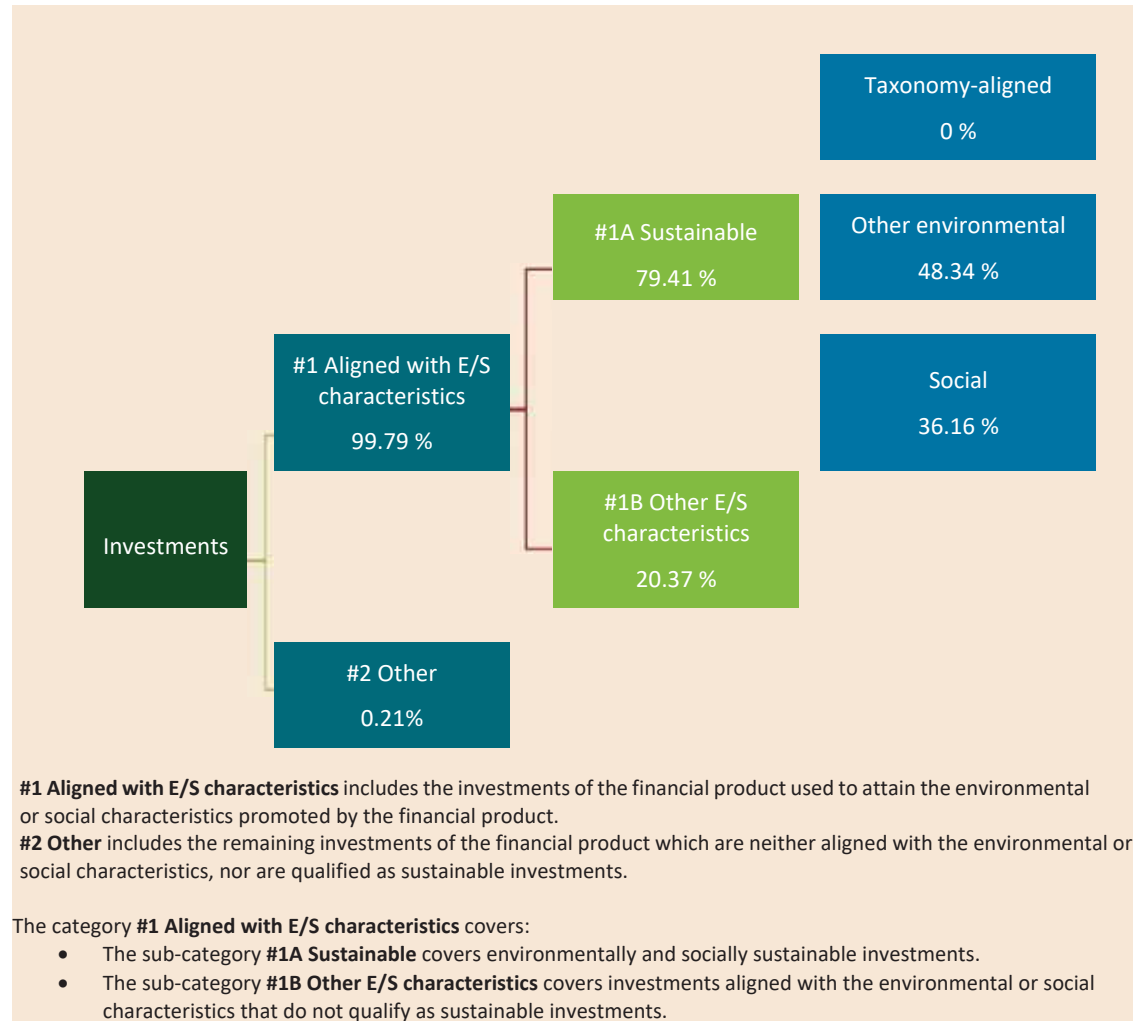

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of machinery and equipment n.e.c.	11.26%
Manufacture of chemicals and chemical products	11.18%
Manufacture of wearing apparel	9.66%
Manufacture of leather and related products	6.55%
Publishing activities	5.92%
Manufacture of computer, electronic and optical products	5.48%
Manufacture of motor vehicles, trailers and semi-trailers	4.71%
Electricity, gas, steam and air conditioning supply	4.57%
Motion picture, video and television programme production, sound recording and music publishing activities	4.14%
Manufacture of beverages	4.02%
Computer programming, consultancy and related activities	3.89%
Other manufacturing	3.29%
Wholesale trade, except of motor vehicles and motorcycles	3.29%
Manufacture of electrical equipment	3.07%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3%
Scientific research and development	2.97%
Wholesale and retail trade and repair of motor vehicles and motorcycles	2.66%
Manufacture of coke and refined petroleum products	2.11%
Manufacture of food products	1.95%
Civil engineering	1.59%
Activities auxiliary to financial services and insurance activities	1.41%
Information service activities	1.29%
Rental and leasing activities	1.1%
Real estate activities	0.66%
Other	0.22%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 48.34% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 36.16% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.21% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO SHORT DURATION BONDS (the "Financial Product")

Entity LEI: 213800ZUBY6R8JABBZ11

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53.89% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.18 / 10	6.81 / 10	98.2 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	7.09 / 10	6.7 / 10	98.5 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact ' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 10146.783 Scope 2: 1024.223 Scope 3: 40037.746 Scope 1+2: 11171.006 Scope 1+2+3: 51176.578
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 113.135 Scope 1+2+3: 257.392

Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	4.14
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.026

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.644
-------------------------------------	--	--	-------

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	6.15 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.51%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	39.4
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 10146.783
Ecosystem protection & Deforestation policy			Scope 2: 1024.223 Scope 3: 40037.746 Scope 1+2: 11171.006 Scope 1+2+3: 51176.578
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 113.135
Ecosystem protection & Deforestation policy			Scope 1+2+3: 257.392
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1152.331

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	39.4
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
BTPS 1.85% - 01/07/2025	Public administration and defence; compulsory social security	5.95%	IT
SPGB 0.8% - 30/07/2027	Public administration and defence; compulsory social security	3.28%	ES
SPGB 1.6% - 30/04/2025	Public administration and defence; compulsory social security	3.24%	ES
BTPS 0.85% - 15/01/2027	Public administration and defence; compulsory social security	2.8%	IT
PF 10677 EUR Settlement Acc at SSX	Other	2.47%	N/A
RAGB 2.9% - 20/02/2033	Public administration and defence; compulsory social security	1.81%	AT
UNEDIC 0.1% - 25/11/2026	Insurance, reinsurance and pension funding, except compulsory social security	1.66%	FR
BNG 0.125% - 11/04/2026	Financial service activities, except insurance and pension funding	1.41%	NL
BTPS 4.5% - 01/03/2024	Public administration and defence; compulsory social security	1.29%	IT
AGFRNC 2.25% - 28/05/2026	Financial service activities, except insurance and pension funding	1.25%	FR
BGB 1% - 22/06/2026	Public administration and defence; compulsory social security	1.21%	BE
PHILIP 0.25% - 28/04/2025	Public administration and defence; compulsory social security	1.19%	PH
ADIFAL 3.5% - 27/05/2024	Warehousing and support activities for transportation	1.16%	ES
AXASA 3.941% Var - 07/11/2024 Perp	Insurance, reinsurance and pension funding, except compulsory social security	1.11%	FR
BGB 1.25% - 22/04/2033	Public administration and defence; compulsory social security	1.07%	BE

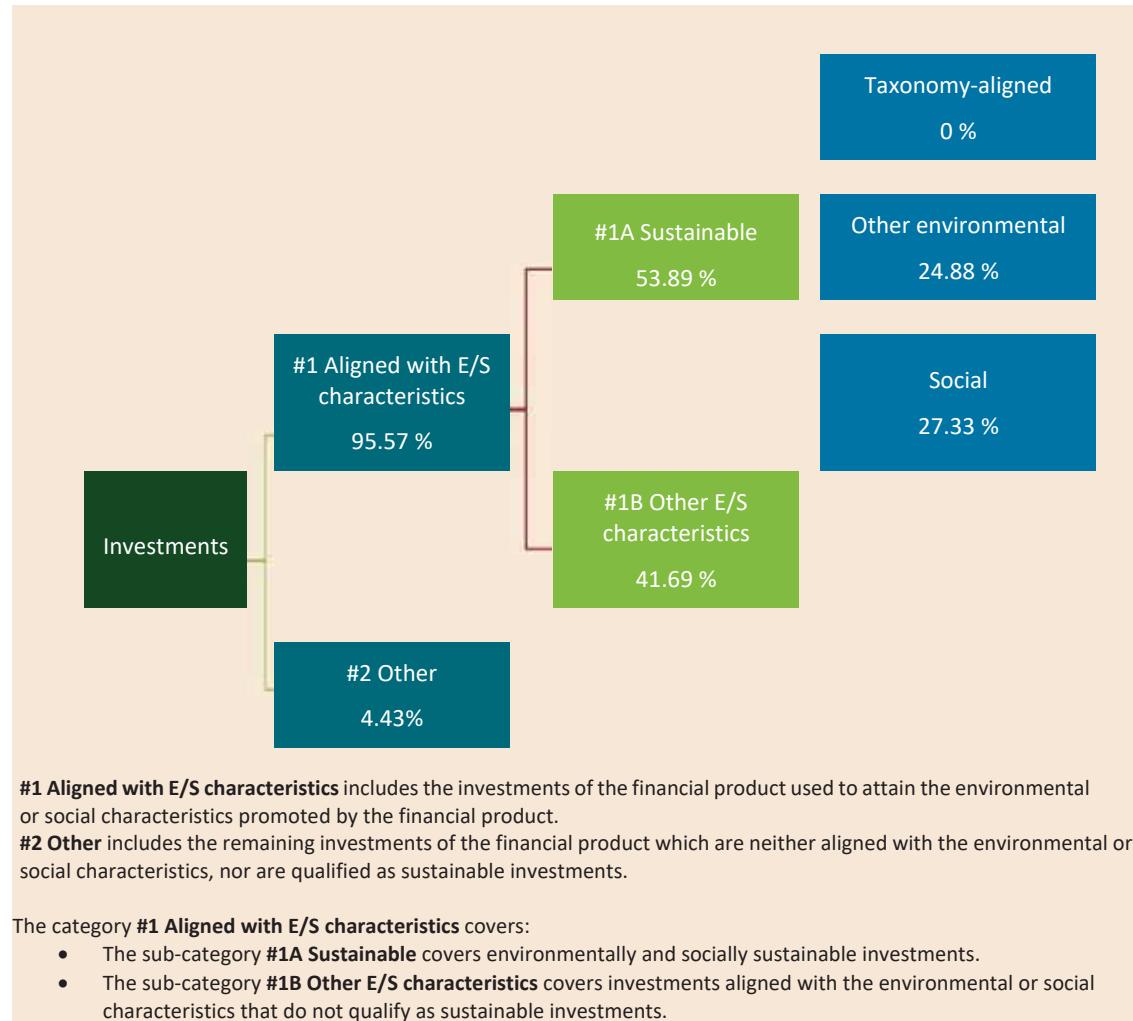

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	31.01%
Financial service activities, except insurance and pension funding	29.91%
Real estate activities	5.22%
Insurance, reinsurance and pension funding, except compulsory social security	5.14%
Electricity, gas, steam and air conditioning supply	4.39%
Manufacture of motor vehicles, trailers and semi-trailers	3.04%
Warehousing and support activities for transportation	2.97%
Other	2.69%
Telecommunications	2.46%
Manufacture of coke and refined petroleum products	1.63%
Water collection, treatment and supply	1.29%
Manufacture of computer, electronic and optical products	1.25%
Activities of extraterritorial organisations and bodies	1.15%
Manufacture of beverages	1.06%
Manufacture of chemicals and chemical products	1.04%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.93%
Manufacture of paper and paper products	0.62%
Manufacture of other non-metallic mineral products	0.61%
Retail trade, except of motor vehicles and motorcycles	0.61%
Scientific research and development	0.59%
Advertising and market research	0.48%
Manufacture of wearing apparel	0.38%
Manufacture of fabricated metal products, except machinery and equipment	0.37%
Information service activities	0.25%
Manufacture of machinery and equipment n.e.c.	0.24%
Manufacture of electrical equipment	0.2%
Rental and leasing activities	0.18%
Manufacture of leather and related products	0.15%
Publishing activities	0.14%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?**

Yes

In fossil gas In nuclear energy

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 24.88% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 27.33% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 4.43% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO STRATEGIC BONDS (the "Financial Product")

Entity LEI: 2138006GTA831JB41E69

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 40.74% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.96 / 10	6.59 / 10	97.68 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	6.89 / 10	6.52 / 10	98.84 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 7760.873 Scope 2: 752.336 Scope 3: 63012.828 Scope 1+2: 8513.208 Scope 1+2+3: 71496.281

Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	1.61

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.001
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.474

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	2.53 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14.89%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	40.28
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 7760.873
Ecosystem protection & Deforestation policy			Scope 2: 752.336
			Scope 3: 63012.828
			Scope 1+2: 8513.208
			Scope 1+2+3: 71496.281
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 100.291

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
RAGB 2.9% - 20/02/2033	Public administration and defence; compulsory social security	6.9%	AT
BTPS 3.5% - 01/03/2030	Public administration and defence; compulsory social security	5.96%	IT
FRTR 0 - 25/02/2024	Public administration and defence; compulsory social security	4.28%	FR
FRTR 0 - 25/02/2025	Public administration and defence; compulsory social security	3.9%	FR
PF 10679 EUR Settlement Acc at SSX	Other	2.87%	N/A
BTPS 3.4% - 28/03/2025	Public administration and defence; compulsory social security	2.05%	IT
FRTR 0.1% - 01/03/2026 CPI	Public administration and defence; compulsory social security	1.94%	FR
AKEFP 2.75% Var - 17/06/2024 Perp	Manufacture of chemicals and chemical products	1.67%	FR
ROMANI 2.375% - 19/04/2027	Public administration and defence; compulsory social security	1.51%	RO
RAGB 0 - 15/07/2024	Public administration and defence; compulsory social security	1.33%	AT
BCPPL 1.125% Var - 12/02/2027 Call	Financial service activities, except insurance and pension funding	1.28%	PT
CABKSM 1.125% - 12/11/2026	Financial service activities, except insurance and pension funding	1.25%	ES
AXASA 3.941% Var - 07/11/2024 Perp	Insurance, reinsurance and pension funding, except compulsory social security	1.22%	FR
Q 0 - 29/10/2030	Public administration and defence; compulsory social security	1.09%	CA
REPSM 4.5% Var - 25/03/2075 Call	Manufacture of coke and refined petroleum products	1.09%	NL

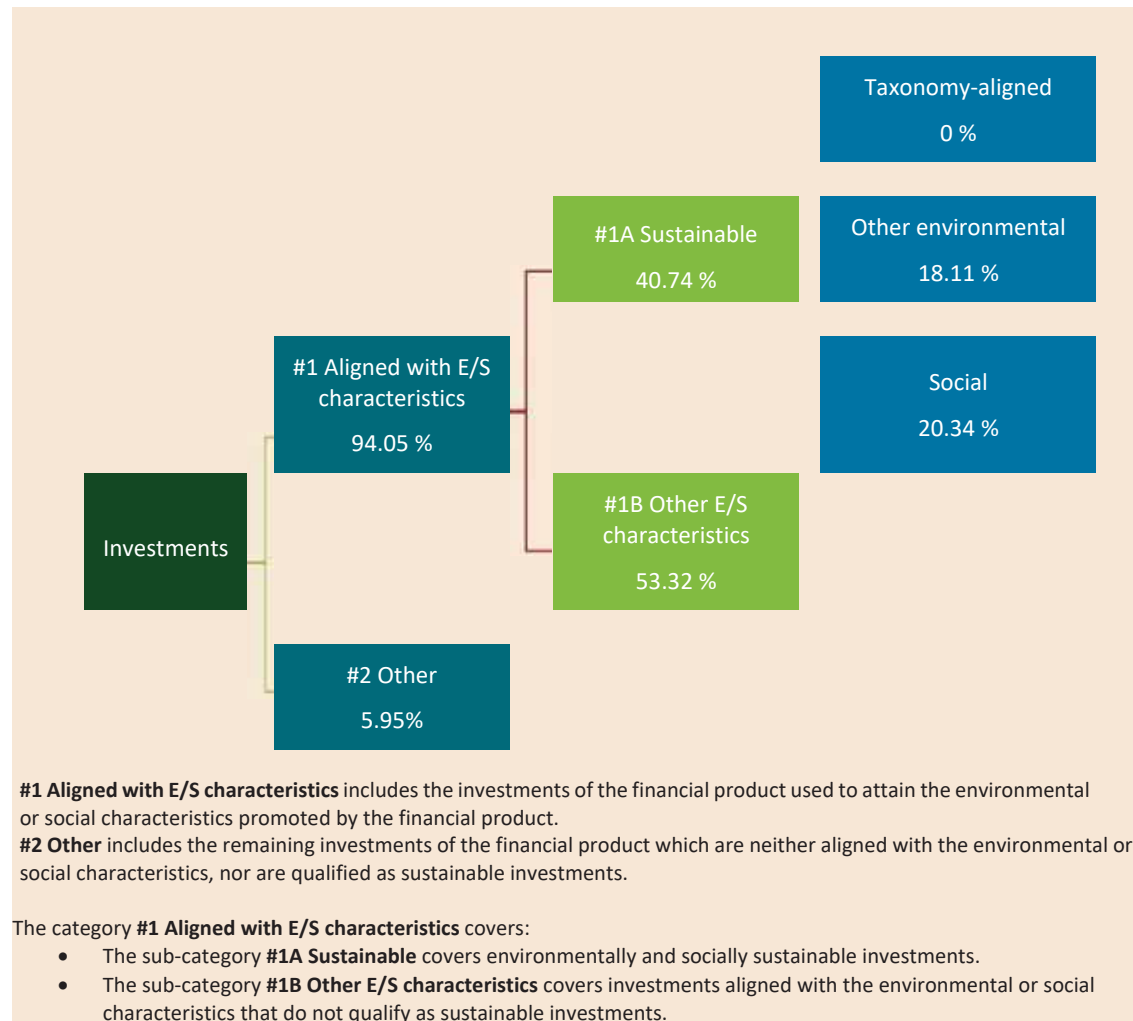

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	37.28%
Financial service activities, except insurance and pension funding	31.18%
Insurance, reinsurance and pension funding, except compulsory social security	5.33%
Real estate activities	4.49%
Manufacture of motor vehicles, trailers and semi-trailers	4.13%
Other	3.79%
Electricity, gas, steam and air conditioning supply	3.24%
Warehousing and support activities for transportation	2.18%
Manufacture of coke and refined petroleum products	2.06%
Manufacture of chemicals and chemical products	1.67%
Telecommunications	1.37%
Scientific research and development	0.85%
Water collection, treatment and supply	0.74%
Publishing activities	0.68%
Activities of extraterritorial organisations and bodies	0.51%
Manufacture of other non-metallic mineral products	0.13%
Manufacture of electrical equipment	0.13%
Waste collection, treatment and disposal activities; materials recovery	0.12%
Manufacture of paper and paper products	0.1%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 18.11% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 20.34% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 5.95% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO SUSTAINABLE BONDS (the "Financial Product") Entity LEI: 213800Q7PQM0GDP47F43

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 69.83% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Women on board
- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Women on board and Carbon Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Women on board indicator and iii) 70% for the Carbon Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Women on board	39.25 % of women on board	37.4 % of women on board	95.38 %
Carbon Intensity	78.9 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	105.14 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	96.73 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Women on board	2022	37.76 % of women on board	36.59 % of women on board	95.38 %
Carbon Intensity	2022	128 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	147.38 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	97.99 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. **Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:**

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives. It has considered climate mitigation; climate adaptation objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
BTPS 0 - 15/12/2024	Public administration and defence; compulsory social security	3.9%	IT
DBR 0 - 15/08/2050	Public administration and defence; compulsory social security	2.38%	DE
Portfolio 70935 EUR SET SSX	Other	2.17%	N/A
BGB 1.25% - 22/04/2033	Public administration and defence; compulsory social security	2.12%	BE
FRTR 1.75% - 25/06/2039	Public administration and defence; compulsory social security	1.95%	FR
AXA WF ACT Social Bonds M Capitalisation EUR	Other	1.77%	LU
RAGB 2.9% - 20/02/2033	Public administration and defence; compulsory social security	1.72%	AT
FRTR 0.5% - 25/06/2044	Public administration and defence; compulsory social security	1.5%	FR
SPGB 1.3% - 31/10/2026	Public administration and defence; compulsory social security	1.41%	ES

BTPS 0.95% - 15/09/2027	Public administration and defence; compulsory social security	1.34%	IT
BTPS 4% - 30/10/2031	Public administration and defence; compulsory social security	1.29%	IT
SPGB 1.4% - 30/04/2028	Public administration and defence; compulsory social security	1.18%	ES
DBR 0 - 15/08/2030	Public administration and defence; compulsory social security	1.17%	DE
SPGB 1.25% - 31/10/2030	Public administration and defence; compulsory social security	1.1%	ES
SPGB 4.2% - 31/01/2037	Public administration and defence; compulsory social security	0.98%	ES

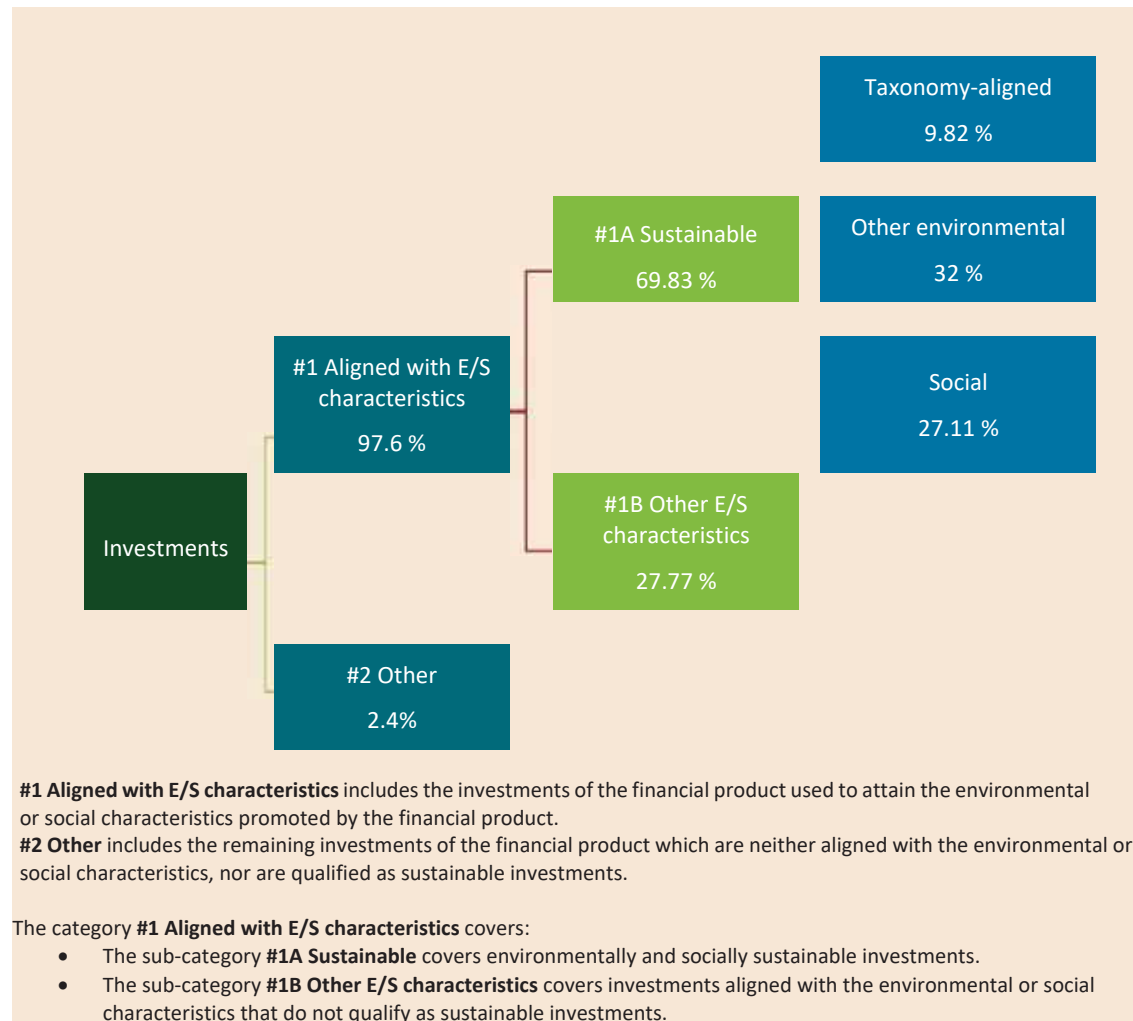

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	47.99%
Financial service activities, except insurance and pension funding	20.98%
Insurance, reinsurance and pension funding, except compulsory social security	5.45%
Electricity, gas, steam and air conditioning supply	4.58%
Other	4.06%
Telecommunications	3.14%
Real estate activities	2.83%
Activities of extraterritorial organisations and bodies	2.09%
Manufacture of motor vehicles, trailers and semi-trailers	1.52%
Warehousing and support activities for transportation	1.35%
Manufacture of beverages	1.24%
Land transport and transport via pipelines	0.95%
Manufacture of chemicals and chemical products	0.89%
Manufacture of paper and paper products	0.53%
Manufacture of wearing apparel	0.53%
Other manufacturing	0.47%
Manufacture of computer, electronic and optical products	0.4%
Manufacture of food products	0.35%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.31%
Manufacture of leather and related products	0.18%
Retail trade, except of motor vehicles and motorcycles	0.16%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It invested in activities following the climate mitigation; climate adaptation objectives of the EU Taxonomy.

The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was aligned to EU Taxonomy at 9.82% of its NAV for the period of reference, compared to 11.83% for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 32% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 27.11% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 2.4% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO SUSTAINABLE CREDIT (the "Financial Product") Entity LEI: 2138006TWRUUKT9NE169

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 79.85% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Women on board
- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Women on board and Carbon Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Women on board indicator and iii) 70% for the Carbon Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Women on board	39.33 % of women on board	38.82 % of women on board	96.25 %
Carbon Intensity	112.97 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	136.56 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.29 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Women on board	2022	39.42 % of women on board	38.28 % of women on board	95.42 %
Carbon Intensity	2022	139.23 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	191.01 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	93.71 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. **Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:**

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 18334.791
Ecosystem protection & Deforestation policy			Scope 2: 4634.667 Scope 3: 172220.125 Scope 1+2: 22969.457 Scope 1+2+3: 194445.016
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 45.621
Ecosystem protection & Deforestation policy			Scope 1+2+3: 336.969
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1244.784
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	13.23
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 59.61 Energy Production: 63.85
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	9.74
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	39.01
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
AXA Tresor Court Terme Capitalisation EUR	Financial service activities, except insurance and pension funding	4.99%	FR

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	38.7%
Electricity, gas, steam and air conditioning supply	15.27%
Insurance, reinsurance and pension funding, except compulsory social security	6.96%
Real estate activities	5.23%
Manufacture of motor vehicles, trailers and semi-trailers	4.9%
Telecommunications	4.73%
Activities auxiliary to financial services and insurance activities	3.49%
Manufacture of beverages	3.22%
Warehousing and support activities for transportation	2.82%
Manufacture of food products	2.31%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.84%
Manufacture of paper and paper products	1.42%
Publishing activities	1.25%
Manufacture of chemicals and chemical products	1.16%
Retail trade, except of motor vehicles and motorcycles	0.92%
Other manufacturing	0.85%
Manufacture of rubber and plastic products	0.73%
Manufacture of machinery and equipment n.e.c.	0.63%
Computer programming, consultancy and related activities	0.52%
Manufacture of coke and refined petroleum products	0.52%
Rental and leasing activities	0.49%
Manufacture of wearing apparel	0.46%
Manufacture of other transport equipment	0.44%
Office administrative, office support and other business support activities	0.3%
Information service activities	0.29%
Manufacture of computer, electronic and optical products	0.29%
Civil engineering	0.24%
Other	0.04%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
 In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 48.31% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 30.44% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 2.5% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

● **How did this financial product perform compared to the reference benchmark?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EUROPE EX- Entity LEI: 213800RFUQI3RGAM6H69
UK MICROCAP (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 26.76% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	89.43 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	158.04 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	91.26 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	113.26 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	159.53 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	82.89 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the

- OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 3146.963 Scope 2: 1646.148 Scope 3: 47486.859 Scope 1+2: 4793.111 Scope 1+2+3: 51894.625

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD	% of investments	N/A

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

	Guidelines for multinational enterprises		
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	36.35 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	13%
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	36.49
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Principal adverse impacts are the most significant negative impacts of investment

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy		Metric tonnes	

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Ecosystem protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)		Scope 1: 3146.963 Scope 2: 1646.148 Scope 3: 47486.859 Scope 1+2: 4793.111 Scope 1+2+3: 51894.625
Climate Risk policy	Ecosystem protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Publishing activities	11.69%
Manufacture of machinery and equipment n.e.c.	11.35%
Manufacture of computer, electronic and optical products	8.63%
Activities auxiliary to financial services and insurance activities	8.4%
Financial service activities, except insurance and pension funding	7.66%
Computer programming, consultancy and related activities	5.35%
Retail trade, except of motor vehicles and motorcycles	4.6%
Information service activities	3.85%
Manufacture of electrical equipment	3.53%
Other manufacturing	3.17%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.84%
Wholesale trade, except of motor vehicles and motorcycles	2.63%
Scientific research and development	2.46%
Electricity, gas, steam and air conditioning supply	2.18%
Manufacture of other transport equipment	2.11%
Real estate activities	1.91%
Motion picture, video and television programme production, sound recording and music publishing activities	1.49%
Manufacture of paper and paper products	1.33%
Water collection, treatment and supply	1.3%
Other professional, scientific and technical activities	1.29%
Manufacture of chemicals and chemical products	1.24%
Human health activities	1.18%
Manufacture of motor vehicles, trailers and semi-trailers	1.16%
Warehousing and support activities for transportation	1.11%
Mining of metal ores	1.07%
Waste collection, treatment and disposal activities; materials recovery	1.06%
Food and beverage service activities	0.84%
Manufacture of other non-metallic mineral products	0.73%

Other	0.68%
Activities of head offices; management consultancy activities	0.61%
Construction of buildings	0.61%
Accommodation	0.53%
Manufacture of fabricated metal products, except machinery and equipment	0.5%
Manufacture of textiles	0.47%
Mining support service activities	0.27%
Architectural and engineering activities; technical testing and analysis	0.11%
Manufacture of food products	0.05%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 12.46% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 12.29% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 9.54% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EUROPE REAL ESTATE (the "Financial Product") Entity LEI: 2138008R504FRND40A57

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input type="checkbox"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 86.07% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	8.27 / 10	7.66 / 10	98.85 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	7.92 / 10	7.46 / 10	98.48 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 877.798 Scope 2: 1198.625 Scope 3: 6129.294 Scope 1+2: 2076.423 Scope 1+2+3: 7520.813

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD	% of investments	N/A

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

	Guidelines for multinational enterprises		
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	44.39 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	20.41%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	40.43
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
--------------------------	---------------	-------	-------------

Principal adverse impacts are the most significant negative impacts of investment

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 877.798
Ecosystem protection & Deforestation policy			Scope 2: 1198.625 Scope 3: 6129.294 Scope 1+2: 2076.423 Scope 1+2+3: 7520.813

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
SEGRO PLC XLON GBP	Real estate activities	6.95%	GB
KLEPIERRE XPAR EUR	Real estate activities	6.41%	FR
VONOVIA SE XETR EUR	Real estate activities	5.88%	DE

LEG IMMOBILIEN SE XETR EUR	Real estate activities	5.73%	DE
BRITISH LAND CO PLC XLON GBP	Real estate activities	4.53%	GB
CATENA AB XSTO SEK	Real estate activities	3.86%	SE
SAFESTORE HOLDINGS PLC XLON GBP	Real estate activities	3.79%	GB
UNITE GROUP PLC/THE XLON GBP	Real estate activities	3.59%	GB
ASSURA PLC XLON GBP	Real estate activities	3.07%	GB
WAREHOUSES DE PAUW SCA XBRU EUR	Real estate activities	2.96%	BE
LAND SECURITIES GROUP PLC XLON GBP	Real estate activities	2.71%	GB
GECINA SA XPAR EUR	Real estate activities	2.69%	FR
SAGAX AB-B XSTO SEK	Real estate activities	2.56%	SE
AEDIFICA XBRU EUR	Real estate activities	2.41%	BE
PSP SWISS PROPERTY AG- REG XSWX CHF	Real estate activities	2.37%	CH

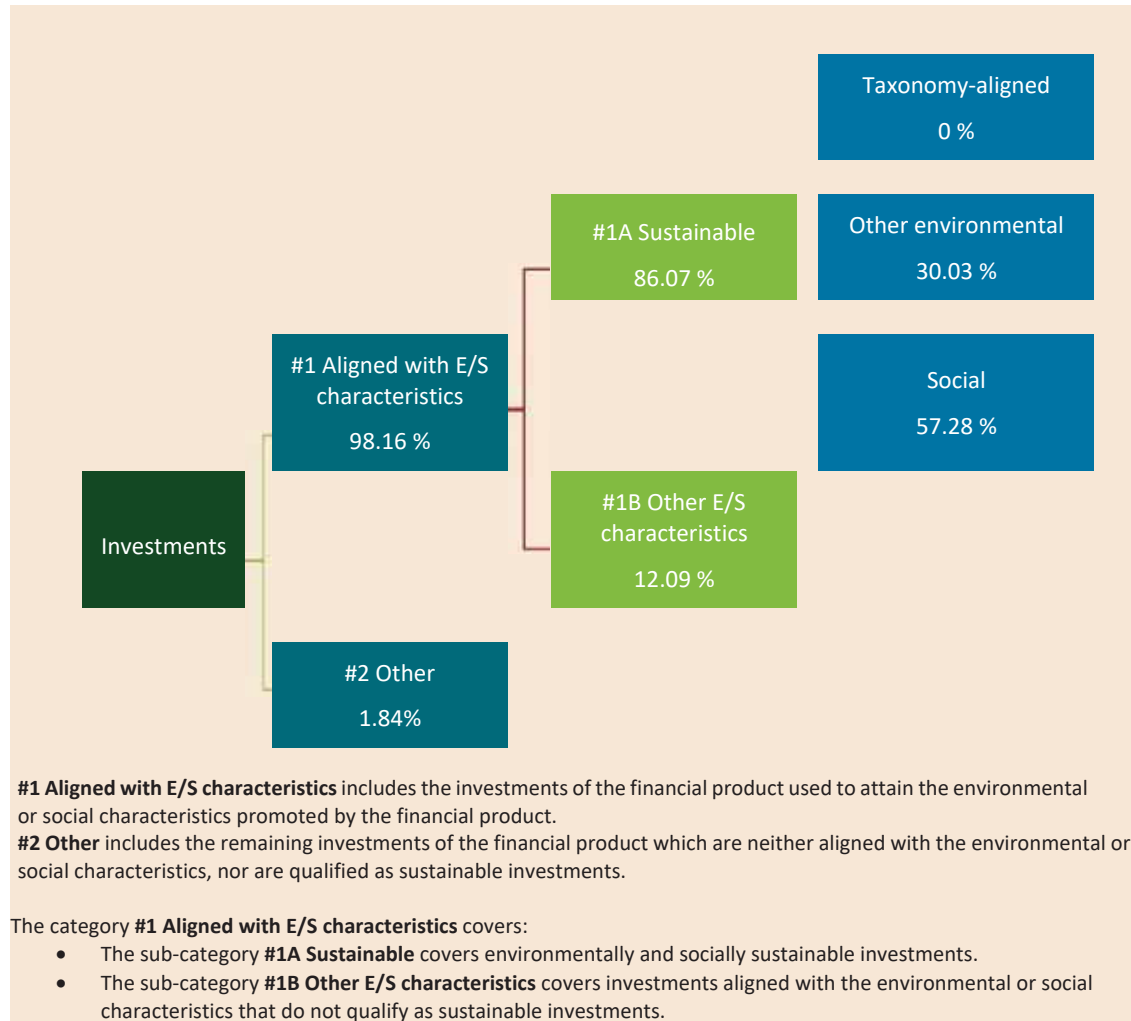

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Real estate activities	98.57%
Financial service activities, except insurance and pension funding	0.77%
Other	0.66%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 30.03% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 57.28% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 1.84% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity related instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and/or for diversification and/or hedging purposes.

Environmental or social safeguards are applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

● **How did this financial product perform compared to the reference benchmark?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EUROPE SMALL CAP (the "Financial Product") Entity LEI: 2138008MKL83N9YYYYJ11

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 71.18% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their E Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	119.31 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	170.4 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.96 %
Water Intensity	1184.91 Thousands of cubic meters for corporates	7683.22 Thousands of cubic meters for corporates	97.62 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	124.38 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	161.53 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.49 %
Water intensity	2022	2116.35 Thousands of cubic meters for corporates	23449.42 Thousands of cubic meters for corporates	98.49 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 2538.329 Scope 2: 2241.595 Scope 3: 260152.125 Scope 1+2: 4779.924 Scope 1+2+3: 264467.125

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	1.844

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	43.19 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14.06%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	38.72
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 2538.329
Ecosystem protection & Deforestation policy			Scope 2: 2241.595 Scope 3: 260152.125 Scope 1+2: 4779.924 Scope 1+2+3: 264467.125
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 21.539
Ecosystem protection & Deforestation policy			Scope 1+2+3: 919.359
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1693.485
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	4.06

Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	N/A
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	38.72
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
INFRASTRUTTURE WIRELESS ITAL MTAA EUR	Civil engineering	2.73%	IT
NEOEN SA XPAR EUR	Electricity, gas, steam and air conditioning supply	2.43%	FR
TECHNIP ENERGIES NV XPAR EUR	Civil engineering	2.38%	FR
FORVIA XPAR EUR	Manufacture of motor vehicles, trailers and semi-trailers	2.37%	FR
SIEGFRIED HOLDING AG-REG XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.37%	CH
SPIE SA XPAR EUR	Architectural and engineering activities; technical testing and analysis	2.36%	FR
AXFOOD AB XSTO SEK	Retail trade, except of motor vehicles and motorcycles	2.33%	SE
SSP GROUP PLC XLON GBP	Food and beverage service activities	2.32%	GB
HILL & SMITH PLC XLON GBP	Manufacture of fabricated metal products, except machinery and equipment	2.31%	GB
ARCADIS NV XAMS EUR	Architectural and engineering activities; technical testing and analysis	2.3%	NL
INTERTEK GROUP PLC XLON GBP	Architectural and engineering activities; technical testing and analysis	2.29%	GB

ASR NEDERLAND NV XAMS EUR	Insurance, reinsurance and pension funding, except compulsory social security	2.19%	NL
AXA Tresor Court Terme Capitalisation EUR	Financial service activities, except insurance and pension funding	2.01%	FR
EDENRED XPAR EUR	Office administrative, office support and other business support activities	2%	FR
LOTUS BAKERIES XBRU EUR	Manufacture of food products	1.93%	BE

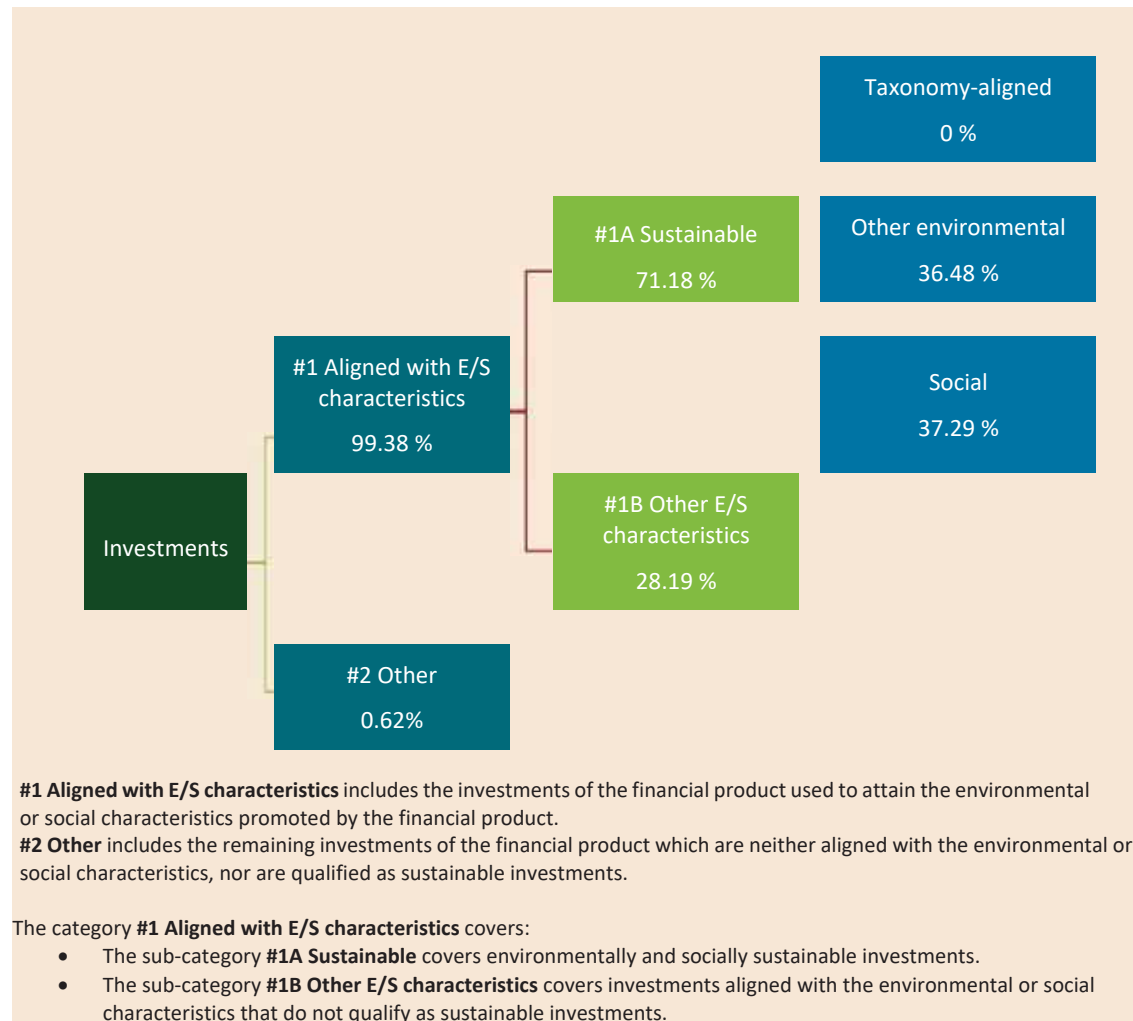

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of machinery and equipment n.e.c.	7.55%
Financial service activities, except insurance and pension funding	7.47%
Real estate activities	7.29%
Architectural and engineering activities; technical testing and analysis	6.95%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	6.09%
Insurance, reinsurance and pension funding, except compulsory social security	5.35%
Civil engineering	5.11%
Manufacture of food products	4.24%
Publishing activities	3.89%
Information service activities	3.89%
Electricity, gas, steam and air conditioning supply	3.77%
Retail trade, except of motor vehicles and motorcycles	3.54%
Manufacture of chemicals and chemical products	3.53%
Manufacture of electrical equipment	3.24%
Wholesale trade, except of motor vehicles and motorcycles	3.01%
Manufacture of motor vehicles, trailers and semi-trailers	2.37%
Food and beverage service activities	2.32%
Manufacture of fabricated metal products, except machinery and equipment	2.31%
Office administrative, office support and other business support activities	2%
Warehousing and support activities for transportation	1.88%
Human health activities	1.72%
Manufacture of computer, electronic and optical products	1.7%
Activities auxiliary to financial services and insurance activities	1.6%
Manufacture of wearing apparel	1.56%
Advertising and market research	1.38%
Waste collection, treatment and disposal activities; materials recovery	1.37%
Computer programming, consultancy and related activities	1.33%

Creative, arts and entertainment activities	1.26%
Manufacture of other non-metallic mineral products	1.03%
Other manufacturing	0.63%
Other	0.37%
Manufacture of beverages	0.28%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 36.48% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 37.29% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 0.62% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EVOLVING TRENDS (the "Financial Product") Entity LEI: 213800XUJVRQ1XWNY135

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 77.64% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	174.05 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	173.19 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.84 %
Water Intensity	1371.14 Thousands of cubic meters for corporates	5549.86 Thousands of cubic meters for corporates	99.84 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	219.03 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	238.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.66 %
Water intensity	2022	2107.87 Thousands of cubic meters for corporates	11618.89 Thousands of cubic meters for corporates	99.66 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	59.54 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14.29%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	31.26
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 7600.919
Ecosystem protection & Deforestation policy			Scope 2: 3159.738
			Scope 3: 52050.281
			Scope 1+2: 10760.656
			Scope 1+2+3: 61336.391
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 21.976

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
ALPHABET INC-CL C XNGS USD	Information service activities	4.61%	US
Portfolio 36445 USD SET SSD	Other	4.49%	N/A
MICROSOFT CORP XNGS USD	Publishing activities	3.46%	US
UNITEDHEALTH GROUP INC XNYS USD	Insurance, reinsurance and pension funding, except compulsory social security	2.91%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	2.77%	US
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	2.69%	US
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	2.34%	US
SERVICENOW INC XNYS USD	Publishing activities	2.3%	US
SIEMENS AG-REG XETR EUR	Manufacture of electrical equipment	2.28%	DE
TE CONNECTIVITY LTD XNYS USD	Manufacture of computer, electronic and optical products	2.26%	US
NATIONAL GRID PLC XLON GBP	Electricity, gas, steam and air conditioning supply	2.18%	GB
BOSTON SCIENTIFIC CORP XNYS USD	Manufacture of computer, electronic and optical products	2.17%	US

FISERV INC XNYS USD	Activities auxiliary to financial services and insurance activities	2.11%	US
SALESFORCE INC XNYS USD	Publishing activities	2.08%	US
AMERICAN EXPRESS CO XNYS USD	Financial service activities, except insurance and pension funding	2.02%	US

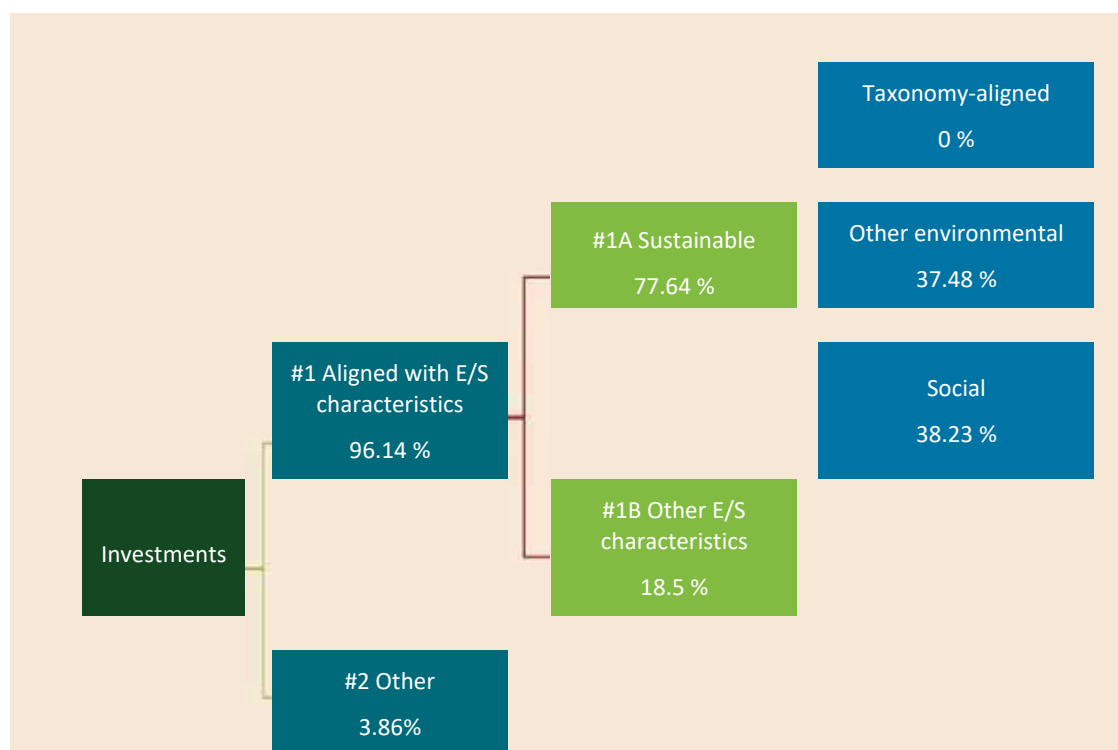

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of computer, electronic and optical products	13.51%
Activities auxiliary to financial services and insurance activities	10.47%
Publishing activities	8.87%
Other manufacturing	8.7%
Manufacture of machinery and equipment n.e.c.	7.7%
Information service activities	5.36%
Electricity, gas, steam and air conditioning supply	4.79%
Insurance, reinsurance and pension funding, except compulsory social security	4.68%
Other	3.87%
Financial service activities, except insurance and pension funding	3.86%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.26%
Retail trade, except of motor vehicles and motorcycles	3.25%
Waste collection, treatment and disposal activities; materials recovery	3.25%
Manufacture of food products	2.92%
Manufacture of electrical equipment	2.44%
Manufacture of chemicals and chemical products	2.32%
Other personal service activities	1.59%
Scientific research and development	1.59%
Real estate activities	1.46%
Manufacture of wearing apparel	1.4%
Manufacture of motor vehicles, trailers and semi-trailers	1.31%
Manufacture of paper and paper products	1.29%
Civil engineering	1.24%
Human health activities	0.89%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 37.48% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 38.23% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 3.86% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - FRAMLINGTON SUSTAINABLE EUROPE (the "Financial Product")

Entity LEI: 213800V707LG6W3DLE71

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 85.53% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Women on Board

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their E Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Women on Board during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Women on Board indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	145.37 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	147.72 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.82 %
Women on Board	42.15 % of women on board	41.24 % of women on board	98.21 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	148.83 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	199.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.56 %
Women on Board	2022	41.37 % of women on board	39.73 % of women on board	99.74 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 37339.957 Scope 2: 13501.329 Scope 3: 1050698.5 Scope 1+2: 50841.285 Scope 1+2+3: 1100571.5

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	12.31 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	12.53%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	42.33
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 37339.957

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies

may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	5.15%	NL
NESTLE SA-REG XSWX CHF	Manufacture of food products	5.08%	CH
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.44%	GB
BNP PARIBAS XPAR EUR	Financial service activities, except insurance and pension funding	4.07%	FR
BP PLC XLON GBP	Manufacture of coke and refined petroleum products	3.65%	GB
NOVO NORDISK A/S-B XCSE DKK	Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.31%	DK
DEUTSCHE TELEKOM AG- REG XETR EUR	Telecommunications	3.25%	DE
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	2.85%	FR
ASHTREAD GROUP PLC XLON GBP	Rental and leasing activities	2.83%	GB
BANCO SANTANDER SA XMAD EUR	Financial service activities, except insurance and pension funding	2.77%	ES
SSE PLC XLON GBP	Electricity, gas, steam and air conditioning supply	2.74%	GB
AXA Tresor Court Terme Capitalisation EUR	Financial service activities, except insurance and pension funding	2.64%	FR
ROCHE HOLDING AG- GENUSSCHEIN XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.55%	CH
LVMH MOET HENNESSY LOUIS VUI XPAR EUR	Manufacture of leather and related products	2.5%	FR

STELLANTIS NV XPAR EUR	Manufacture of motor vehicles, trailers and semi-trailers	2.43%	NL
------------------------	---	-------	----

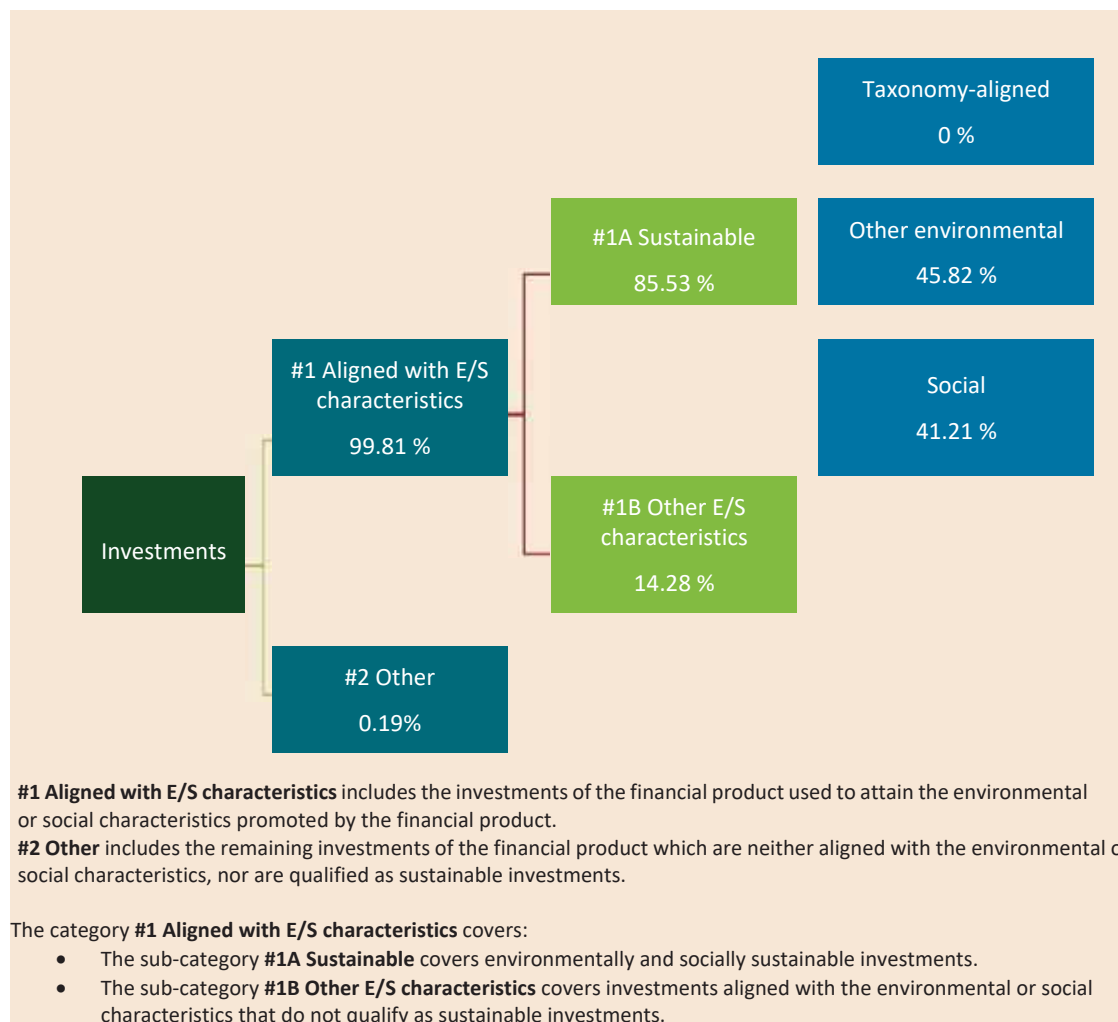

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	13.89%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	11.44%
Manufacture of machinery and equipment n.e.c.	8.35%
Manufacture of food products	6.78%
Manufacture of electrical equipment	4.84%
Electricity, gas, steam and air conditioning supply	4.65%
Manufacture of coke and refined petroleum products	4.62%
Manufacture of chemicals and chemical products	4.61%
Publishing activities	3.97%
Manufacture of motor vehicles, trailers and semi-trailers	3.38%
Information service activities	3.36%
Telecommunications	3.25%
Insurance, reinsurance and pension funding, except compulsory social security	2.9%
Rental and leasing activities	2.83%
Manufacture of leather and related products	2.5%
Food and beverage service activities	2.43%
Activities auxiliary to financial services and insurance activities	2.36%
Advertising and market research	2.02%
Manufacture of computer, electronic and optical products	1.89%
Manufacture of paper and paper products	1.66%
Manufacture of beverages	1.6%
Human health activities	1.54%
Scientific research and development	1.42%
Computer programming, consultancy and related activities	1.23%
Civil engineering	0.93%
Manufacture of other non-metallic mineral products	0.84%
Postal and courier activities	0.4%
Security and investigation activities	0.3%
Other	0.02%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

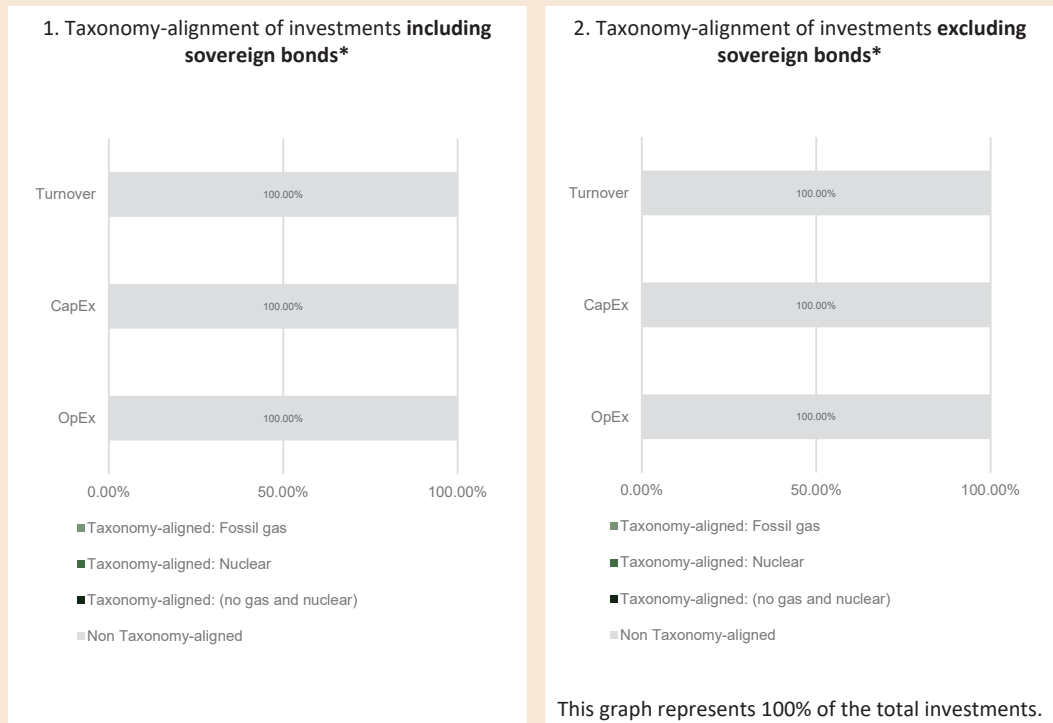

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 45.82% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 41.21% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.19% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

● **How did this financial product perform compared to the reference benchmark?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - FRAMLINGTON SUSTAINABLE EUROZONE (the "Financial Product")

Entity LEI: 213800EVJM9C68HYWU61

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 89.36% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Women on Board

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their E Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Women on Board during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Women on Board indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	147.37 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	150.66 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.41 %
Women on Board	43.45 % of women on board	41.98 % of women on board	97.54 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	156.03 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	240.09 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.7 %
Women on Board	2022	43.78 % of women on board	40.77 % of women on board	97.93 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 44834.543 Scope 2: 18632.281 Scope 3: 854593.188 Scope 1+2: 63466.824 Scope 1+2+3: 917321.5
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 50.923 Scope 1+2+3: 742.612
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 1224.366
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	11.75
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 50.55 Energy Production: 43.39

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.328 Sector NACE D: 2.843 Sector NACE E: 4.15 Sector NACE F: 0.211 Sector NACE G: 0.256
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	5.89
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.043
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.978

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	9.84 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	11.01%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	44.59
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 44834.543
Ecosystem protection & Deforestation policy			Scope 2: 18632.281
			Scope 3: 854593.188
			Scope 1+2: 63466.824
			Scope 1+2+3: 917321.5
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 50.923
Ecosystem protection & Deforestation policy			Scope 1+2+3: 742.612
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1224.366
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	11.75
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 50.55 Energy Production: 43.39
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	5.89
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	44.59
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies

may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	7.11%	NL
LVMH MOET HENNESSY LOUIS VUI XPAR EUR	Manufacture of leather and related products	5.14%	FR
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	4.43%	FR
IBERDROLA SA XMAD EUR	Electricity, gas, steam and air conditioning supply	3.99%	ES
PUBLICIS GROUPE XPAR EUR	Advertising and market research	3.85%	FR

BANCO BILBAO VIZCAYA ARGENTA XMAD EUR	Financial service activities, except insurance and pension funding	2.55%	ES

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	15.56%
Manufacture of machinery and equipment n.e.c.	11.36%
Manufacture of chemicals and chemical products	8.83%
Manufacture of electrical equipment	7.19%
Electricity, gas, steam and air conditioning supply	6.18%
Manufacture of leather and related products	5.14%
Civil engineering	4.4%
Advertising and market research	3.85%
Manufacture of motor vehicles, trailers and semi-trailers	3.52%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.52%
Insurance, reinsurance and pension funding, except compulsory social security	3.25%
Retail trade, except of motor vehicles and motorcycles	3.11%
Telecommunications	2.67%
Publishing activities	2.13%
Other manufacturing	1.91%
Water collection, treatment and supply	1.86%
Manufacture of beverages	1.83%
Scientific research and development	1.49%
Manufacture of coke and refined petroleum products	1.49%
Activities auxiliary to financial services and insurance activities	1.47%
Architectural and engineering activities; technical testing and analysis	1.41%
Computer programming, consultancy and related activities	1.35%
Information service activities	1.29%
Legal and accounting activities	1.17%
Food and beverage service activities	1.14%
Manufacture of food products	0.75%
Manufacture of other non-metallic mineral products	0.72%
Manufacture of paper and paper products	0.69%
Postal and courier activities	0.49%
Other	0.25%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

Yes

In fossil gas In nuclear energy

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 47.16% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 40.89% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.35% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL BUY AND MAINTAIN CREDIT Entity LEI: 213800D3RM8S2NWSUD74

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 68.85% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.26 / 10	6.78 / 10	99.72 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	7.17 / 10	6.67 / 10	98.86 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement

Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	6.01
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.015

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	2.518
-------------------------------------	--	--	-------

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	35.19 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.53%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	35.41
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 8907.119
Ecosystem protection & Deforestation policy			Scope 2: 1644.783 Scope 3: 80467.188 Scope 1+2: 10551.902 Scope 1+2+3: 90881.328
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 60.116
Ecosystem protection & Deforestation policy			Scope 1+2+3: 518.42
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1505.13
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	14.98

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	35.41
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
AXA WF ACT Social Bonds M Capitalisation EUR	Other	0.82%	LU
NYLIFE 4.55% - 28/01/2033	Insurance, reinsurance and pension funding, except compulsory social security	0.82%	US
AEMSPA 1% - 02/11/2033 Call	Electricity, gas, steam and air conditioning supply	0.81%	IT
WBD 4.279% - 15/03/2032 Call	Motion picture, video and television programme production, sound recording and music publishing activities	0.81%	US
DELL 5.75% - 01/02/2033 Call	Manufacture of computer, electronic and optical products	0.81%	US
SCHW 2.45% - 03/03/2027 Call	Activities auxiliary to financial services and insurance activities	0.8%	US
SANUK 6.534% Var - 10/01/2029 Call	Financial service activities, except insurance and pension funding	0.79%	GB
BNCHIL 2.99% - 09/12/2031 Call	Financial service activities, except insurance and pension funding	0.78%	CL
DNBNO 0.25% Var - 23/02/2029 Call	Financial service activities, except insurance and pension funding	0.78%	NO

BABLN 1.375% - 13/09/2027 Call	Warehousing and support activities for transportation	0.77%	GB
BK 5.802% Var - 25/10/2028 Call	Financial service activities, except insurance and pension funding	0.76%	US
GS 2.6% - 07/02/2030 Call	Activities auxiliary to financial services and insurance activities	0.76%	US
BACR 2.645% Var - 24/06/2031 Call	Financial service activities, except insurance and pension funding	0.75%	GB

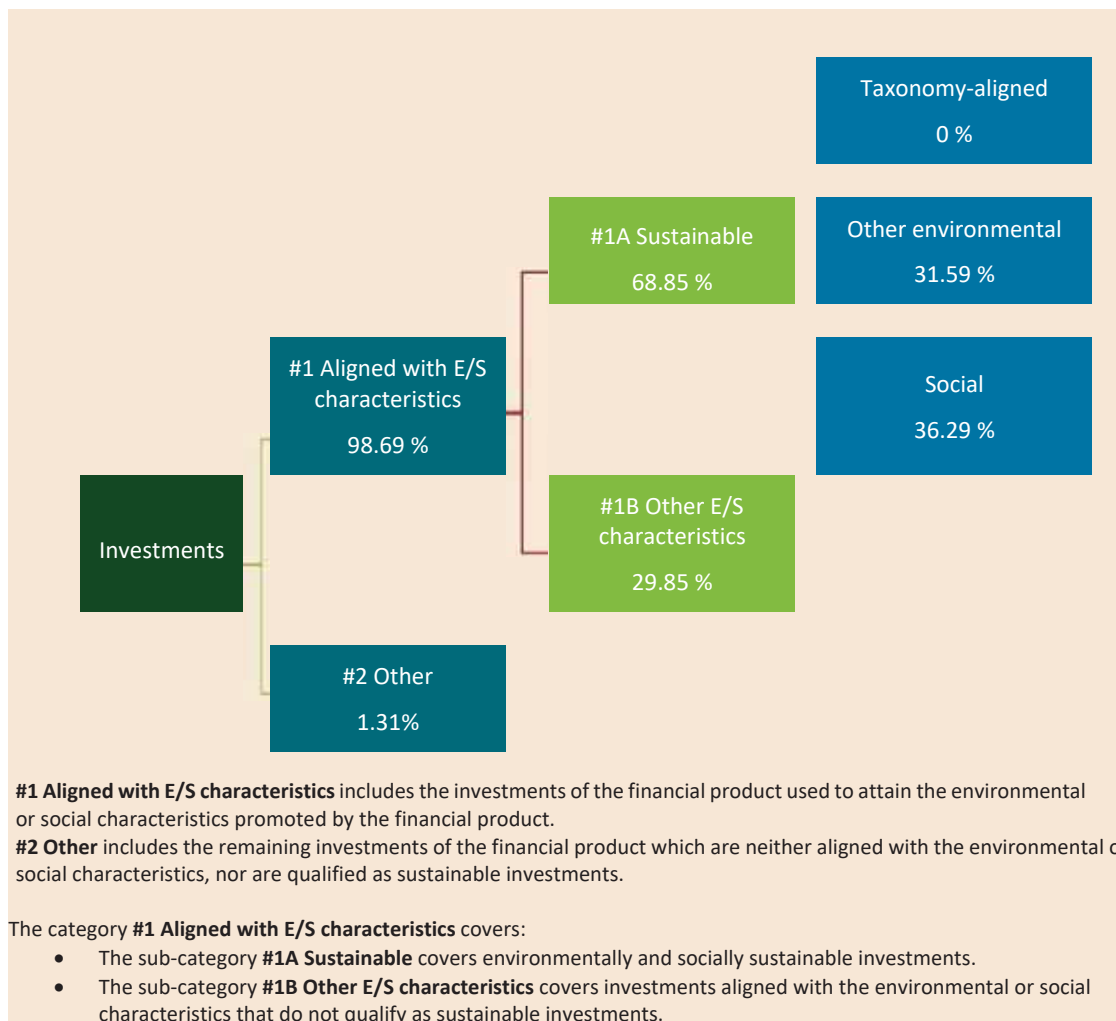

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	26.76%
Electricity, gas, steam and air conditioning supply	10.18%
Insurance, reinsurance and pension funding, except compulsory social security	5.52%
Real estate activities	5.24%
Telecommunications	4.76%
Manufacture of computer, electronic and optical products	4.3%
Manufacture of paper and paper products	4.07%
Activities auxiliary to financial services and insurance activities	3.61%
Manufacture of coke and refined petroleum products	2.94%
Manufacture of motor vehicles, trailers and semi-trailers	2.36%
Retail trade, except of motor vehicles and motorcycles	2.29%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.19%
Manufacture of food products	2.09%
Land transport and transport via pipelines	1.94%
Other	1.82%
Manufacture of electrical equipment	1.79%
Manufacture of chemicals and chemical products	1.66%
Manufacture of beverages	1.66%
Information service activities	1.51%
Publishing activities	1.43%
Warehousing and support activities for transportation	1.37%
Motion picture, video and television programme production, sound recording and music publishing activities	1.37%
Human health activities	1.13%
Wholesale trade, except of motor vehicles and motorcycles	0.92%
Postal and courier activities	0.82%
Advertising and market research	0.78%
Rental and leasing activities	0.69%
Manufacture of other non-metallic mineral products	0.68%

Waste collection, treatment and disposal activities; materials recovery	0.65%
Manufacture of rubber and plastic products	0.61%
Other manufacturing	0.59%
Scientific research and development	0.52%
Manufacture of wearing apparel	0.51%
Manufacture of other transport equipment	0.5%
Civil engineering	0.33%
Manufacture of machinery and equipment n.e.c.	0.3%
Public administration and defence; compulsory social security	0.11%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 31.59% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 36.29% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 1.31% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL CONVERTIBLES (the "Financial Product") Entity LEI: 213800CD6MRQ8HCAOB54

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 58.47% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	196.37 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	401.98 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.69 %
Water Intensity	18044 Thousands of cubic meters for corporates	54980.51 Thousands of cubic meters for corporates	95.68 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	154.67 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	372.98 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	96.03 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly

- contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact ' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 41611.777 Scope 2: 12599.523 Scope 3: 477809.906 Scope 1+2: 54211.301 Scope 1+2+3: 513274.094
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 127.641 Scope 1+2+3: 973.039
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 10447.965
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	2.86
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 64.8 Energy Production: 58.17
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE B: 1.548 Sector NACE C: 0.502 Sector NACE D: 3.169 Sector NACE E: 3.101 Sector NACE F: 0.09 Sector NACE G: 0.037 Sector NACE H: 3.024 Sector NACE L: 0.119
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	0.27
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.029

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	31.354
-------------------------------------	--	--	--------

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	56.1 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.66%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	32.94
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 41611.777
Ecosystem protection & Deforestation policy			Scope 2: 12599.523 Scope 3: 477809.906 Scope 1+2: 54211.301 Scope 1+2+3: 513274.094
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 127.641
Ecosystem protection & Deforestation policy			Scope 1+2+3: 973.039
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 10447.965
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	2.86
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 64.8 Energy Production: 58.17
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	0.27
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	32.94
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
SHOPCN 0.125% - 01/11/2025 Conv	Publishing activities	2.89%	CA
DXCM 0.25% - 15/11/2025 Conv	Other manufacturing	2.64%	US
CLNXSM 0.5% - 05/07/2028 Conv	Civil engineering	2.37%	ES
EXAS 0.375% - 15/03/2027 Conv	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.08%	US
JPM 0 - 10/06/2024 Conv	Financial service activities, except insurance and pension funding	1.91%	FR
LUV 1.25% - 01/05/2025 Conv	Financial service activities, except insurance and pension funding	1.84%	US
JPM 0 - 29/04/2025 Conv	Activities auxiliary to financial services and insurance activities	1.8%	DE
MLFP 0 - 10/11/2023 Conv	Manufacture of rubber and plastic products	1.73%	FR
F 0 - 15/03/2026 Conv	Manufacture of motor vehicles, trailers and semi-trailers	1.72%	US
HYUELE 1.75% - 11/04/2030 Conv	Manufacture of computer, electronic and optical products	1.64%	KR
WOLF 0.25% - 15/02/2028 Conv	Manufacture of computer, electronic and optical products	1.59%	US
BNP 0 - 13/05/2025 Conv	Financial service activities, except insurance and pension funding	1.59%	FR
MITCHM 0 - 29/03/2024 Conv	Manufacture of chemicals and chemical products	1.48%	JP
PRYIM 0 - 02/02/2026 Conv	Manufacture of electrical equipment	1.42%	IT
ARMISG 0 - 25/06/2025 Exch	Financial service activities, except insurance and pension funding	1.37%	DE

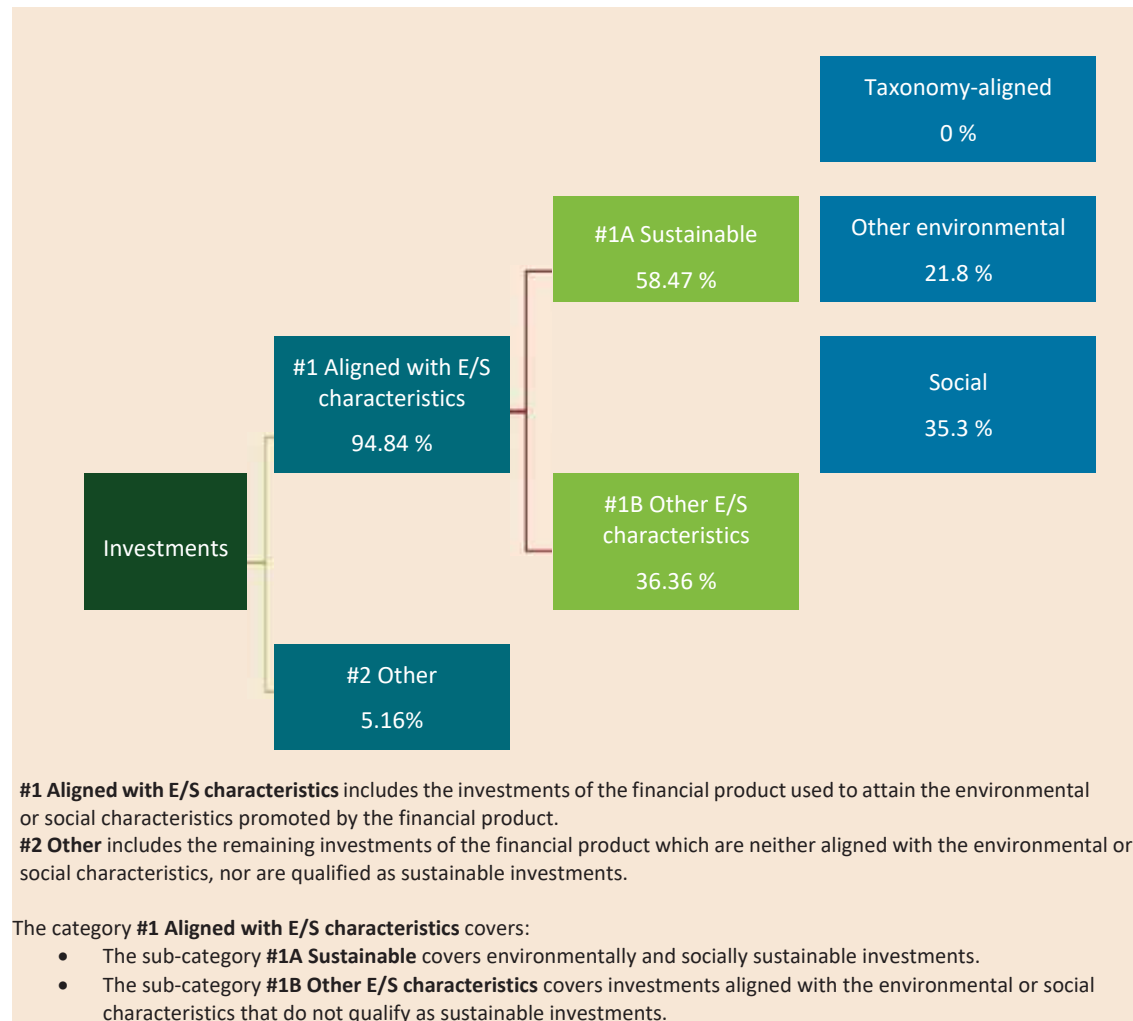

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Publishing activities	13.25%
Financial service activities, except insurance and pension funding	9.44%
Manufacture of computer, electronic and optical products	7.93%
Information service activities	6.95%
Activities auxiliary to financial services and insurance activities	5.69%
Retail trade, except of motor vehicles and motorcycles	4.93%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.34%
Manufacture of electrical equipment	3.73%
Other manufacturing	3.59%
Civil engineering	3.49%
Manufacture of chemicals and chemical products	3.27%
Scientific research and development	3.15%
Air transport	2.82%
Manufacture of motor vehicles, trailers and semi-trailers	2.77%
Telecommunications	1.83%
Electricity, gas, steam and air conditioning supply	1.82%
Mining of metal ores	1.79%
Manufacture of other transport equipment	1.74%
Manufacture of rubber and plastic products	1.73%
Manufacture of basic metals	1.68%
Other	1.49%
Public administration and defence; compulsory social security	1.28%
Office administrative, office support and other business support activities	1.27%
Water collection, treatment and supply	1.11%
Computer programming, consultancy and related activities	1.03%
Manufacture of fabricated metal products, except machinery and equipment	0.97%
Programming and broadcasting activities	0.84%
Postal and courier activities	0.81%
Real estate activities	0.76%

Human health activities	0.74%
Sports activities and amusement and recreation activities	0.57%
Manufacture of machinery and equipment n.e.c.	0.5%
Accommodation	0.49%
Manufacture of beverages	0.48%
Land transport and transport via pipelines	0.43%
Manufacture of coke and refined petroleum products	0.38%
Manufacture of wearing apparel	0.32%
Architectural and engineering activities; technical testing and analysis	0.27%
Warehousing and support activities for transportation	0.24%
Mining support service activities	0.07%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 21.8% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 35.3% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 5.16% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL EMERGING MARKETS BONDS (the "Financial Product") Entity LEI: 213800J9XC2E1QCKZD38

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 14.22% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	4.37 / 10	3.91 / 10	96.72 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	4.31 / 10	3.83 / 10	94.71 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact ' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement

URUGUA 3.875% - 02/07/2040 CPI	Public administration and defence; compulsory social security	1.07%	UY
UAE 4.951% - 07/07/2052	Public administration and defence; compulsory social security	1.07%	AE

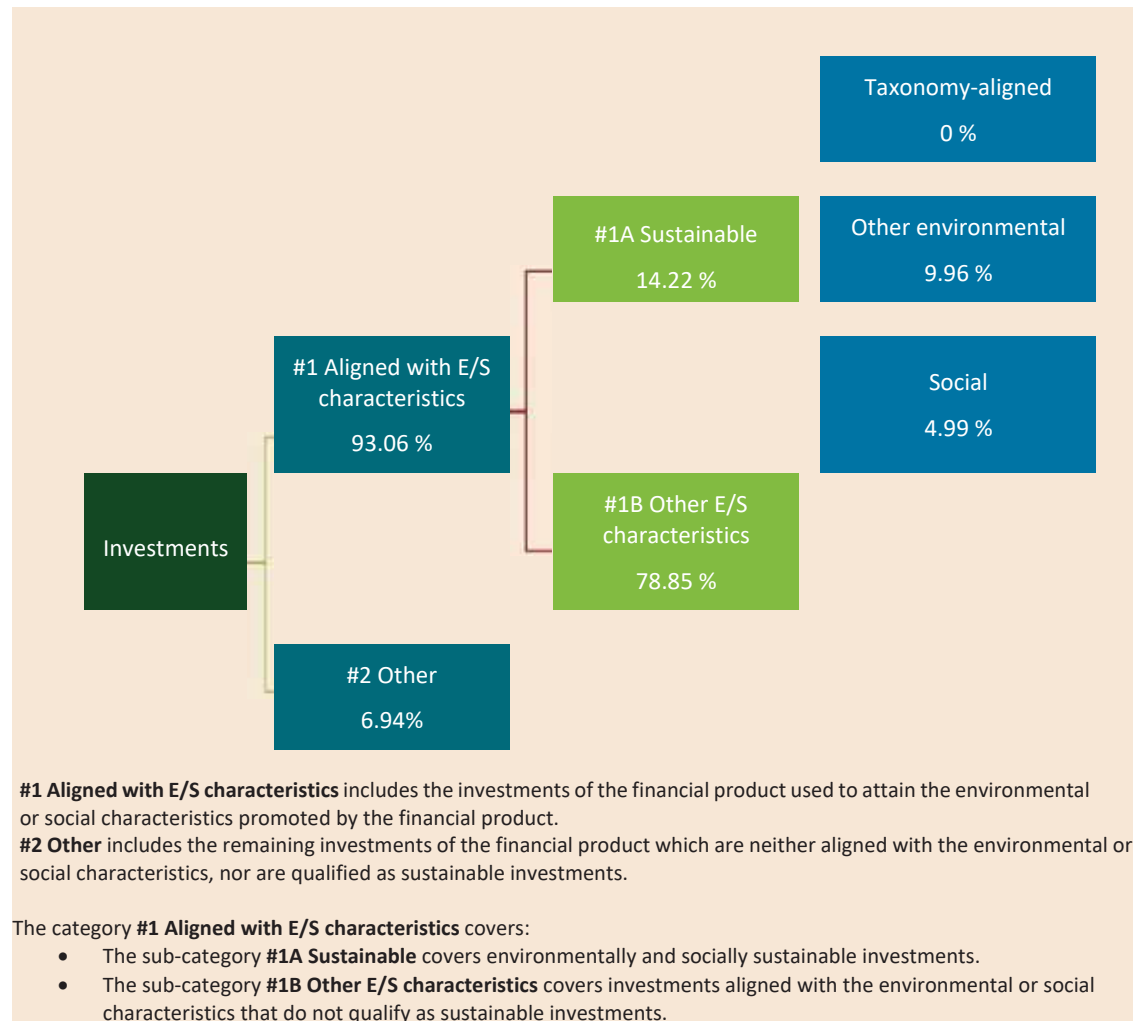

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	67.4%
Manufacture of coke and refined petroleum products	5.59%
Financial service activities, except insurance and pension funding	5.26%
Other	4.03%
Electricity, gas, steam and air conditioning supply	1.95%
Warehousing and support activities for transportation	1.77%
Manufacture of computer, electronic and optical products	1.52%
Land transport and transport via pipelines	1.45%
Real estate activities	1.39%
Mining of metal ores	1.3%
Information service activities	1.06%
Extraction of crude petroleum and natural gas	0.99%
Telecommunications	0.99%
Manufacture of motor vehicles, trailers and semi-trailers	0.64%
Gambling and betting activities	0.62%
Manufacture of chemicals and chemical products	0.59%
Manufacture of electrical equipment	0.55%
Accommodation	0.54%
Manufacture of machinery and equipment n.e.c.	0.46%
Manufacture of basic metals	0.44%
Manufacture of food products	0.39%
Air transport	0.3%
Civil engineering	0.23%
Manufacture of paper and paper products	0.22%
Activities auxiliary to financial services and insurance activities	0.14%
Retail trade, except of motor vehicles and motorcycles	0.13%
Manufacture of beverages	0.05%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

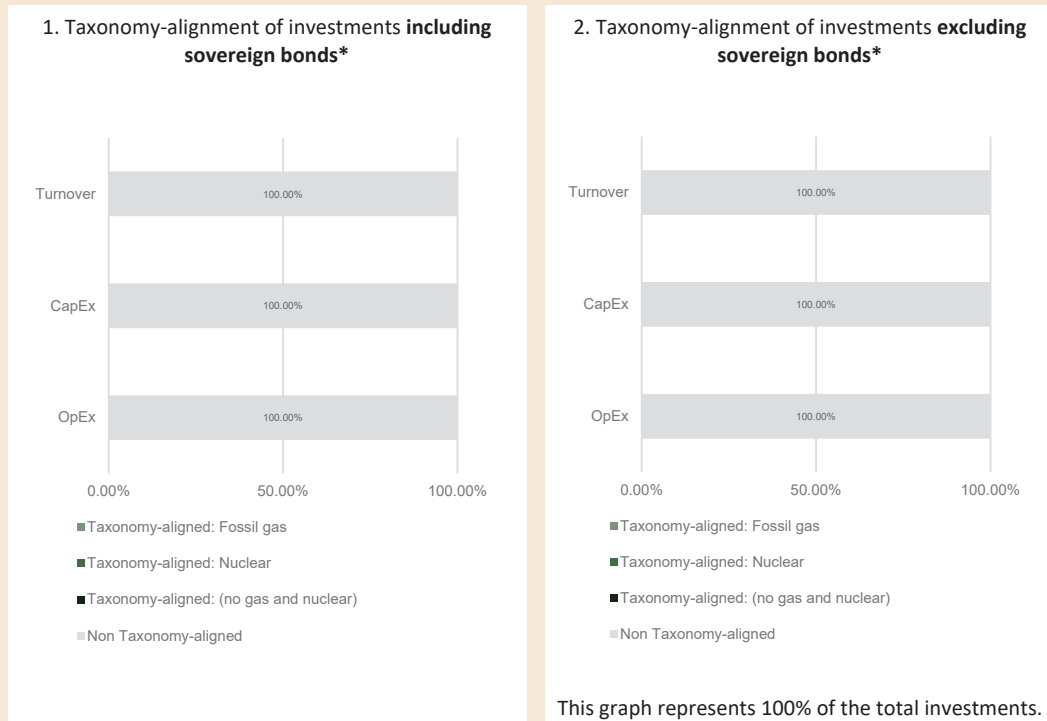

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 9.96% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 4.98% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 6.94% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

● **How did this financial product perform compared to the reference benchmark?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL FLEXIBLE PROPERTY (the "Financial Product") Entity LEI: 213800GJYJUXTCJS5239

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 78.14% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.92 / 10	6.11 / 10	99.05 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	6.65 / 10	6 / 10	98.93 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the

- OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 207.039 Scope 2: 1040.964 Scope 3: 1852.571 Scope 1+2: 1248.003 Scope 1+2+3: 2971.75

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 207.039
Ecosystem protection & Deforestation policy			Scope 2: 1040.964
Climate Risk policy			Scope 3: 1852.571
Ecosystem protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 9.394
Climate Risk policy			Scope 1+2+3: 18.062
Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 397.262
Climate Risk policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	0
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 71.72
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	4.85
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	0
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	31.68
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	0

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for

instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
PROLOGIS INC XNYS USD	Real estate activities	5.81%	US
B 0 - 14/09/2023	Public administration and defence; compulsory social security	3.34%	US

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Real estate activities	94.12%
Public administration and defence; compulsory social security	5.69%
Financial service activities, except insurance and pension funding	3.88%
Other	-3.68%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?**

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

Yes

In fossil gas In nuclear energy

No

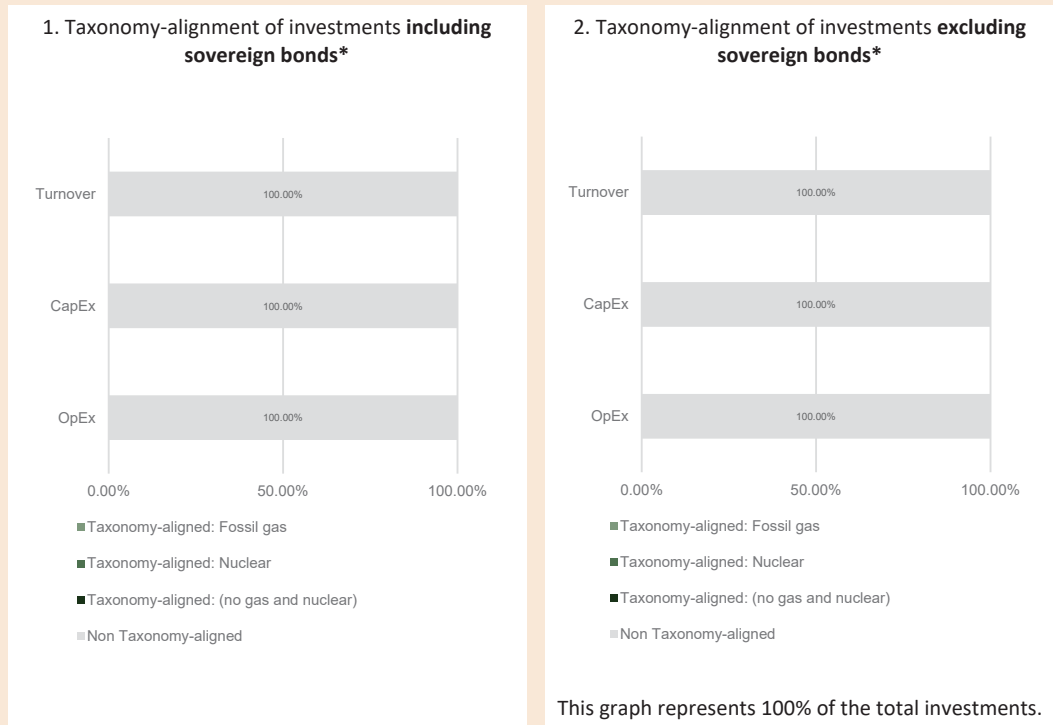

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 37.35% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 41.5% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented -2.22% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and

- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity related instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and/or for diversification and/or hedging purposes.

Environmental or social safeguards are applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Artic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL HIGH YIELD BONDS (the "Financial Product") Entity LEI: 213800ZD79HTOMZACH58

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 27.3% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	5.42 / 10	5.54 / 10	99.34 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	5.23 / 10	5.12 / 10	99.72 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact ' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 39065 Scope 2: 10525.197 Scope 3: 312694.188 Scope 1+2: 49590.199 Scope 1+2+3: 350537.063
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 69.383 Scope 1+2+3: 361.518
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 1473.253

Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	0.52
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.002

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.161
-------------------------------------	--	--	-------

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	38.02 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.03%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	27.59
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 39065
Ecosystem protection & Deforestation policy			Scope 2: 10525.197
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 3: 312694.188
Ecosystem protection & Deforestation policy			Scope 1+2: 49590.199
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 350537.063
Ecosystem protection & Deforestation policy			Scope 1+2: 69.383
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	Scope 1+2+3: 361.518
Ecosystem protection & Deforestation policy			Scope 1+2+3: 1473.253
Climate Risk policy	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	3.54
Climate Risk policy (engagement only)			Energy Consumption: 78.9
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	Energy Production: 53.83
ESG standard policy / violation of international norms and standards			0.52
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Controversial weapons policy	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	27.59
	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
Stand Alone 14988 USD SET SSX	Other	1.1%	N/A
Stand Alone 15215 USD SET SSX	Other	0.88%	N/A
ABEGET 9.75% - 01/03/2027 Call	Information service activities	0.87%	US
MATW 5.25% - 01/12/2025 Call	Other personal service activities	0.76%	US
ZMINFO 3.875% - 01/02/2029 Call	Publishing activities	0.75%	US
VCVHHO 9.75% - 15/08/2026 Call	Information service activities	0.73%	US
BWY 9.25% - 15/04/2027 Call	Manufacture of paper and paper products	0.7%	US
LUMMUS 9% - 01/07/2028 Call	Manufacture of chemicals and chemical products	0.67%	US
GWCN 9.5% - 01/11/2027 Call	Security and investigation activities	0.65%	CA
SSNC 5.5% - 30/09/2027 Call	Publishing activities	0.61%	US

SOLWAT 7.625% - 01/04/2026 Call	Mining support service activities	0.53%	US
CTLT 2.375% - 01/03/2028 Call	Human health activities	0.53%	US

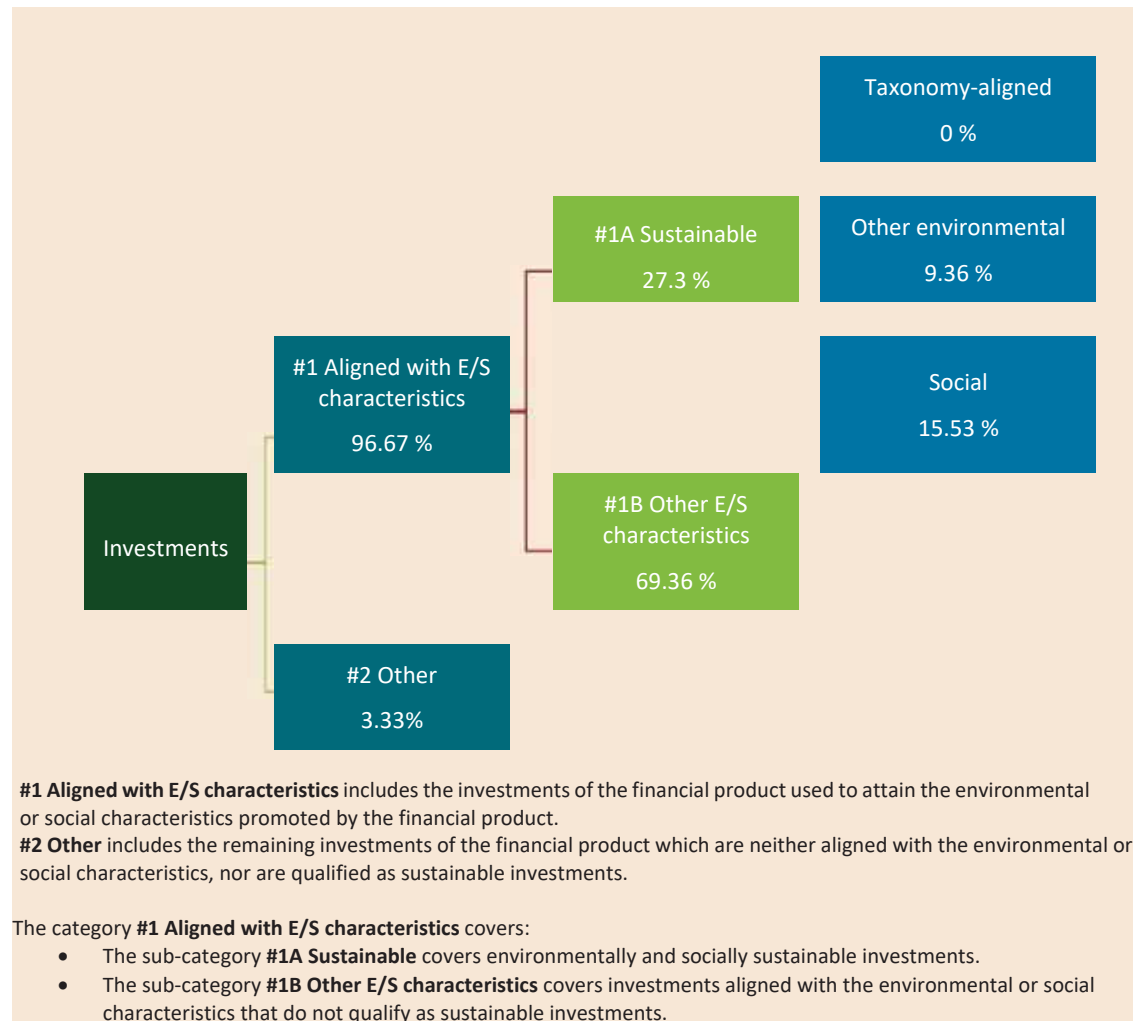

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Publishing activities	7.92%
Telecommunications	7.88%
Manufacture of chemicals and chemical products	5.01%
Financial service activities, except insurance and pension funding	4.36%
Land transport and transport via pipelines	4.3%
Human health activities	3.96%
Real estate activities	3.41%
Manufacture of paper and paper products	3.05%
Information service activities	2.74%
Wholesale trade, except of motor vehicles and motorcycles	2.64%
Manufacture of computer, electronic and optical products	2.62%
Other	2.61%
Gambling and betting activities	2.51%
Manufacture of motor vehicles, trailers and semi-trailers	2.46%
Retail trade, except of motor vehicles and motorcycles	2.4%
Security and investigation activities	2.4%
Manufacture of fabricated metal products, except machinery and equipment	2.31%
Extraction of crude petroleum and natural gas	2.19%
Other manufacturing	2.11%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.09%
Food and beverage service activities	1.86%
Manufacture of food products	1.82%
Activities auxiliary to financial services and insurance activities	1.7%
Office administrative, office support and other business support activities	1.55%
Manufacture of electrical equipment	1.42%
Water transport	1.42%
Accommodation	1.27%
Manufacture of other non-metallic mineral products	1.2%
Electricity, gas, steam and air conditioning supply	1.15%

Computer programming, consultancy and related activities	1.14%
Civil engineering	1.12%
Motion picture, video and television programme production, sound recording and music publishing activities	1.09%
Manufacture of machinery and equipment n.e.c.	1.07%
Mining support service activities	0.91%
Programming and broadcasting activities	0.89%
Advertising and market research	0.88%
Rental and leasing activities	0.84%
Insurance, reinsurance and pension funding, except compulsory social security	0.77%
Other personal service activities	0.76%
Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	0.76%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.74%
Sports activities and amusement and recreation activities	0.69%
Manufacture of wearing apparel	0.59%
Manufacture of other transport equipment	0.59%
Manufacture of rubber and plastic products	0.59%
Creative, arts and entertainment activities	0.54%
Scientific research and development	0.49%
Waste collection, treatment and disposal activities; materials recovery	0.48%
Manufacture of beverages	0.38%
Manufacture of basic metals	0.31%
Warehousing and support activities for transportation	0.3%
Education	0.28%
Mining of metal ores	0.25%
Manufacture of leather and related products	0.24%
Repair and installation of machinery and equipment	0.19%
Manufacture of coke and refined petroleum products	0.14%
Construction of buildings	0.12%
Crop and animal production, hunting and related service activities	0.11%

Services to buildings and landscape activities	0.11%
Sewerage	0.09%
Legal and accounting activities	0.09%
Manufacture of furniture	0.07%
Printing and reproduction of recorded media	0.04%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 9.36% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 15.53% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 3.34% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL INCOME GENERATION (the "Financial Product") Entity LEI: 213800P3YKJP6NILO102

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 52.44% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.73 / 10	6.2 / 10	98.18 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	6.59 / 10	6.02 / 10	98.1 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 23883.574 Scope 2: 5838.187 Scope 3: 249953.766 Scope 1+2: 29721.762 Scope 1+2+3: 276674.938
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 88.885 Scope 1+2+3: 665.748

Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 68.22 Energy Production: 70.89
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE B: 1.028 Sector NACE C: 0.725 Sector NACE D: 5.46 Sector NACE E: 0.564 Sector NACE F: 0.007 Sector NACE G: 0.31 Sector NACE H: 1.622 Sector NACE L: 0.361
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	5.31

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.032
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	108.383

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	26.11 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.23%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	33.4
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 23883.574
Ecosystem protection & Deforestation policy			Scope 2: 5838.187 Scope 3: 249953.766 Scope 1+2: 29721.762 Scope 1+2+3: 276674.938
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 88.885
Ecosystem protection & Deforestation policy			Scope 1+2+3: 665.748
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1908.985
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	9.09
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 68.22 Energy Production: 70.89
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	5.31

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	33.4
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
AXA WF Longevity Economy M Capitalisation EUR	Financial service activities, except insurance and pension funding	3.6%	LU
BNP P ENERGY & METAL UCITS	Financial service activities, except insurance and pension funding	3.42%	LU
COCA-COLA CO/THE XNYS USD	Manufacture of beverages	0.88%	US
ABBVIE INC XNYS USD	Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.85%	US
PFIZER INC XNYS USD	Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.74%	US

-------------------------------	---	-------	----

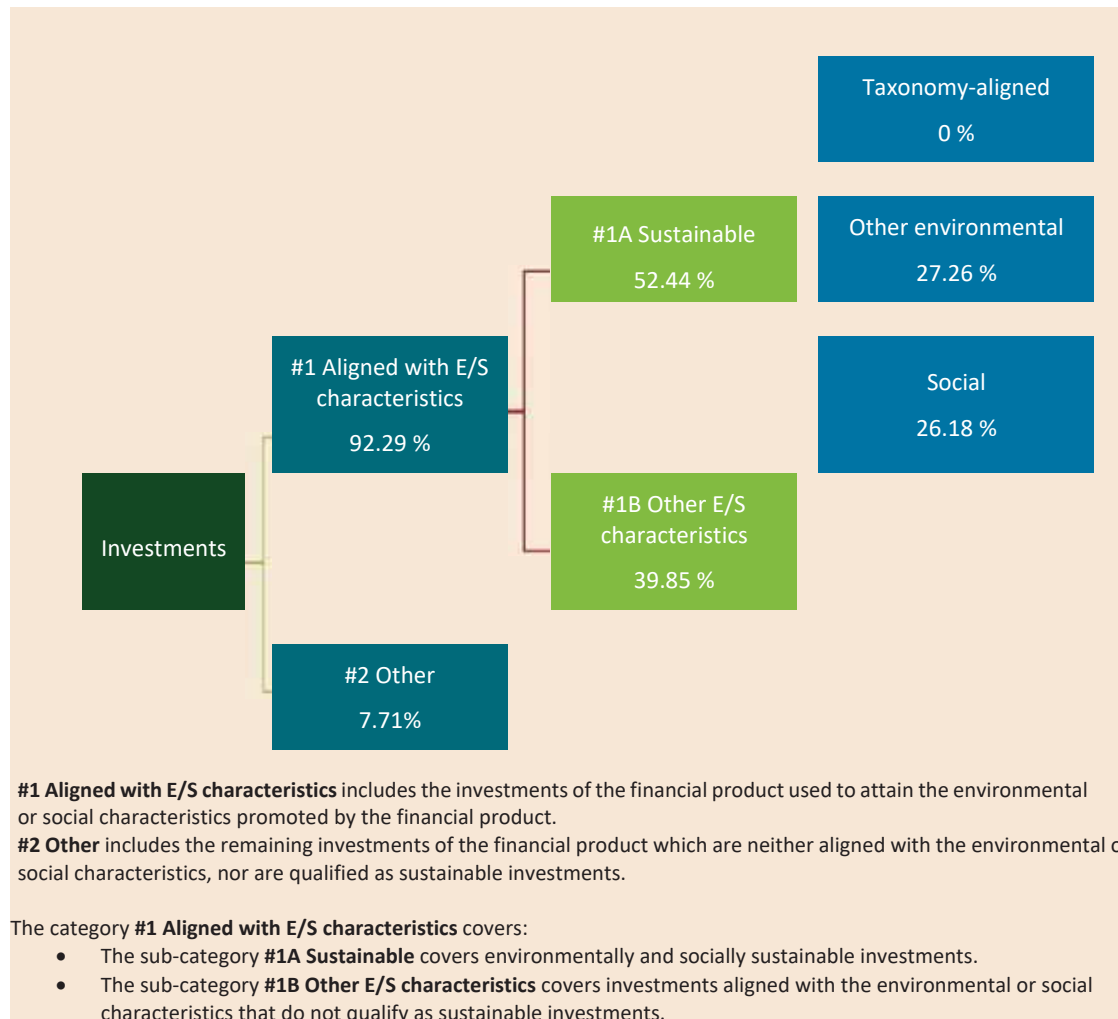

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	21.72%
Public administration and defence; compulsory social security	7.97%
Telecommunications	6.04%
Insurance, reinsurance and pension funding, except compulsory social security	5.09%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.57%
Real estate activities	4.51%
Electricity, gas, steam and air conditioning supply	4.24%
Manufacture of motor vehicles, trailers and semi-trailers	3.67%
Manufacture of chemicals and chemical products	3.12%
Mining of metal ores	2.7%
Manufacture of coke and refined petroleum products	2.68%
Manufacture of paper and paper products	2.59%
Manufacture of computer, electronic and optical products	2.58%
Land transport and transport via pipelines	2.56%
Other	2.37%
Manufacture of beverages	2.19%
Manufacture of food products	2.13%
Activities auxiliary to financial services and insurance activities	1.86%
Warehousing and support activities for transportation	1.66%
Computer programming, consultancy and related activities	1.11%
Information service activities	0.96%
Retail trade, except of motor vehicles and motorcycles	0.85%
Gambling and betting activities	0.84%
Office administrative, office support and other business support activities	0.84%
Wholesale trade, except of motor vehicles and motorcycles	0.79%
Extraction of crude petroleum and natural gas	0.73%
Motion picture, video and television programme production, sound recording and music publishing activities	0.63%

Manufacture of electrical equipment	0.62%
Water transport	0.6%
Rental and leasing activities	0.58%
Civil engineering	0.57%
Scientific research and development	0.56%
Manufacture of fabricated metal products, except machinery and equipment	0.55%
Human health activities	0.54%
Construction of buildings	0.53%
Publishing activities	0.48%
Waste collection, treatment and disposal activities; materials recovery	0.46%
Manufacture of machinery and equipment n.e.c.	0.32%
Activities of head offices; management consultancy activities	0.28%
Employment activities	0.25%
Other manufacturing	0.24%
Advertising and market research	0.23%
Crop and animal production, hunting and related service activities	0.23%
Manufacture of other transport equipment	0.22%
Accommodation	0.22%
Legal and accounting activities	0.2%
Manufacture of wearing apparel	0.15%
Repair and installation of machinery and equipment	0.15%
Manufacture of rubber and plastic products	0.13%
Security and investigation activities	0.12%
Food and beverage service activities	0.12%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.1%
Education	0.1%
Sports activities and amusement and recreation activities	0.08%
Services to buildings and landscape activities	0.08%
Manufacture of other non-metallic mineral products	0.07%
Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	0.07%

Sewerage	0.06%
Manufacture of furniture	0.05%
Postal and courier activities	0.04%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
 In fossil gas In nuclear energy

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 27.26% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 26.18% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 7.71% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to

attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL INFLATION BONDS REDEX (the "Financial Product") Entity LEI: 2138005OTTGJJ1R33Q91

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It **promoted E/S characteristics, but did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6 / 10		100 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	5.95 / 10		100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

The Financial product did not make any sustainable investments during the reference period.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Financial product did not make any sustainable investments during the reference period.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial product did not make any sustainable investments during the reference period.

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial product did not make any sustainable investments during the reference period.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	N/A
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or	N/A
Ecosystem protection & Deforestation policy			

rights, anti-corruption and anti-bribery matters.

		dollar invested (tCO2e/M€ or tCO2e/M\$)	
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	N/A
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	N/A

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	99.06%
Other	0.94%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

Not applicable.

● **What was the share of socially sustainable investments?**

Not applicable.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.47% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

● **How did this financial product perform compared to the reference benchmark?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL INFLATION BONDS (the "Financial Product") Entity LEI: 213800B3CJEB7BTR4711

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 1.84% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Investment Universe	Coverage
ESG Score	5.97 / 10	5.94 / 10	99.98 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Investment Universe	Coverage
ESG Score	2022	6 / 10	5.92 / 10	99.81 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly

contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 128.107 Scope 2: 28.628 Scope 3: 2660.021 Scope 1+2: 156.734 Scope 1+2+3: 2786.433
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 10.334 Scope 1+2+3: 2.119
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1025.826
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	0.06
SDG no significantly negative score	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 53.11 Energy Production: 62.05
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.059 Sector NACE D: 2.808 Sector NACE F: 0.169 Sector NACE G: 0.019 Sector NACE H: 1.171 Sector NACE L: 0.227
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	0.05
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	N/A
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.001

Social and Governance:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	0.17 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.9%
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	40
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 128.107
Ecosystem protection & Deforestation policy			Scope 2: 28.628 Scope 3: 2660.021 Scope 1+2: 156.734 Scope 1+2+3: 2786.433
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 10.334
Ecosystem protection & Deforestation policy			Scope 1+2+3: 2.119
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1025.826
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	0.06
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	0.05
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
TII 1.25% - 15/04/2028 CPI	Public administration and defence; compulsory social security	2.54%	US
TII 0.125% - 15/01/2031 CPI	Public administration and defence; compulsory social security	2.42%	US
TII 0.125% - 15/04/2027 CPI	Public administration and defence; compulsory social security	2.41%	US
AXA WF Global Inflation Short Duration Bonds M (H)	Financial service activities, except insurance and pension funding	2.31%	LU

TII 3.875% - 15/04/2029 CPI	Public administration and defence; compulsory social security	1.96%	US
TII 0.5% - 15/01/2028 CPI	Public administration and defence; compulsory social security	1.79%	US
TII 0.125% - 15/07/2031 CPI	Public administration and defence; compulsory social security	1.75%	US
TII 0.125% - 15/01/2032 CPI	Public administration and defence; compulsory social security	1.71%	US
UKTI 0.125% - 22/03/2026 CPI	Public administration and defence; compulsory social security	1.65%	GB
TII 0.875% - 15/01/2029 CPI	Public administration and defence; compulsory social security	1.58%	US
TII 0.625% - 15/07/2032 CPI	Public administration and defence; compulsory social security	1.51%	US
FRTR 1.85% - 25/07/2027 CPI	Public administration and defence; compulsory social security	1.51%	FR
TII 0.25% - 15/07/2029 CPI	Public administration and defence; compulsory social security	1.5%	US
TII 0.375% - 15/07/2027 CPI	Public administration and defence; compulsory social security	1.48%	US
UKTI 1.25% - 22/11/2027 CPI	Public administration and defence; compulsory social security	1.48%	GB

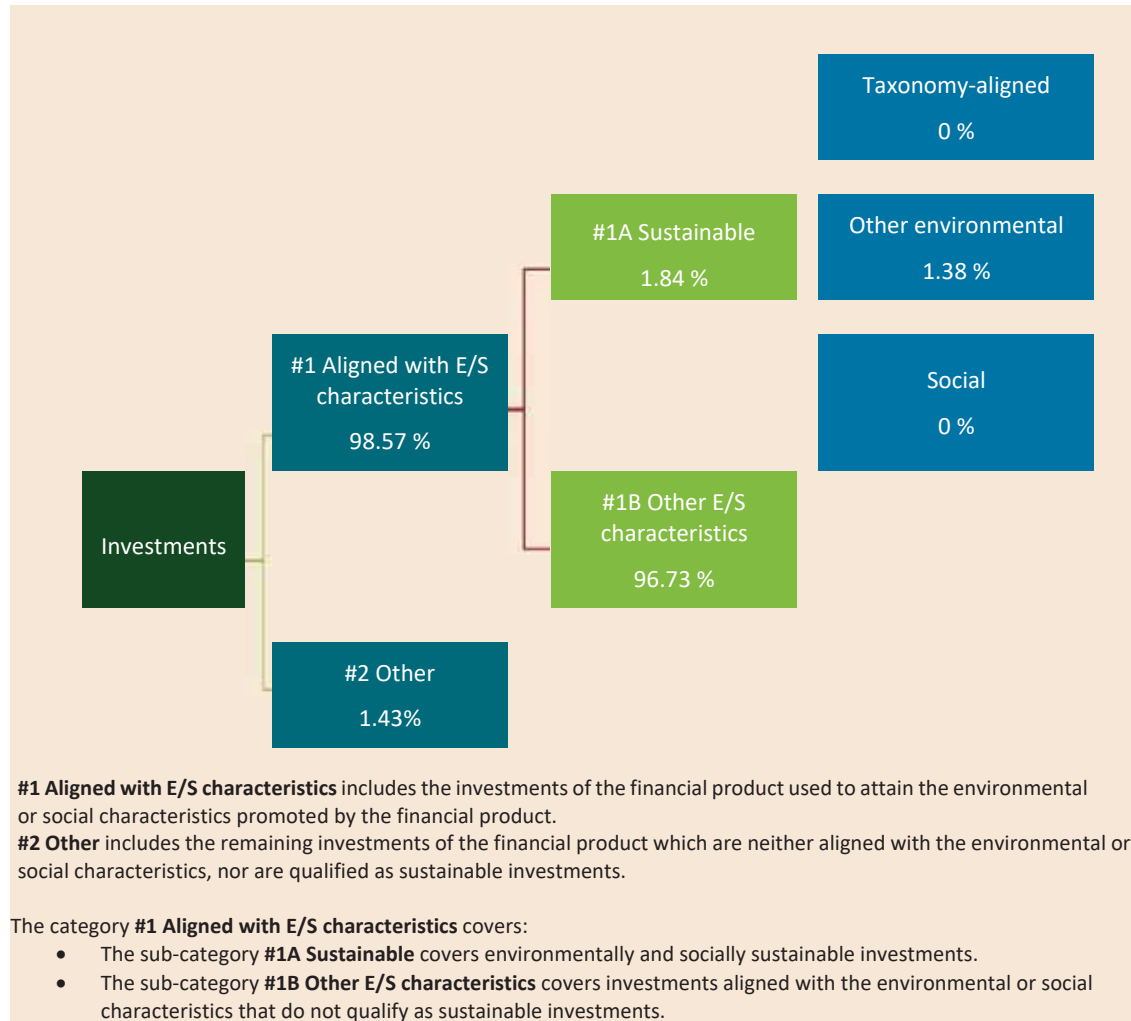

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	94.91%
Financial service activities, except insurance and pension funding	3.13%
Other	1.41%
Land transport and transport via pipelines	0.55%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 1.38% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

Not applicable.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 1.43% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

● **How did this financial product perform compared to the reference benchmark?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL INFLATION SHORT DURATION BONDS (the "Financial Product") **Entity LEI:** 2138002AGTWONS399W19

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 0.03% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	5.87 / 10	5.87 / 10	100 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	5.88 / 10	5.88 / 10	100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact ' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	N/A
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	N/A
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	N/A
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	N/A
SDG no significantly negative score	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	N/A
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	N/A
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	N/A
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	N/A
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	N/A

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	N/A
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	N/A
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint		N/A

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Ecosystem protection & Deforestation policy		Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	N/A
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	N/A
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	N/A
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
TII 0.625% - 15/01/2026 CPI	Public administration and defence; compulsory social security	7.4%	US
TII 0.375% - 15/01/2027 CPI	Public administration and defence; compulsory social security	4.99%	US
TII 0.375% - 15/07/2025 CPI	Public administration and defence; compulsory social security	4.47%	US
TII 0.375% - 15/07/2027 CPI	Public administration and defence; compulsory social security	4.21%	US
TII 1.25% - 15/04/2028 CPI	Public administration and defence; compulsory social security	4.14%	US
TII 0.125% - 15/10/2026 CPI	Public administration and defence; compulsory social security	4.04%	US
TII 1.625% - 15/10/2027 CPI	Public administration and defence; compulsory social security	3.83%	US

TII 0.125% - 15/04/2026 CPI	Public administration and defence; compulsory social security	3.75%	US
TII 0.125% - 15/10/2025 CPI	Public administration and defence; compulsory social security	3.51%	US
TII 0.5% - 15/01/2028 CPI	Public administration and defence; compulsory social security	3.46%	US
TII 0.25% - 15/01/2025 CPI	Public administration and defence; compulsory social security	3.44%	US
FRTR 1.85% - 25/07/2027 CPI	Public administration and defence; compulsory social security	3.32%	FR
UKTI 1.25% - 22/11/2027 CPI	Public administration and defence; compulsory social security	3.09%	GB
TII 0.125% - 15/04/2025 CPI	Public administration and defence; compulsory social security	3.02%	US
TII 0.125% - 15/04/2027 CPI	Public administration and defence; compulsory social security	2.98%	US

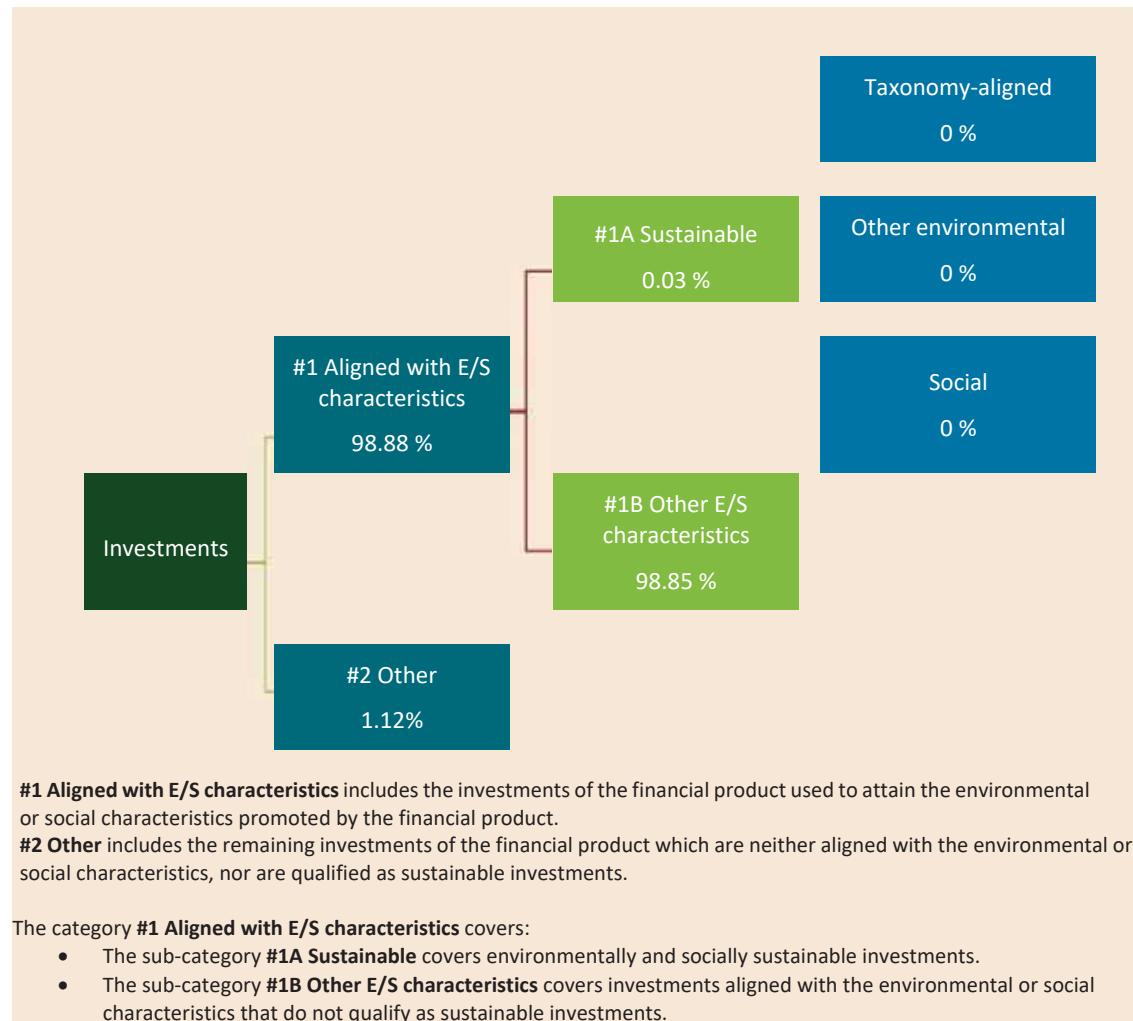

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	98.71%
Other	1.29%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

Not applicable.

● **What was the share of socially sustainable investments?**

Not applicable.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 1.12% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

● **How did this financial product perform compared to the reference benchmark?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL OPTIMAL INCOME (the "Financial Product") Entity LEI: 213800VRWFHRN3LIZV13

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 56.16% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	7.19 / 10	6.36 / 10	99.18 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	6.99 / 10	6.22 / 10	99.65 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 16428.068 Scope 2: 5878.932 Scope 3: 417877.125 Scope 1+2: 22307 Scope 1+2+3: 439283.313
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 35.159 Scope 1+2+3: 554.614
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 1645.377
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	5.64
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 53.12 Energy Production: 54.51
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE A: 0.667 Sector NACE B: 1.622 Sector NACE C: 0.758 Sector NACE D: 2.634 Sector NACE E: 1.886 Sector NACE F: 13.351 Sector NACE G: 0.168 Sector NACE H: 0.78 Sector NACE L: 0.492
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	4.47

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.007
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	36.245

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	29.19 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	35.53
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 16428.068
Ecosystem protection & Deforestation policy			Scope 2: 5878.932 Scope 3: 417877.125 Scope 1+2: 22307 Scope 1+2+3: 439283.313
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 35.159
Ecosystem protection & Deforestation policy			Scope 1+2+3: 554.614
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1645.377
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	5.64
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 53.12 Energy Production: 54.51
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	4.47
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	35.53
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
AXA WF Global Emerging Markets Bonds M (H) Capital	Financial service activities, except insurance and pension funding	2.46%	LU
MICROSOFT CORP XNGS USD	Publishing activities	2.26%	US
AXA WF Inflation Plus M Capitalisation EUR	Financial service activities, except insurance and pension funding	1.99%	LU
Portfolio 49272 USD SET SSX	Other	1.83%	N/A
STELLANTIS NV XPAR EUR	Manufacture of motor vehicles, trailers and semi-trailers	1.64%	NL
KEYENCE CORP XTKS JPY	Manufacture of machinery and equipment n.e.c.	1.64%	JP
CHECK POINT SOFTWARE TECH XNGS USD	Publishing activities	1.55%	IL
ALPHABET INC-CL A XNGS USD	Information service activities	1.47%	US
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	1.36%	US
MSCI INC XNYS USD	Information service activities	1.28%	US
MASTERCARD INC - A XNYS USD	Activities auxiliary to financial services and insurance activities	1.27%	US
MOODY'S CORP XNYS USD	Information service activities	1.26%	US
PRYSMIAN SPA MTAA EUR	Manufacture of electrical equipment	1.17%	IT
ISHARES PHYSICAL GOLD ETC	Financial service activities, except insurance and pension funding	1.14%	IE
PALO ALTO NETWORKS INC XNGS USD	Publishing activities	1.11%	US

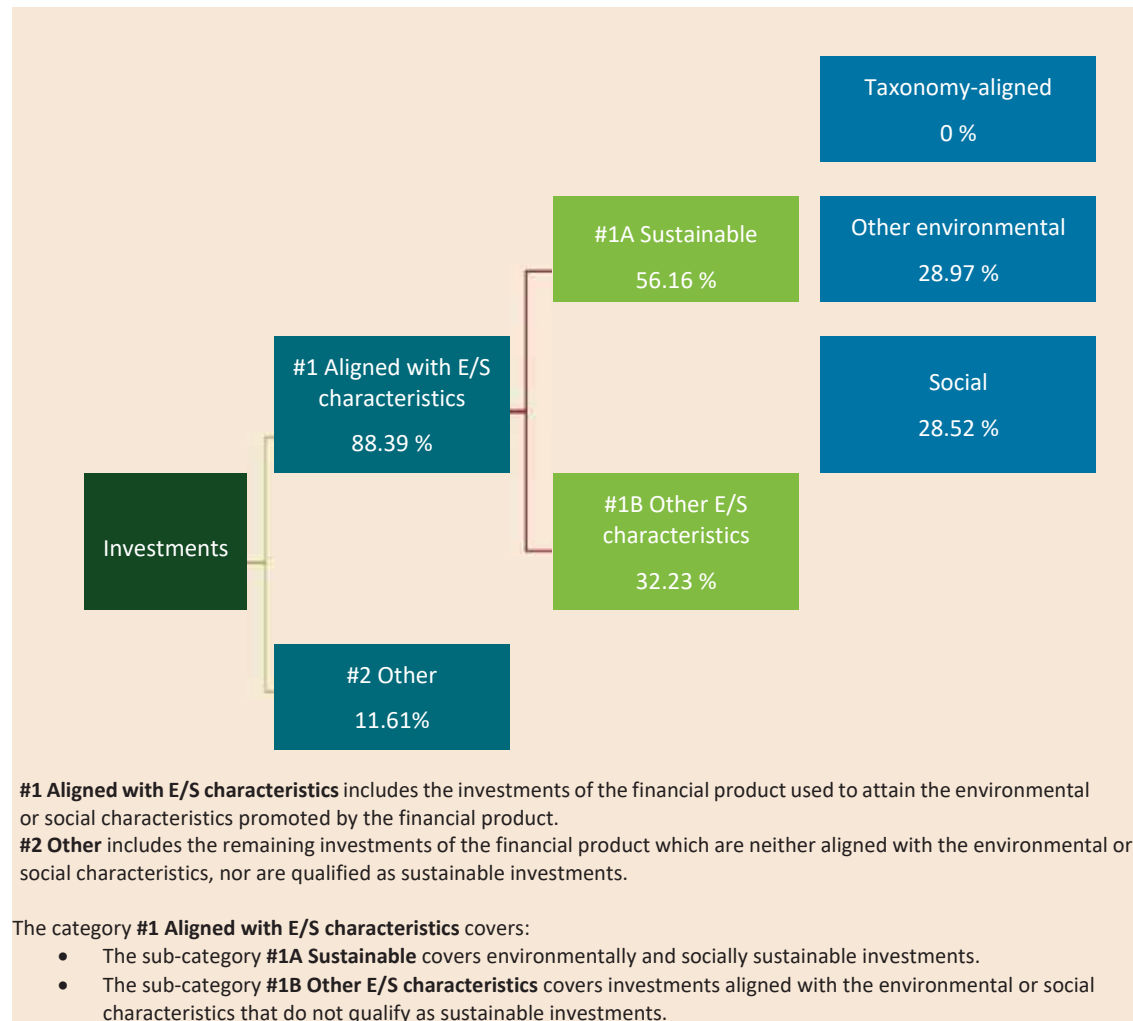

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	20.63%
Publishing activities	7.09%
Other	7.06%
Manufacture of machinery and equipment n.e.c.	5.99%
Information service activities	4.99%
Manufacture of computer, electronic and optical products	4.8%
Manufacture of motor vehicles, trailers and semi-trailers	4.34%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.3%
Public administration and defence; compulsory social security	3.66%
Activities auxiliary to financial services and insurance activities	3.62%
Electricity, gas, steam and air conditioning supply	3.29%
Other manufacturing	3.06%
Retail trade, except of motor vehicles and motorcycles	2.61%
Manufacture of electrical equipment	2.37%
Manufacture of coke and refined petroleum products	2.35%
Insurance, reinsurance and pension funding, except compulsory social security	2.26%
Manufacture of chemicals and chemical products	2.18%
Manufacture of beverages	2.15%
Telecommunications	1.38%
Computer programming, consultancy and related activities	1.34%
Mining of metal ores	1.21%
Real estate activities	1.07%
Manufacture of food products	0.97%
Manufacture of leather and related products	0.84%
Warehousing and support activities for transportation	0.71%
Manufacture of other non-metallic mineral products	0.69%
Civil engineering	0.5%
Manufacture of paper and paper products	0.44%
Manufacture of rubber and plastic products	0.42%

Accommodation	0.42%
Land transport and transport via pipelines	0.35%
Sports activities and amusement and recreation activities	0.35%
Rental and leasing activities	0.27%
Architectural and engineering activities; technical testing and analysis	0.27%
Motion picture, video and television programme production, sound recording and music publishing activities	0.21%
Office administrative, office support and other business support activities	0.2%
Manufacture of other transport equipment	0.2%
Postal and courier activities	0.19%
Advertising and market research	0.18%
Crop and animal production, hunting and related service activities	0.16%
Scientific research and development	0.16%
Air transport	0.16%
Wholesale trade, except of motor vehicles and motorcycles	0.11%
Waste collection, treatment and disposal activities; materials recovery	0.09%
Fishing and aquaculture	0.09%
Human health activities	0.07%
Water collection, treatment and supply	0.06%
Food and beverage service activities	0.06%
Mining support service activities	0.04%
Construction of buildings	0.02%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.02%
Extraction of crude petroleum and natural gas	0.01%
Manufacture of wearing apparel	0%
Legal and accounting activities	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 28.97% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 28.52% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 11.61% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL REAL ESTATE (the "Financial Product") Entity LEI: 213800RDYM8R86GJH846

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 74.3% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6.53 / 10	5.87 / 10	98.82 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	6.35 / 10	5.65 / 10	98.41 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts ("PAIs") indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	30.42
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 588.436 Scope 2: 2470.884

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Ecosystem protection & Deforestation policy			Scope 3: 5697.906 Scope 1+2: 3059.319 Scope 1+2+3: 8377.932	
Climate Risk policy	Ecosystem protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy				Scope 1+2: 10.626 Scope 1+2+3: 27.333
Climate Risk policy	Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy				Scope 1+2+3: 459.272
Climate Risk policy		PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	0.1
Climate Risk policy (engagement only)		PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 71.34 Energy Production: 60.89
Ecosystem protection & Deforestation policy		PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	6.73
ESG standard policy / violation of international norms and standards		PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity		PAI 13: Board Gender diversity	Expressed as a percentage of all board members	30.42
Controversial weapons policy		PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
PROLOGIS INC XNYS USD	Real estate activities	9.59%	US
EQUINIX INC XNGS USD	Real estate activities	4.99%	US
AVALONBAY COMMUNITIES INC XNYS USD	Real estate activities	4.1%	US

WELLTOWER INC XNYS USD	Real estate activities	3.57%	US
EXTRA SPACE STORAGE INC XNYS USD	Real estate activities	3.5%	US
GOODMAN GROUP XASX AUD	Real estate activities	3.23%	AU
AMERICAN HOMES 4 RENT- A XNYS USD	Financial service activities, except insurance and pension funding	3.22%	US
REALTY INCOME CORP XNYS USD	Real estate activities	3.15%	US
LINK REIT XHKG HKD	Real estate activities	3.12%	HK
SIMON PROPERTY GROUP INC XNYS USD	Real estate activities	2.84%	US
AMERICOLD REALTY TRUST INC XNYS USD	Real estate activities	2.83%	US
MITSUI FUDOSAN CO LTD XTKS JPY	Real estate activities	2.48%	JP
UDR INC XNYS USD	Real estate activities	2.39%	US
SUN COMMUNITIES INC XNYS USD	Real estate activities	2.36%	US
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	2.28%	FR

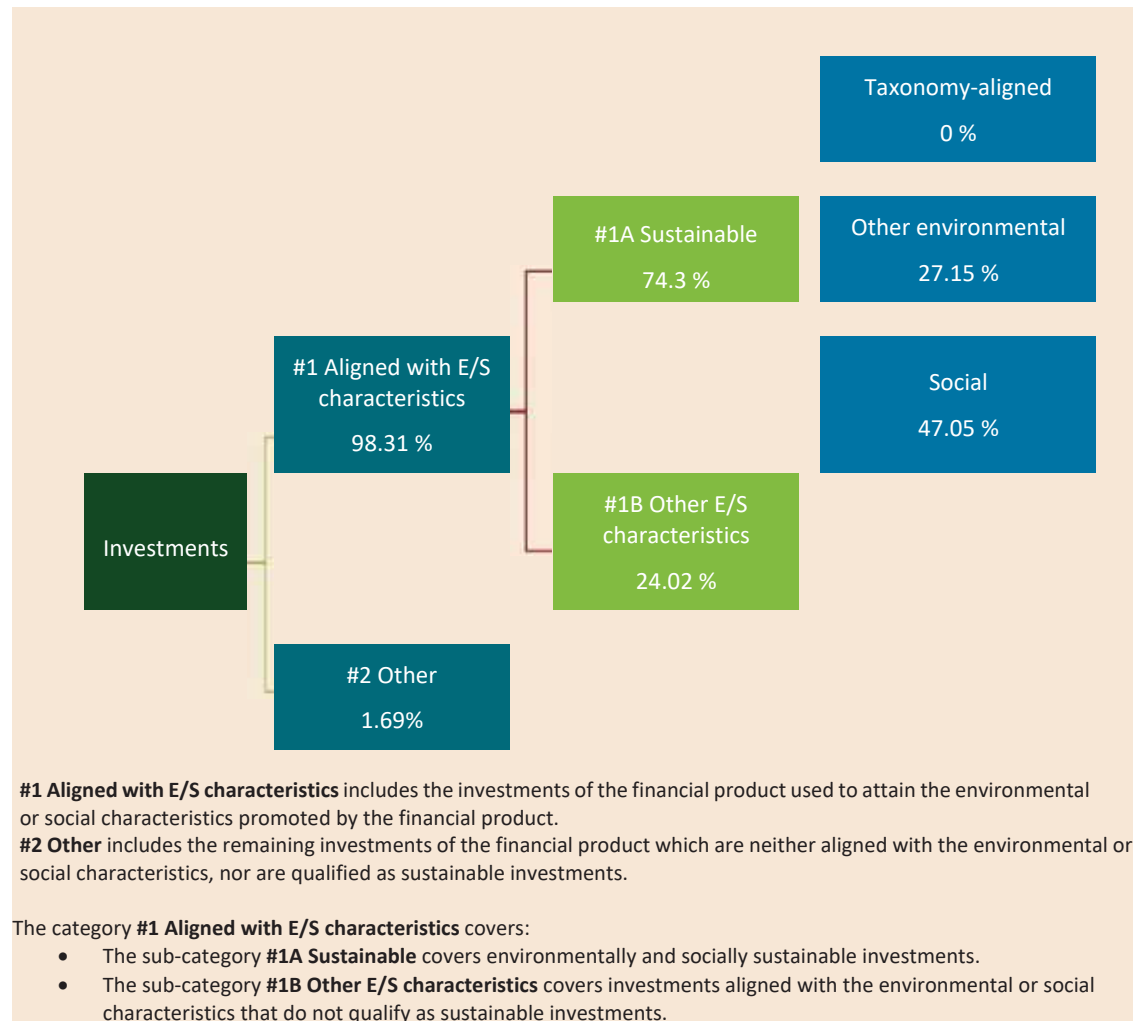

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Real estate activities	91.14%
Financial service activities, except insurance and pension funding	7.65%
Other	0.54%
Computer programming, consultancy and related activities	0.39%
Construction of buildings	0.28%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?**

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

Yes

In fossil gas In nuclear energy

No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 27.15% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 47.05% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 1.69% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity related instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to

attain the financial objective of the Financial Product and/or for diversification and/or hedging purposes.

Environmental or social safeguards are applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL RESPONSIBLE AGGREGATE (the "Financial Product") **Entity LEI:** 213800GCS8NNCKAOLA57

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="radio"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 29.1% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Women on board
- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has applied a socially responsible investment selectivity approach Best-in-class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Women on board and Carbon Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Women on board indicator and iii) 70% for the Carbon Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Women on board	35.85 % of women on board	34.97 % of women on board	94.57 %
Carbon Intensity	166.16 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	201.86 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.87 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Women on board	2022	34.15 % of women on board	33.64 % of women on board	94.1 %
Carbon Intensity	2022	170.69 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	251.93 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.65 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement

SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14.96%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	35.49
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 7982.05

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	55.6%
Financial service activities, except insurance and pension funding	13.7%
Other	5.74%
Electricity, gas, steam and air conditioning supply	3.12%
Land transport and transport via pipelines	2.06%
Activities of extraterritorial organisations and bodies	2%
Insurance, reinsurance and pension funding, except compulsory social security	2%
Activities auxiliary to financial services and insurance activities	1.7%
Real estate activities	1.66%
Telecommunications	1.66%
Manufacture of motor vehicles, trailers and semi-trailers	1.01%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.89%
Retail trade, except of motor vehicles and motorcycles	0.81%
Wholesale trade, except of motor vehicles and motorcycles	0.62%
Manufacture of food products	0.59%
Manufacture of computer, electronic and optical products	0.58%
Warehousing and support activities for transportation	0.57%
Publishing activities	0.51%
Manufacture of machinery and equipment n.e.c.	0.49%
Manufacture of paper and paper products	0.47%
Manufacture of chemicals and chemical products	0.45%
Extraction of crude petroleum and natural gas	0.44%
Manufacture of coke and refined petroleum products	0.39%
Rental and leasing activities	0.32%
Manufacture of beverages	0.31%
Other manufacturing	0.31%
Scientific research and development	0.22%
Waste collection, treatment and disposal activities; materials recovery	0.2%

Information service activities	0.2%
Human health activities	0.19%
Manufacture of rubber and plastic products	0.18%
Manufacture of electrical equipment	0.16%
Manufacture of other transport equipment	0.12%
Legal and accounting activities	0.12%
Advertising and market research	0.1%
Motion picture, video and television programme production, sound recording and music publishing activities	0.07%
Manufacture of basic metals	0.07%
Manufacture of other non-metallic mineral products	0.06%
Food and beverage service activities	0.05%
Computer programming, consultancy and related activities	0.05%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.03%
Water collection, treatment and supply	0.02%
Activities of head offices; management consultancy activities	0.02%
Air transport	0.02%
Civil engineering	0.02%
Accommodation	0.01%
Construction of buildings	0.01%
Manufacture of wearing apparel	0.01%
Sports activities and amusement and recreation activities	0.01%
Social work activities without accommodation	0.01%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 16.87% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 13.01% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 7.34% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL SHORT DURATION BONDS (the "Financial Product") **Entity LEI:** 2138009H1QMHB4JVF31

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 42.57% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.83 / 10	6.32 / 10	96.41 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	6.53 / 10	5.96 / 10	96.75 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 3280.333 Scope 2: 279.028 Scope 3: 19901.986 Scope 1+2: 3559.361 Scope 1+2+3: 23207.908
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 36.395 Scope 1+2+3: 282.796

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 3.38 Sector NACE D: 17.016 Sector NACE E: 0.667 Sector NACE G: 0.068 Sector NACE H: 2.002 Sector NACE L: 0.424
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	0.01

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.002
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.081

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	24.6 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	17.64%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	35.34
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 3280.333
Ecosystem protection & Deforestation policy			Scope 2: 279.028
			Scope 3: 19901.986
			Scope 1+2: 3559.361
			Scope 1+2+3: 23207.908
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 36.395

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	33.83%
Public administration and defence; compulsory social security	12.95%
Insurance, reinsurance and pension funding, except compulsory social security	7.56%
Real estate activities	5.83%
Manufacture of motor vehicles, trailers and semi-trailers	5.02%
Telecommunications	3.2%
Retail trade, except of motor vehicles and motorcycles	2.94%
Activities auxiliary to financial services and insurance activities	2.87%
Electricity, gas, steam and air conditioning supply	2.37%
Warehousing and support activities for transportation	2.13%
Other	1.9%
Accommodation	1.66%
Manufacture of paper and paper products	1.53%
Manufacture of chemicals and chemical products	1.39%
Activities of extraterritorial organisations and bodies	1.28%
Manufacture of computer, electronic and optical products	1.22%
Motion picture, video and television programme production, sound recording and music publishing activities	1.07%
Rental and leasing activities	0.91%
Land transport and transport via pipelines	0.82%
Manufacture of beverages	0.78%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.72%
Office administrative, office support and other business support activities	0.66%
Information service activities	0.62%
Gambling and betting activities	0.6%
Sports activities and amusement and recreation activities	0.59%
Manufacture of food products	0.57%
Services to buildings and landscape activities	0.56%
Manufacture of machinery and equipment n.e.c.	0.51%

Publishing activities	0.42%
Food and beverage service activities	0.4%
Water collection, treatment and supply	0.39%
Wholesale trade, except of motor vehicles and motorcycles	0.38%
Manufacture of basic metals	0.35%
Manufacture of rubber and plastic products	0.34%
Programming and broadcasting activities	0.33%
Extraction of crude petroleum and natural gas	0.32%
Other manufacturing	0.3%
Manufacture of other transport equipment	0.14%
Manufacture of coke and refined petroleum products	0.14%
Manufacture of electrical equipment	0.11%
Scientific research and development	0.1%
Crop and animal production, hunting and related service activities	0.09%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.09%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 14.64% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 24.58% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 5.26% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL STRATEGIC BONDS (the "Financial Product") Entity LEI: 213800DR687J9C7WK742

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.88% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.11 / 10	5.98 / 10	98.39 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	6.09 / 10	5.86 / 10	98.93 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 33250.184 Scope 2: 4598.044 Scope 3: 239210.891 Scope 1+2: 37848.227 Scope 1+2+3: 273599.5
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 87.751 Scope 1+2+3: 429.481
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 1867.324
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	8.64
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 67.38 Energy Production: 57.33
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE B: 1.424 Sector NACE C: 0.674 Sector NACE D: 7.606 Sector NACE F: 0.013 Sector NACE G: 0.347 Sector NACE H: 2.988 Sector NACE L: 0.251
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	2.64

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.029
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	59.661

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	20.68 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	18.12%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	33.34
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 33250.184
Ecosystem protection & Deforestation policy			Scope 2: 4598.044
			Scope 3: 239210.891
			Scope 1+2: 37848.227
			Scope 1+2+3: 273599.5
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 87.751
Ecosystem protection & Deforestation policy			Scope 1+2+3: 429.481
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1867.324
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	8.64
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 67.38 Energy Production: 57.33
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	2.64

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	33.34
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
T 1.125% - 15/02/2031	Public administration and defence; compulsory social security	2.77%	US
T 2% - 15/02/2050	Public administration and defence; compulsory social security	2.55%	US
UKT 4.25% - 07/06/2032	Public administration and defence; compulsory social security	2.44%	GB
T 1.25% - 15/05/2050	Public administration and defence; compulsory social security	2.39%	US
UKT 1% - 22/04/2024	Public administration and defence; compulsory social security	2.21%	GB
FRTR 0.1% - 01/03/2025 CPI	Public administration and defence; compulsory social security	1.94%	FR
UKTI 0.125% - 22/03/2026 CPI	Public administration and defence; compulsory social security	1.74%	GB
T 3% - 15/05/2047	Public administration and defence; compulsory social security	1.66%	US
TII 0.125% - 15/04/2025 CPI	Public administration and defence; compulsory social security	1.25%	US
T 2.5% - 15/02/2046	Public administration and defence; compulsory social security	1.16%	US
FRTR 0.25% - 25/11/2026	Public administration and defence; compulsory social security	1.01%	FR
Stand Alone 44621 GBP SET SSX	Other	0.94%	N/A
UKT 0.875% - 31/07/2033	Public administration and defence; compulsory social security	0.9%	GB
CBGLN 2% Var - 11/09/2031 Call	Financial service activities, except insurance and pension funding	0.88%	GB
BPCEGP 0.625% - 28/04/2025	Financial service activities, except insurance and pension funding	0.88%	FR

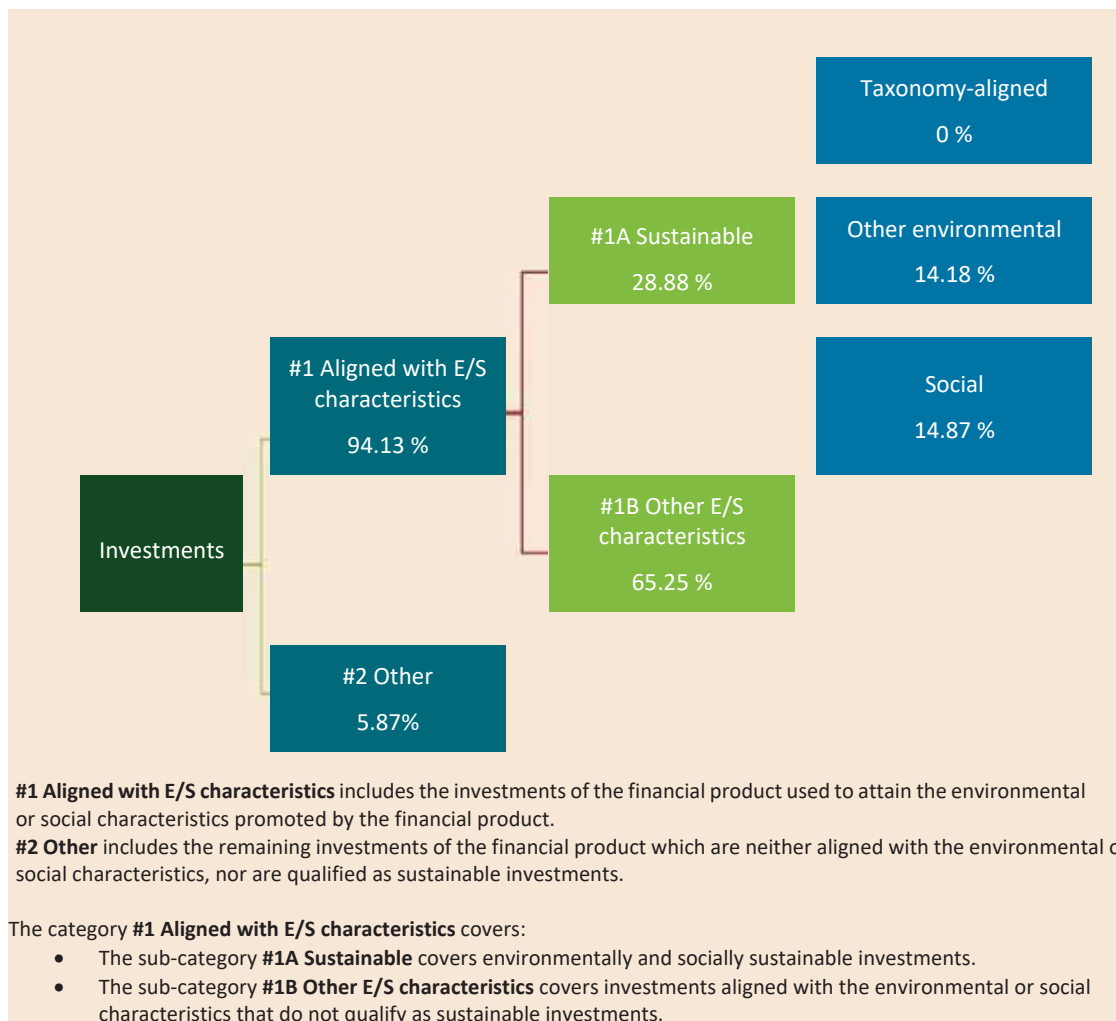

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	28.94%
Financial service activities, except insurance and pension funding	11.21%
Insurance, reinsurance and pension funding, except compulsory social security	5.89%
Real estate activities	4.85%
Manufacture of coke and refined petroleum products	4.09%
Electricity, gas, steam and air conditioning supply	3.51%
Land transport and transport via pipelines	3.3%
Other	3.24%
Manufacture of chemicals and chemical products	3.15%
Publishing activities	3.06%
Information service activities	2.59%
Telecommunications	1.93%
Activities auxiliary to financial services and insurance activities	1.55%
Manufacture of paper and paper products	1.38%
Human health activities	1.34%
Security and investigation activities	1.2%
Manufacture of food products	1.2%
Food and beverage service activities	1.11%
Warehousing and support activities for transportation	1.1%
Manufacture of machinery and equipment n.e.c.	1.07%
Office administrative, office support and other business support activities	1.05%
Manufacture of beverages	0.93%
Mining of metal ores	0.91%
Construction of buildings	0.8%
Accommodation	0.79%
Extraction of crude petroleum and natural gas	0.67%
Other manufacturing	0.65%
Manufacture of fabricated metal products, except machinery and equipment	0.63%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.6%

Gambling and betting activities	0.58%
Retail trade, except of motor vehicles and motorcycles	0.57%
Manufacture of motor vehicles, trailers and semi-trailers	0.51%
Services to buildings and landscape activities	0.47%
Advertising and market research	0.47%
Wholesale trade, except of motor vehicles and motorcycles	0.47%
Legal and accounting activities	0.46%
Water transport	0.46%
Rental and leasing activities	0.36%
Other personal service activities	0.34%
Civil engineering	0.32%
Mining support service activities	0.32%
Motion picture, video and television programme production, sound recording and music publishing activities	0.29%
Manufacture of electrical equipment	0.29%
Manufacture of computer, electronic and optical products	0.26%
Computer programming, consultancy and related activities	0.25%
Sports activities and amusement and recreation activities	0.24%
Waste collection, treatment and disposal activities; materials recovery	0.14%
Crop and animal production, hunting and related service activities	0.13%
Manufacture of other non-metallic mineral products	0.08%
Manufacture of leather and related products	0.08%
Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	0.08%
Manufacture of rubber and plastic products	0.06%
Manufacture of wearing apparel	0.03%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 14.18% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 14.87% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 5.87% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL SUSTAINABLE CREDIT BONDS (the "Financial Product") **Entity LEI:** 213800MSRGNLXW4KB32

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<p>●● <input type="checkbox"/> YES</p> <p><input type="checkbox"/> It made sustainable investments with an environmental objective: ___%</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made sustainable investments with a social objective: ___%</p>	<p>● <input checked="" type="checkbox"/> NO</p> <p><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 56.93% of sustainable investments</p> <p><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Women on board
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Women on board and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Women on board indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Women on board	36.52 % of women on board	35.43 % of women on board	96.25 %
Water Intensity	6245.02 Thousands of cubic meters for corporates	10592.98 Thousands of cubic meters for corporates	96.73 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Women on board	2022	35.74 % of women on board	34.15 % of women on board	97.37 %
Water intensity	2022	13410.32 Thousands of cubic meters for corporates	21828.76 Thousands of cubic meters for corporates	97.87 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 909.432 Scope 2: 176.232 Scope 3: 6098.343 Scope 1+2: 1085.664 Scope 1+2+3: 7160.599

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 909.432
Ecosystem protection & Deforestation policy			Scope 2: 176.232 Scope 3: 6098.343 Scope 1+2: 1085.664 Scope 1+2+3: 7160.599
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 63.206
Ecosystem protection & Deforestation policy			Scope 1+2+3: 396.987
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 2014.804
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	12.67
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 68.43 Energy Production: 70.22
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	2.48

ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	34.61
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
SA 37815 USD Settlement Acc at SSX	Other	2.71%	N/A
SA 37811 USD Settlement Acc at SSX	Other	2.48%	N/A
SA 37815 EUR SMN GSI	Other	1.99%	N/A
JPM 3.509% Var - 23/01/2029 Call	Financial service activities, except insurance and pension funding	1.49%	US
NXPI 2.7% - 01/05/2025 Call	Manufacture of computer, electronic and optical products	1.41%	NL
GS 1.948% Var - 21/10/2027 Call	Activities auxiliary to financial services and insurance activities	1.35%	US
BAC 2.456% Var - 22/10/2025 Call	Financial service activities, except insurance and pension funding	1.31%	US
DB 1.875% Var - 23/02/2028 Call	Financial service activities, except insurance and pension funding	1.21%	DE
DE 4.85% - 11/10/2029	Manufacture of machinery and equipment n.e.c.	1.16%	US
STLD 5% - 15/12/2026 Call	Manufacture of basic metals	1.14%	US
SA 37814 EUR Settlement Acc at SSX	Other	1.1%	N/A
WM 4.15% - 15/04/2032 Call	Waste collection, treatment and disposal activities; materials recovery	1.07%	US

CRBG 3.65% - 05/04/2027 Call	Insurance, reinsurance and pension funding, except compulsory social security	1.06%	US
ATO 5.45% - 15/10/2032 Call	Electricity, gas, steam and air conditioning supply	1.05%	US
BFCM 4.524% - 13/07/2025	Financial service activities, except insurance and pension funding	0.98%	FR

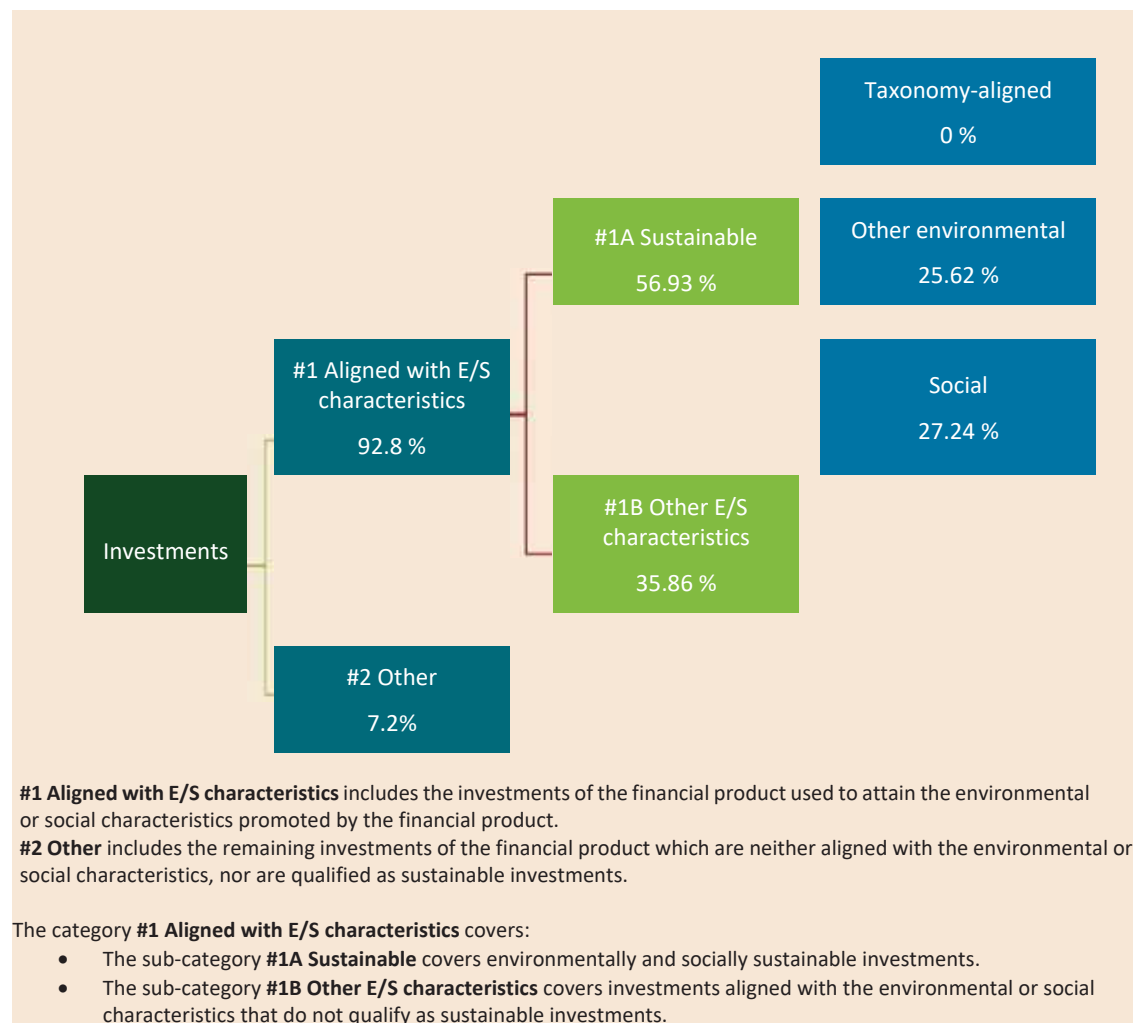

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	28.27%
Electricity, gas, steam and air conditioning supply	10.58%
Other	6.61%
Insurance, reinsurance and pension funding, except compulsory social security	5.97%
Real estate activities	5.39%
Activities auxiliary to financial services and insurance activities	5.02%
Land transport and transport via pipelines	3.92%
Telecommunications	3.52%
Retail trade, except of motor vehicles and motorcycles	2.87%
Manufacture of computer, electronic and optical products	2.36%
Manufacture of machinery and equipment n.e.c.	2.02%
Extraction of crude petroleum and natural gas	1.97%
Manufacture of motor vehicles, trailers and semi-trailers	1.59%
Publishing activities	1.46%
Waste collection, treatment and disposal activities; materials recovery	1.45%
Other manufacturing	1.45%
Manufacture of food products	1.42%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.39%
Information service activities	1.33%
Manufacture of chemicals and chemical products	1.27%
Wholesale trade, except of motor vehicles and motorcycles	1.24%
Warehousing and support activities for transportation	1.22%
Manufacture of basic metals	1.14%
Manufacture of beverages	1.05%
Rental and leasing activities	0.88%
Manufacture of paper and paper products	0.75%
Manufacture of coke and refined petroleum products	0.69%
Motion picture, video and television programme production, sound recording and music publishing activities	0.57%

Scientific research and development	0.54%
Human health activities	0.45%
Legal and accounting activities	0.41%
Accommodation	0.36%
Manufacture of other transport equipment	0.33%
Manufacture of rubber and plastic products	0.33%
Manufacture of electrical equipment	0.09%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.09%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 25.62% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 27.24% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 7.2% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - INFLATION PLUS Entity LEI: 213800SEIJNDIJ1AQP03 PLUS (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 11.04% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.34 / 10	6.07 / 10	99.86 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	6.35 / 10	6.06 / 10	99.73 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 337.89 Scope 2: 39.823 Scope 3: 3783.917 Scope 1+2: 377.713 Scope 1+2+3: 4059.51
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 16.499 Scope 1+2+3: 22.183
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 882
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	1.69

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.062 Sector NACE D: 2.499 Sector NACE F: 0.169 Sector NACE G: 0.019 Sector NACE H: 1.171 Sector NACE L: 0.227
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	1.38
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	N/A
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.016

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	1 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.2%
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	41.62
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 337.89
Ecosystem protection & Deforestation policy			Scope 2: 39.823 Scope 3: 3783.917 Scope 1+2: 377.713 Scope 1+2+3: 4059.51
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 16.499
Ecosystem protection & Deforestation policy			Scope 1+2+3: 22.183
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 882
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	1.69
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	1.38
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
UKTI 0.125% - 22/03/2026 CPI	Public administration and defence; compulsory social security	14.53%	GB
DBRI 0.1% - 15/04/2026 CPI	Public administration and defence; compulsory social security	9.65%	DE
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	7.59%	FR
FRTR 1.85% - 25/07/2027 CPI	Public administration and defence; compulsory social security	7.45%	FR

FRTR 0.1% - 01/03/2026 CPI	Public administration and defence; compulsory social security	5.81%	FR
TII 0.375% - 15/07/2025 CPI	Public administration and defence; compulsory social security	4.43%	US
UKTI 0.125% - 22/03/2024 CPI	Public administration and defence; compulsory social security	4.19%	GB
SPGBEI 0.65% - 30/11/2027 CPI	Public administration and defence; compulsory social security	4.14%	ES
TII 0.125% - 15/04/2025 CPI	Public administration and defence; compulsory social security	3.11%	US
FRTR 0.25% - 25/07/2024 CPI	Public administration and defence; compulsory social security	2.99%	FR
SPGBEI 1.8% - 30/11/2024 CPI	Public administration and defence; compulsory social security	2.96%	ES
TII 2.375% - 15/01/2025 CPI	Public administration and defence; compulsory social security	2.92%	US
BTPS 0.65% - 15/05/2026 CPI	Public administration and defence; compulsory social security	2.6%	IT
TII 1.25% - 15/04/2028 CPI	Public administration and defence; compulsory social security	2.35%	US
BTPS 1.3% - 15/05/2028 CPI	Public administration and defence; compulsory social security	2.26%	IT

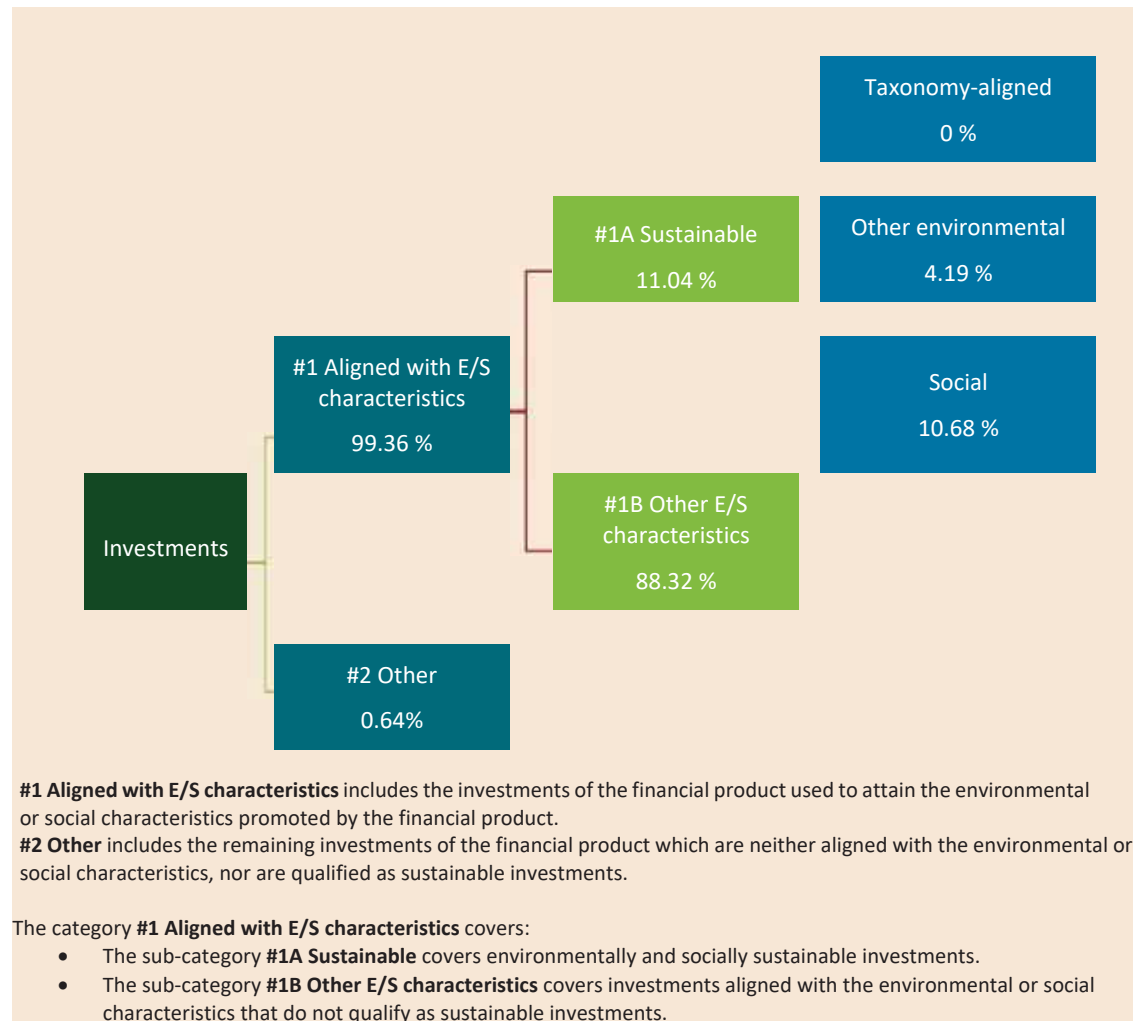

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Public administration and defence; compulsory social security	86.71%
Financial service activities, except insurance and pension funding	9.55%
Activities of extraterritorial organisations and bodies	2.07%
Electricity, gas, steam and air conditioning supply	0.79%
Other	0.31%
Scientific research and development	0.22%
Insurance, reinsurance and pension funding, except compulsory social security	0.18%
Warehousing and support activities for transportation	0.07%
Manufacture of motor vehicles, trailers and semi-trailers	0.07%
Rental and leasing activities	0.04%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

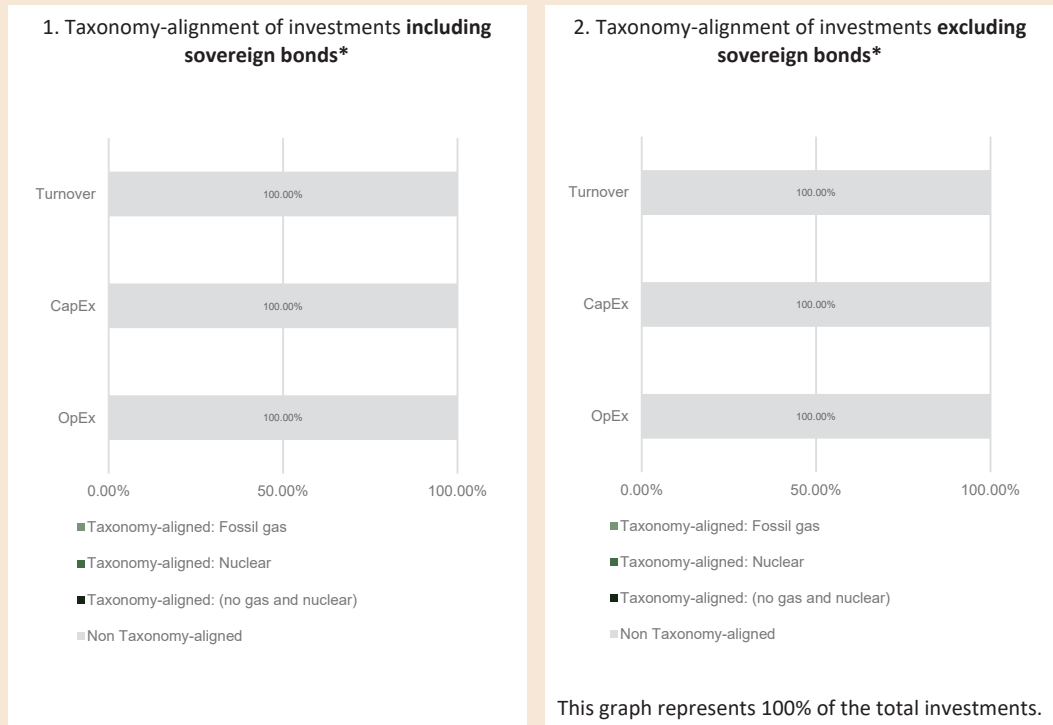

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 4.19% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 10.68% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 0.64% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ITALY EQUITY (the "Financial Product")

Entity LEI: 213800LNEKJGN8QM7D48

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 68.25% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	176.41 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	185.02 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.28 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	226.13 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	267.01 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.12 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 3317.945 Scope 2: 713.518 Scope 3: 79062.242 Scope 1+2: 4031.463 Scope 1+2+3: 83079.766

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.604

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	11.12 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	10.65%
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	43.68
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 3317.945
Ecosystem protection & Deforestation policy			Scope 2: 713.518

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

			Scope 3: 79062.242 Scope 1+2: 4031.463 Scope 1+2+3: 83079.766
Climate Risk policy	Ecosystem protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)
Climate Risk policy	Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue
Ecosystem protection & Deforestation policy			
Climate Risk policy		PAI 4: Exposure to companies active in the fossil fuel sector	% of investments
Ecosystem protection & Deforestation policy		PAI 7: activities negatively affecting biodiversity sensitive area	% of investments
ESG standard policy / violation of international norms and standards		PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments
Controversial weapons policy		PAI 14: Exposure to controversial weapons	% of investments

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
ENEL SPA MTAA EUR	Electricity, gas, steam and air conditioning supply	9.74%	IT
INTESA SANPAOLO MTAA EUR	Financial service activities, except insurance and pension funding	9.5%	IT
FINECOBANK SPA MTAA EUR	Financial service activities, except insurance and pension funding	7.5%	IT
STMICROELECTRONICS NV MTAA EUR	Manufacture of computer, electronic and optical products	5.92%	FR
STELLANTIS NV MTAA EUR	Manufacture of motor vehicles, trailers and semi-trailers	5.36%	NL
PRYSMIAN SPA MTAA EUR	Manufacture of electrical equipment	4.92%	IT

TERNA-RETE ELETTRICA NAZIONALE MTAA EUR	Electricity, gas, steam and air conditioning supply	4.28%	IT
BPER BANCA MTAA EUR	Financial service activities, except insurance and pension funding	4.24%	IT
MEDIOBANCA SPA MTAA EUR	Financial service activities, except insurance and pension funding	3.92%	IT
ERG SPA MTAA EUR	Electricity, gas, steam and air conditioning supply	3.87%	IT
CNH INDUSTRIAL NV MTAA EUR	Manufacture of machinery and equipment n.e.c.	3.49%	GB
NEXI SPA MTAA EUR	Activities auxiliary to financial services and insurance activities	3.16%	IT
INTERPUMP GROUP SPA MTAA EUR	Manufacture of machinery and equipment n.e.c.	2.87%	IT
TECHNOPROBE SPA MTAA EUR	Manufacture of machinery and equipment n.e.c.	2.52%	IT
BANCO BPM SPA MTAA EUR	Financial service activities, except insurance and pension funding	1.97%	IT

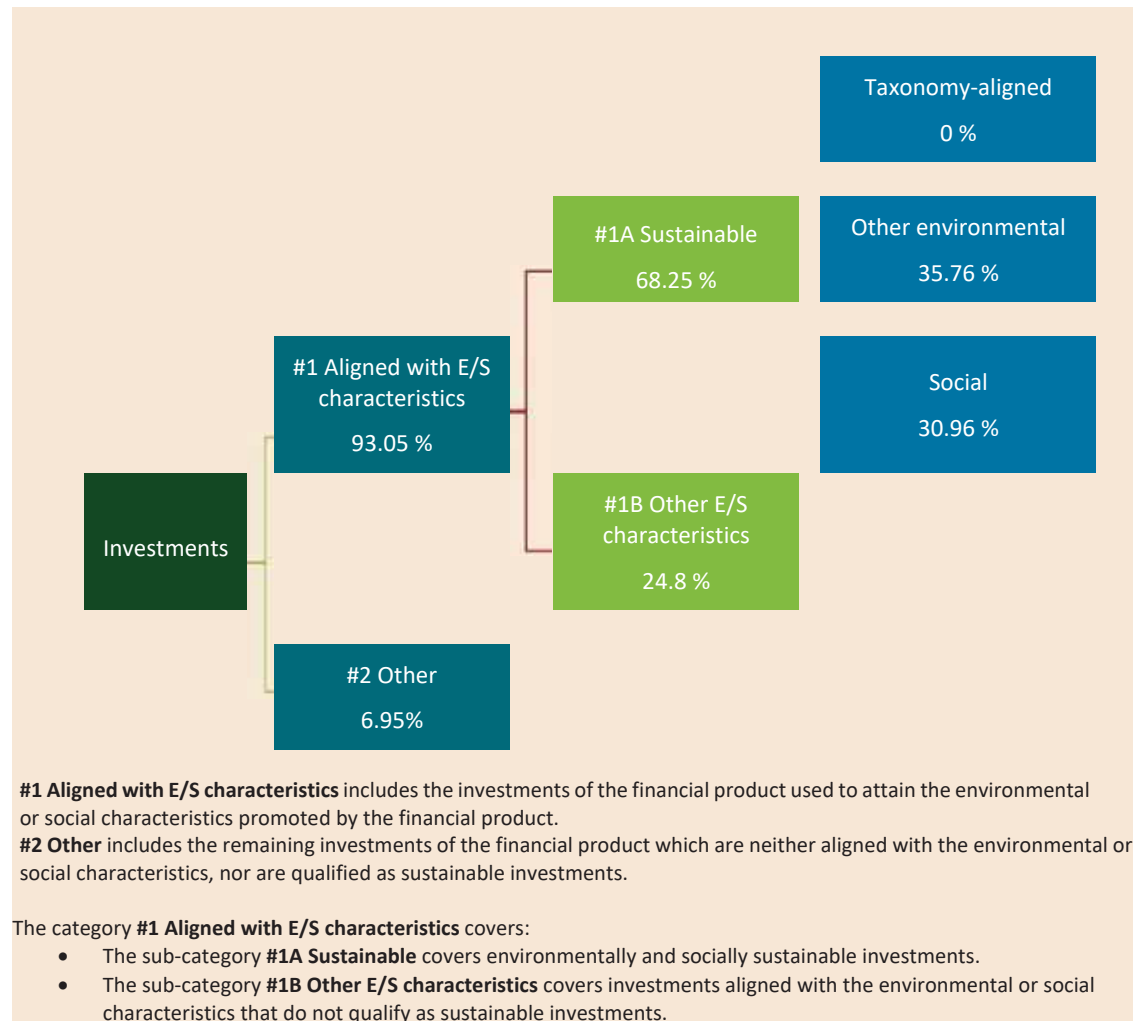

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	31.66%
Electricity, gas, steam and air conditioning supply	19.03%
Manufacture of machinery and equipment n.e.c.	10.23%
Manufacture of electrical equipment	6.85%
Manufacture of motor vehicles, trailers and semi-trailers	6.79%
Manufacture of computer, electronic and optical products	5.92%
Activities auxiliary to financial services and insurance activities	3.16%
Publishing activities	2.59%
Wholesale trade, except of motor vehicles and motorcycles	2.23%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.14%
Computer programming, consultancy and related activities	1.46%
Other manufacturing	1.41%
Manufacture of chemicals and chemical products	1.28%
Motion picture, video and television programme production, sound recording and music publishing activities	1.25%
Manufacture of leather and related products	0.97%
Manufacture of wearing apparel	0.86%
Manufacture of food products	0.63%
Real estate activities	0.52%
Information service activities	0.38%
Other	0.32%
Manufacture of other transport equipment	0.27%
Manufacture of beverages	0.05%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 35.76% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 30.96% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 6.95% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - LONGEVITY ECONOMY Entity LEI: 213800DW4R9H3NOZT149
ECONOMY (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 79.84% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	80.5 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	173.19 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Water Intensity	1547.15 Thousands of cubic meters for corporates	5549.86 Thousands of cubic meters for corporates	100 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	75.9 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	238.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Water intensity	2022	897.18 Thousands of cubic meters for corporates	11618.89 Thousands of cubic meters for corporates	100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 1160.361 Scope 2: 1158.441 Scope 3: 13031.277 Scope 1+2: 2318.802 Scope 1+2+3: 15062.557
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 6.843 Scope 1+2+3: 40.057
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 314.841
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	N/A
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 65.79

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.279 Sector NACE G: 0.011 Sector NACE H: 6.36
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	N/A
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.001
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.046

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	62.03 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	13.19%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	34.2
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 1160.361
Ecosystem protection & Deforestation policy			Scope 2: 1158.441
			Scope 3: 13031.277
			Scope 1+2: 2318.802
			Scope 1+2+3: 15062.557
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 6.843
Ecosystem protection & Deforestation policy			Scope 1+2+3: 40.057
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 314.841
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	N/A
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 65.79
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	N/A
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	34.2
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies

may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
LVMH MOET HENNESSY LOUIS VUI XPAR EUR	Manufacture of leather and related products	2.88%	FR
AMERICAN EXPRESS CO XNYS USD	Financial service activities, except insurance and pension funding	2.86%	US
Portfolio USD SET SSD	Other	2.79%	N/A

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Activities auxiliary to financial services and insurance activities	12.68%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	11.66%
Manufacture of computer, electronic and optical products	9.69%
Other manufacturing	9.67%
Insurance, reinsurance and pension funding, except compulsory social security	7.96%
Manufacture of paper and paper products	5.9%
Sports activities and amusement and recreation activities	4.65%
Retail trade, except of motor vehicles and motorcycles	4.02%
Human health activities	3.41%
Other	3.28%
Manufacture of wearing apparel	2.9%
Manufacture of leather and related products	2.88%
Financial service activities, except insurance and pension funding	2.86%
Publishing activities	2.81%
Scientific research and development	2.75%
Other personal service activities	2.54%
Information service activities	2.49%
Gambling and betting activities	1.95%
Water transport	1.82%
Wholesale trade, except of motor vehicles and motorcycles	1.52%
Manufacture of chemicals and chemical products	1.3%
Education	1.24%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 30.24% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 54.89% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 4.23% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - METAVERSE Entity LEI: 2138008QSRWTI31JOZ48 (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 60.26% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	41.02 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	173.19 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.31 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	43.54 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	238.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.99 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

- the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively

- overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 42.693 Scope 2: 92.163 Scope 3: 6138.3 Scope 1+2: 134.856 Scope 1+2+3: 6225.443
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 3.261 Scope 1+2+3: 125.669
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 1590.954
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	N/A
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 50.37
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.088 Sector NACE G: 0.075 Sector NACE L: 0.429
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	N/A
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	N/A
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.029

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	59.85 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	17.03%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	32.68
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 42.693 Scope 2: 92.163 Scope 3: 6138.3
Ecosystem protection & Deforestation policy			Scope 1+2: 134.856 Scope 1+2+3: 6225.443
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 3.261 Scope 1+2+3: 125.669
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1590.954
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	N/A
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 50.37
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	N/A
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	32.68
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	5.7%	US

Portfolio 97382 USD SET SSX	Other	4.79%	N/A
MICROSOFT CORP XNGS USD	Publishing activities	3.55%	US
PENUMBRA INC XNYS USD	Manufacture of computer, electronic and optical products	3.44%	US
ROBLOX CORP -CLASS A XNYS USD	Publishing activities	3.01%	US
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	2.97%	US
CADENCE DESIGN SYS INC XNGS USD	Publishing activities	2.9%	US
SIEMENS AG-REG XETR EUR	Manufacture of electrical equipment	2.75%	DE
SYNOPSYS INC XNGS USD	Publishing activities	2.74%	US
ADOBE INC XNGS USD	Publishing activities	2.63%	US
ALPHABET INC-CL C XNGS USD	Information service activities	2.61%	US
SONY GROUP CORP XTKS JPY	Manufacture of computer, electronic and optical products	2.5%	JP
AUTODESK INC XNGS USD	Publishing activities	2.44%	US
ADVANCED MICRO DEVICES XNGS USD	Manufacture of computer, electronic and optical products	2.38%	US
ALTAIR ENGINEERING INC - A XNGS USD	Publishing activities	2.31%	US

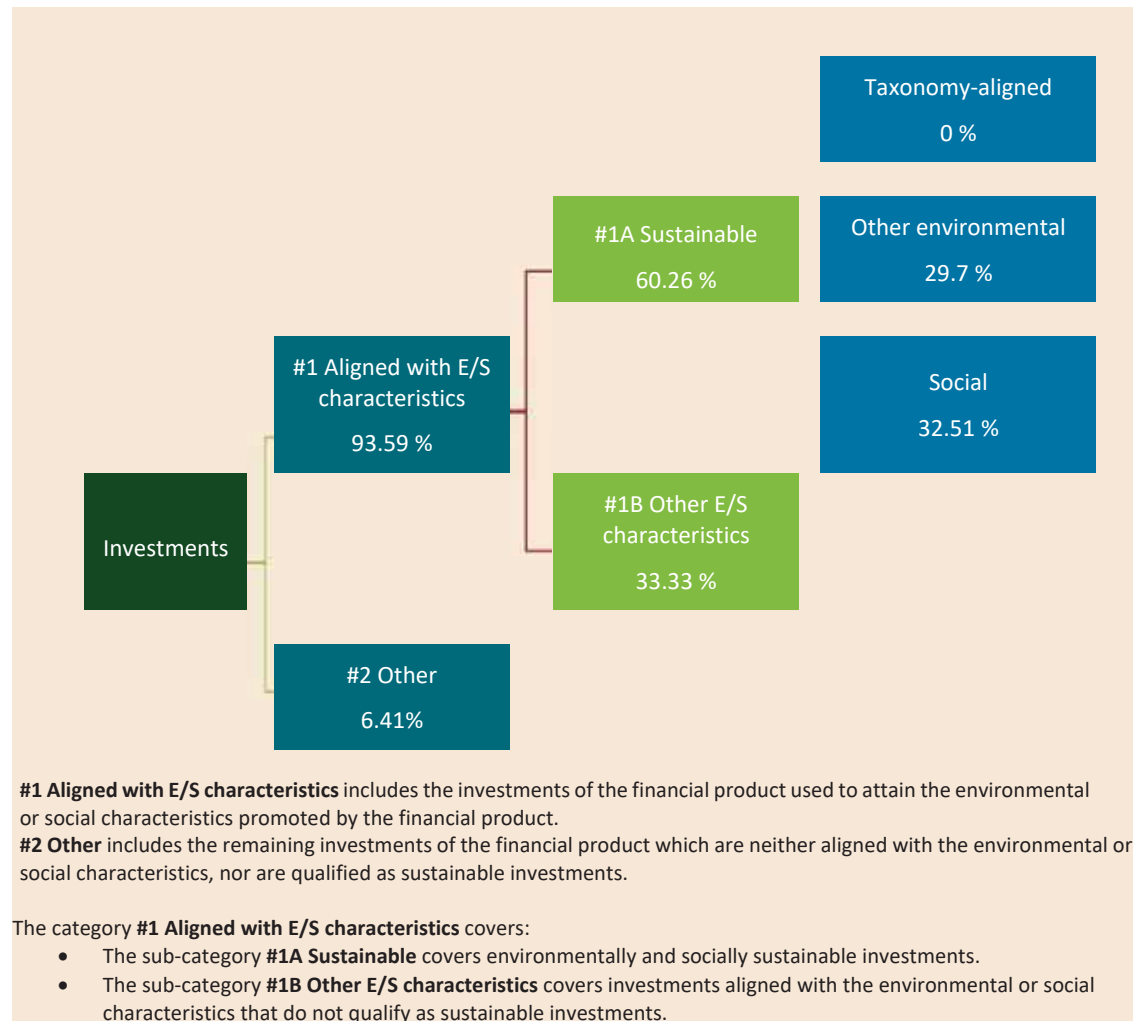

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Publishing activities	40.95%
Manufacture of computer, electronic and optical products	23.79%
Information service activities	8.13%
Manufacture of machinery and equipment n.e.c.	8.1%
Other	4.81%
Manufacture of leather and related products	3.04%
Manufacture of electrical equipment	2.75%
Retail trade, except of motor vehicles and motorcycles	2.48%
Motion picture, video and television programme production, sound recording and music publishing activities	2.1%
Activities auxiliary to financial services and insurance activities	1.91%
Real estate activities	1.71%
Other manufacturing	0.24%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 29.7% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 32.51% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 6.41% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - NEXT GENERATION (the "Financial Product")

Entity LEI: 213800W4SU2RSMIF6142

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

NO

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 54.17% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their G score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	87.46 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	237.99 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.6 %
Water Intensity	686.06 Thousands of cubic meters for corporates	12291.13 Thousands of cubic meters for corporates	97.97 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	225.53 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	283.26 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.39 %
Water intensity	2022	605.69 Thousands of cubic meters for corporates	15009.05 Thousands of cubic meters for corporates	98.39 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 1192.926 Scope 2: 1092.651 Scope 3: 58680.734 Scope 1+2: 2285.577 Scope 1+2+3: 60596.094

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	64.61 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14.84%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	33.67
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 1192.926

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies

may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
ICON PLC XNGS USD	Human health activities	3.28%	IE
NOVANTA INC XNGS USD	Manufacture of electrical equipment	3.18%	US
CYBERARK SOFTWARE LTD/ISRAEL XNGS USD	Publishing activities	2.95%	IL
TETRA TECH INC XNGS USD	Other professional, scientific and technical activities	2.66%	US
BADGER METER INC XNYS USD	Manufacture of computer, electronic and optical products	2.63%	US
WORKIVA INC XNYS USD	Publishing activities	2.63%	US
EDENRED XPAR EUR	Office administrative, office support and other business support activities	2.24%	FR
INSTRUCTURE HOLDINGS INC XNYS USD	Publishing activities	2.12%	US
MGP INGREDIENTS INC XNGS USD	Manufacture of beverages	2.08%	US
TONGCHENG TRAVEL HOLDINGS LT XHKG HKD	Information service activities	2.07%	CN
CERTARA INC XNGS USD	Scientific research and development	2.03%	US
S.O.I.T.E.C. XPAR EUR	Manufacture of machinery and equipment n.e.c.	2.03%	FR
FINECOBANK SPA MTAA EUR	Financial service activities, except insurance and pension funding	2.01%	IT
QUEBECOR INC -CL B XTSE CAD	Telecommunications	1.97%	CA
TECHNOPROBE SPA MTAA EUR	Manufacture of machinery and equipment n.e.c.	1.96%	IT

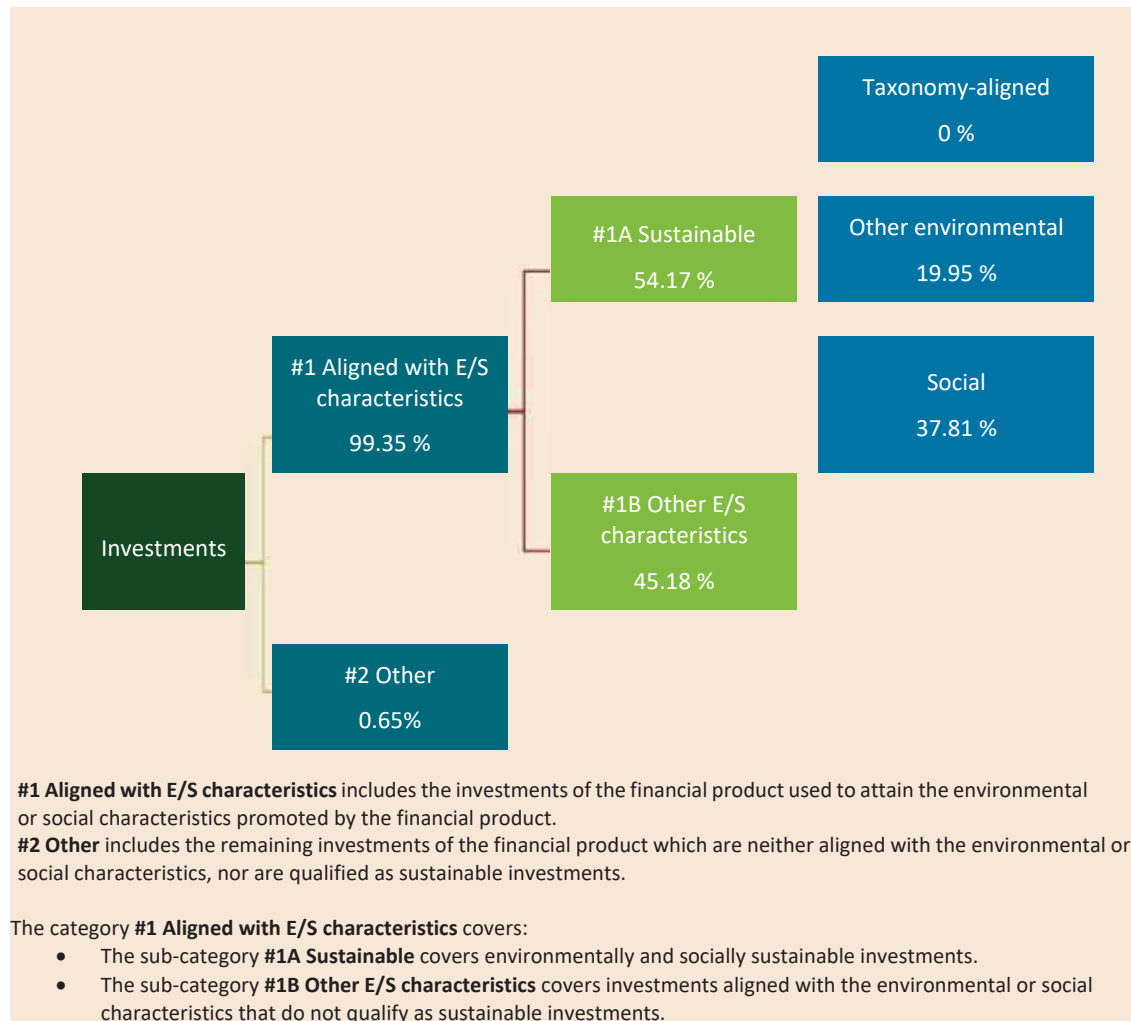

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Publishing activities	17.98%
Manufacture of machinery and equipment n.e.c.	8.87%
Manufacture of computer, electronic and optical products	7.79%
Financial service activities, except insurance and pension funding	7.44%
Manufacture of electrical equipment	6.5%
Information service activities	4.94%
Manufacture of motor vehicles, trailers and semi-trailers	3.59%
Human health activities	3.28%
Office administrative, office support and other business support activities	3.25%
Activities auxiliary to financial services and insurance activities	2.87%
Other professional, scientific and technical activities	2.66%
Other manufacturing	2.62%
Real estate activities	2.43%
Architectural and engineering activities; technical testing and analysis	2.13%
Manufacture of beverages	2.08%
Scientific research and development	2.03%
Public administration and defence; compulsory social security	2%
Telecommunications	1.97%
Education	1.86%
Electricity, gas, steam and air conditioning supply	1.67%
Postal and courier activities	1.49%
Advertising and market research	1.44%
Civil engineering	1.44%
Manufacture of fabricated metal products, except machinery and equipment	1.34%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.33%
Manufacture of food products	1.14%
Manufacture of chemicals and chemical products	1.05%
Retail trade, except of motor vehicles and motorcycles	0.79%
Other	0.62%

Insurance, reinsurance and pension funding, except compulsory social security	0.58%
Manufacture of paper and paper products	0.37%
Security and investigation activities	0.28%
Warehousing and support activities for transportation	0.18%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 19.95% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 37.81% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 0.65% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - OPTIMAL INCOME (the "Financial Product") Entity LEI: 2138003LHHRO8T77DX76

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 63.69% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Women on Board

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Women on Board during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Women on Board indicator.

Sustainability KPI Name	Value	Investment Universe	Coverage
Carbon intensity	176.02 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	207.46 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	96.87 %
Women on Board	40.92 % of women on board	35.57 % of women on board	94.51 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Investment Universe	Coverage
Carbon intensity	2022	186.5 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	265.32 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.82 %
Women on Board	2022	40.34 % of women on board	34.65 % of women on board	95.44 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. **Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:**

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 15978.828
Ecosystem protection & Deforestation policy			Scope 2: 6658.299 Scope 3: 321367.188 Scope 1+2: 22637.125 Scope 1+2+3: 343481
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 57.009
Ecosystem protection & Deforestation policy			Scope 1+2+3: 761.924

Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	5.2
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	40.69
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	4.17%	NL
AXA WF Global Emerging Markets Bonds M (H) Capital	Financial service activities, except insurance and pension funding	2.56%	LU
AIR LIQUIDE SA-PF EUR	Manufacture of chemicals and chemical products	2.5%	FR
PF 3751 EUR Settlement Acc at SSX	Other	2.08%	N/A
REMY COINTREAU XPAR EUR	Manufacture of beverages	1.91%	FR
AIR LIQUIDE SA-PF-2024 EUR	Manufacture of chemicals and chemical products	1.82%	FR
AXA WF Inflation Plus M Capitalisation EUR	Financial service activities, except insurance and pension funding	1.78%	LU
ROCHE HOLDING AG-GENUSSCHEIN XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.63%	CH
AXA WF Next Generation M Capitalisation USD	Financial service activities, except insurance and pension funding	1.62%	LU
BANCO BILBAO VIZCAYA ARGENTA XMAD EUR	Financial service activities, except insurance and pension funding	1.59%	ES
FINECOBANK SPA MTAA EUR	Financial service activities, except insurance and pension funding	1.48%	IT
VOLVO AB-B SHS XSTO SEK	Manufacture of motor vehicles, trailers and semi-trailers	1.43%	SE

NESTLE SA-REG XSWX CHF	Manufacture of food products	1.41%	CH
STELLANTIS NV XPAR EUR	Manufacture of motor vehicles, trailers and semi-trailers	1.35%	NL
EDENRED XPAR EUR	Office administrative, office support and other business support activities	1.35%	FR

The portfolio proportions of investments presented above are an average over the reference period.

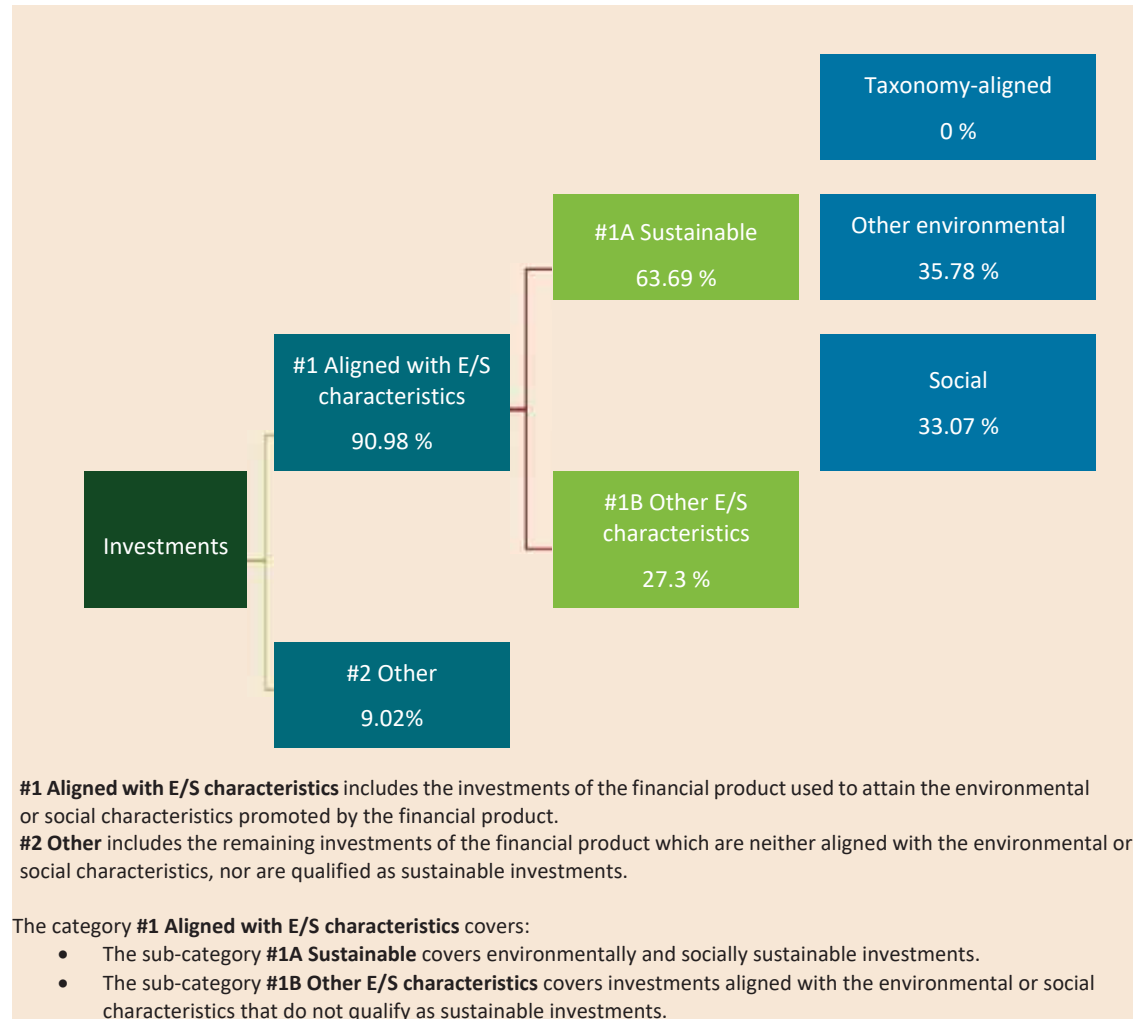

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation

describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	26.39%
Manufacture of chemicals and chemical products	6.65%
Manufacture of machinery and equipment n.e.c.	6.12%
Other	5.43%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.29%
Manufacture of motor vehicles, trailers and semi-trailers	4.92%
Electricity, gas, steam and air conditioning supply	3.98%
Manufacture of beverages	3.84%
Manufacture of coke and refined petroleum products	3.63%
Real estate activities	2.73%
Public administration and defence; compulsory social security	2.47%
Manufacture of electrical equipment	2.45%
Insurance, reinsurance and pension funding, except compulsory social security	2.22%
Publishing activities	2.12%
Telecommunications	2%
Office administrative, office support and other business support activities	1.98%
Manufacture of food products	1.58%
Other manufacturing	1.58%
Civil engineering	1.26%
Manufacture of leather and related products	1.24%
Information service activities	1.21%
Manufacture of other transport equipment	1.18%
Manufacture of rubber and plastic products	1.05%
Retail trade, except of motor vehicles and motorcycles	1.05%
Computer programming, consultancy and related activities	0.95%
Warehousing and support activities for transportation	0.77%
Advertising and market research	0.74%
Manufacture of computer, electronic and optical products	0.65%
Activities auxiliary to financial services and insurance activities	0.64%

Motion picture, video and television programme production, sound recording and music publishing activities	0.47%
Manufacture of other non-metallic mineral products	0.4%
Postal and courier activities	0.36%
Rental and leasing activities	0.32%
Mining of metal ores	0.29%
Water collection, treatment and supply	0.28%
Land transport and transport via pipelines	0.26%
Waste collection, treatment and disposal activities; materials recovery	0.23%
Air transport	0.22%
Scientific research and development	0.22%
Food and beverage service activities	0.2%
Wholesale trade, except of motor vehicles and motorcycles	0.18%
Human health activities	0.14%
Manufacture of wearing apparel	0.11%
Architectural and engineering activities; technical testing and analysis	0.04%
Accommodation	0.03%
Manufacture of paper and paper products	0.02%
Gambling and betting activities	0.02%
Construction of buildings	0.02%
Legal and accounting activities	0.02%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 35.78% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 33.07% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 9.02% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ROBOTECH Entity LEI: 213800CU3X4UQM7PY924 (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 71.83% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	79.52 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	173.19 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	97.24 %
Water Intensity	278.44 Thousands of cubic meters for corporates	5549.86 Thousands of cubic meters for corporates	97.24 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	95.78 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	238.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	97.24 %
Water intensity	2022	472.75 Thousands of cubic meters for corporates	11618.89 Thousands of cubic meters for corporates	97.24 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 4619.433 Scope 2: 4838.446 Scope 3: 358178.625 Scope 1+2: 9457.879 Scope 1+2+3: 365431.5
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 7.719 Scope 1+2+3: 339.018

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	59.31 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.95%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	29.02
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 4619.433

ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	29.02
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies

may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
INTUITIVE SURGICAL INC XNGS USD	Other manufacturing	4.54%	US
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	3.91%	US
DEXCOM INC XNGS USD	Other manufacturing	3.59%	US
KEYENCE CORP XTKS JPY	Manufacture of machinery and equipment n.e.c.	3.48%	JP
SIEMENS AG-REG XETR EUR	Manufacture of electrical equipment	3.48%	DE
CADENCE DESIGN SYS INC XNGS USD	Publishing activities	3.42%	US
Portfolio USD SET SSX	Other	3.26%	N/A
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	2.87%	US
ALPHABET INC-CL C XNGS USD	Information service activities	2.66%	US
THERMO FISHER SCIENTIFIC INC XNYS USD	Manufacture of computer, electronic and optical products	2.6%	US
FANUC CORP XTKS JPY	Manufacture of machinery and equipment n.e.c.	2.55%	JP
TERADYNE INC XNGS USD	Manufacture of machinery and equipment n.e.c.	2.52%	US
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	2.5%	FR
ADVANCED MICRO DEVICES XNGS USD	Manufacture of computer, electronic and optical products	2.4%	US
TAIWAN SEMICONDUCTOR-SP ADR XNYS USD	Manufacture of machinery and equipment n.e.c.	2.32%	TW

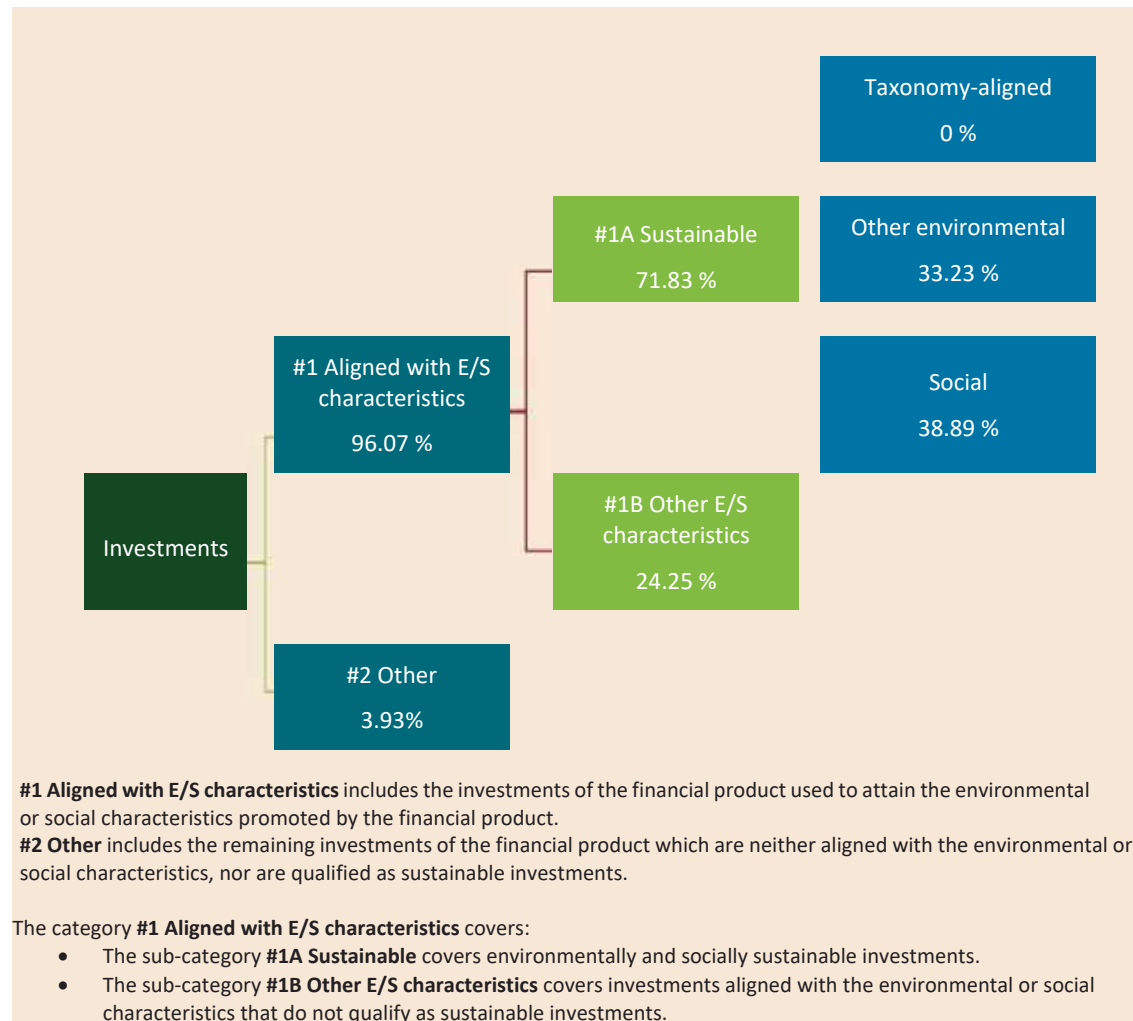

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of computer, electronic and optical products	31.63%
Manufacture of machinery and equipment n.e.c.	22.59%
Publishing activities	12.14%
Other manufacturing	11.3%
Manufacture of electrical equipment	9.33%
Other	3.29%
Retail trade, except of motor vehicles and motorcycles	3.01%
Manufacture of motor vehicles, trailers and semi-trailers	2.67%
Information service activities	2.66%
Office administrative, office support and other business support activities	1.39%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 33.23% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 38.89% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 3.93% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - SELECTIV' Entity LEI: 2138007UJLE7MEGJLU10
INFRASTRUCTURE (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 84.28% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Women on board
- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
Women on board	38.45 % of women on board	34.98 % of women on board	95.36 %
Carbon Intensity	449.08 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	559.64 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.58 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
Women on board	2022	36.84 % of women on board	33.19 % of women on board	95.67 %
Carbon Intensity	2022	513.36 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	726.75 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.84 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 8557.32 Scope 2: 1660.651 Scope 3: 18959.535 Scope 1+2: 10217.971 Scope 1+2+3: 28534.773
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 90.036 Scope 1+2+3: 228.803

Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 69.53 Energy Production: 61.36
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE D: 7.016 Sector NACE E: 1.464 Sector NACE F: 0.376 Sector NACE H: 0.65 Sector NACE L: 1
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	15.81
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.076

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.932
-------------------------------------	--	--	-------

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	35.75 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14.7%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	37.09
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 8557.32
Ecosystem protection & Deforestation policy			Scope 2: 1660.651 Scope 3: 18959.535 Scope 1+2: 10217.971 Scope 1+2+3: 28534.773
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 90.036
Ecosystem protection & Deforestation policy			Scope 1+2+3: 228.803
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1426.5
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	34.28
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 69.53 Energy Production: 61.36
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	15.81

NGGLN 5.602% - 12/06/2028 Call	Electricity, gas, steam and air conditioning supply	1.6%	GB

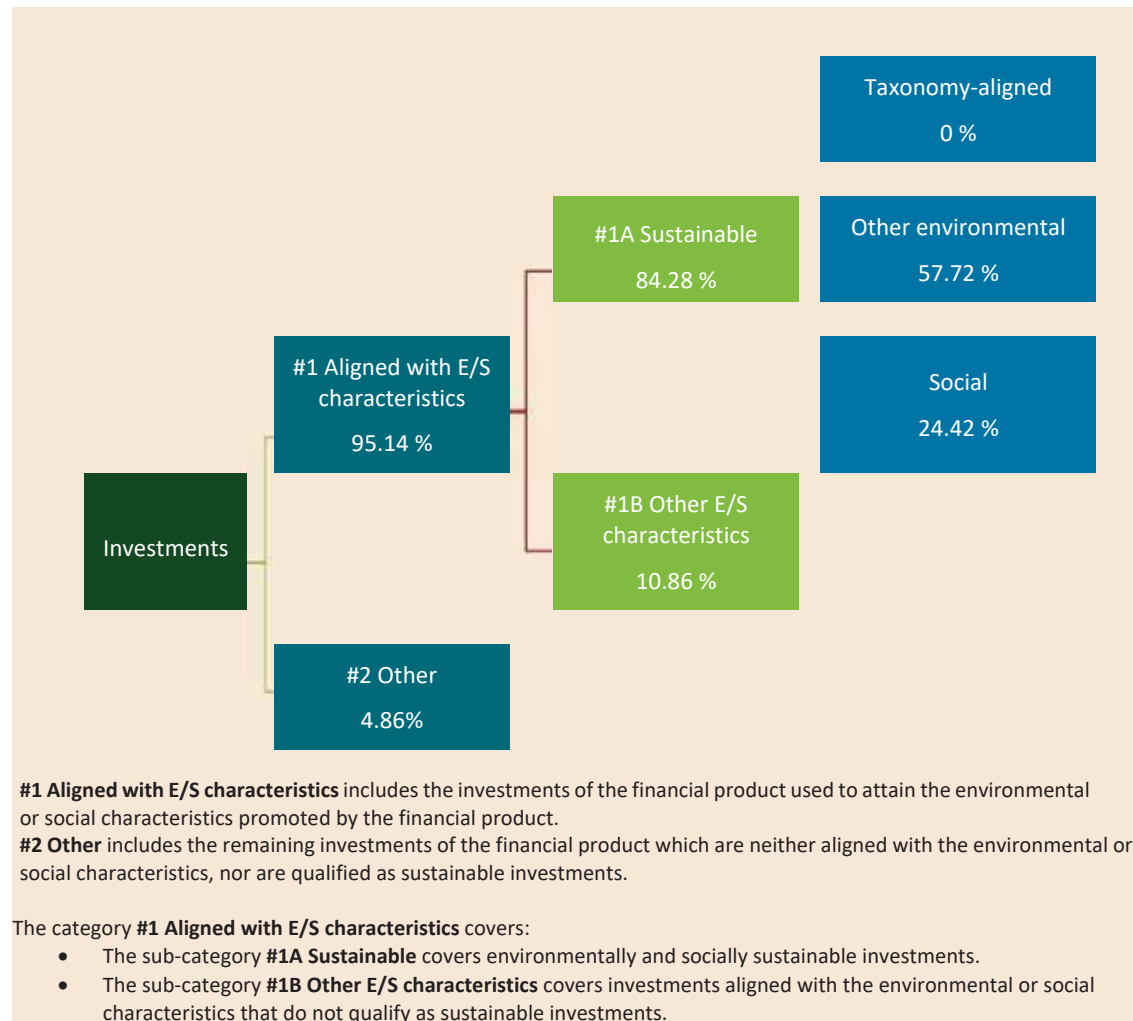

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Electricity, gas, steam and air conditioning supply	36.89%
Real estate activities	21.46%
Warehousing and support activities for transportation	12.68%
Land transport and transport via pipelines	9.97%
Civil engineering	7.37%
Water collection, treatment and supply	7.36%
Construction of buildings	1.43%
Other	1.11%
Programming and broadcasting activities	1.05%
Public administration and defence; compulsory social security	0.68%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 57.72% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 24.42% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 4.86% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity related instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to

attain the financial objective of the Financial Product and/or for diversification and/or hedging purposes.

Environmental or social safeguards are applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - SUSTAINABLE EQUITY QI (the "Financial Product")

Entity LEI: 21380043259EJLUQF79

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 62.38% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	108.69 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign		99.95 %
Water Intensity	2899.64 Thousands of cubic meters for corporates		99.95 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	128.15 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	225.84 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.89 %
Water intensity	2022	7835.77 Thousands of cubic meters for corporates	12712.05 Thousands of cubic meters for corporates	99.89 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 23207.504 Scope 2: 9145.605 Scope 3: 611149.875 Scope 1+2: 32353.109 Scope 1+2+3: 640546.625
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 19.678 Scope 1+2+3: 405.201
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 1585.836
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	5.77
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 63.52 Energy Production: 65.61
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.166 Sector NACE D: 2.451 Sector NACE E: 0.484 Sector NACE F: 0.022 Sector NACE G: 0.094 Sector NACE H: 0.741 Sector NACE L: 0.204

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	1.98
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.064
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.735

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	52.43 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14.58%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	34.59
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 23207.504
Ecosystem protection & Deforestation policy			Scope 2: 9145.605
			Scope 3: 611149.875
			Scope 1+2: 32353.109
			Scope 1+2+3: 640546.625
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 19.678
Ecosystem protection & Deforestation policy			Scope 1+2+3: 405.201
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1585.836
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	5.77
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 63.52 Energy Production: 65.61
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	1.98

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	34.59
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	4.85%	US
MICROSOFT CORP XNGS USD	Publishing activities	3.99%	US
ALPHABET INC-CL A XNGS USD	Information service activities	2.17%	US
PROCTER & GAMBLE CO/THE XNYS USD	Manufacture of paper and paper products	1.11%	US
JOHNSON & JOHNSON XNYS USD	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.09%	US
PEPSICO INC XNGS USD	Manufacture of beverages	1.07%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	1.06%	US
COCA-COLA CO/THE XNYS USD	Manufacture of beverages	1.04%	US
BERKSHIRE HATHAWAY INC-CL B XNYS USD	Insurance, reinsurance and pension funding, except compulsory social security	1.01%	US
Portfolio 49699 USD SET SSX	Other	0.97%	N/A
UNITEDHEALTH GROUP INC XNYS USD	Insurance, reinsurance and pension funding, except compulsory social security	0.9%	US
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	0.88%	US
COSTCO WHOLESALE CORP XNGS USD	Retail trade, except of motor vehicles and motorcycles	0.87%	US
ROYAL BANK OF CANADA XTSE CAD	Financial service activities, except insurance and pension funding	0.86%	CA
ABBOTT LABORATORIES XNYS USD	Manufacture of computer, electronic and optical products	0.85%	US

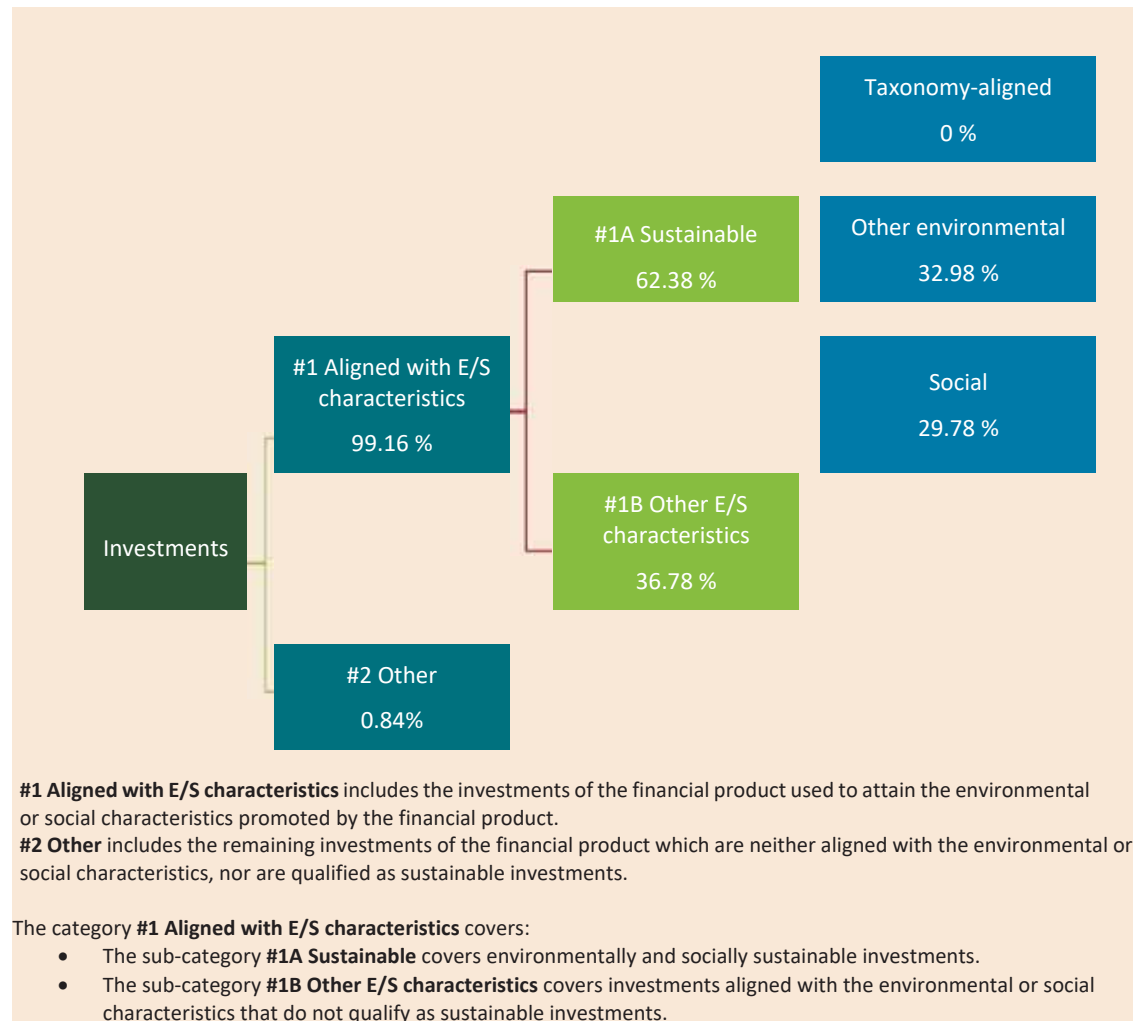

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of computer, electronic and optical products	12.97%
Insurance, reinsurance and pension funding, except compulsory social security	7.9%
Retail trade, except of motor vehicles and motorcycles	6.27%
Publishing activities	6.12%
Financial service activities, except insurance and pension funding	5.72%
Information service activities	5.47%
Activities auxiliary to financial services and insurance activities	5.13%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.08%
Manufacture of machinery and equipment n.e.c.	3.9%
Telecommunications	3.39%
Manufacture of food products	3.27%
Manufacture of beverages	3.23%
Wholesale trade, except of motor vehicles and motorcycles	2.88%
Manufacture of paper and paper products	2.87%
Electricity, gas, steam and air conditioning supply	2.84%
Manufacture of electrical equipment	2.35%
Land transport and transport via pipelines	2.28%
Manufacture of chemicals and chemical products	2.12%
Real estate activities	2.02%
Computer programming, consultancy and related activities	1.7%
Manufacture of motor vehicles, trailers and semi-trailers	1.6%
Other manufacturing	1.24%
Other	1.01%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.97%
Waste collection, treatment and disposal activities; materials recovery	0.8%
Manufacture of coke and refined petroleum products	0.73%
Scientific research and development	0.67%
Security and investigation activities	0.66%

Postal and courier activities	0.51%
Construction of buildings	0.48%
Water collection, treatment and supply	0.47%
Warehousing and support activities for transportation	0.43%
Food and beverage service activities	0.42%
Mining of metal ores	0.39%
Manufacture of other non-metallic mineral products	0.35%
Other personal service activities	0.27%
Office administrative, office support and other business support activities	0.24%
Human health activities	0.24%
Manufacture of rubber and plastic products	0.21%
Manufacture of fabricated metal products, except machinery and equipment	0.14%
Manufacture of leather and related products	0.13%
Gambling and betting activities	0.1%
Advertising and market research	0.1%
Services to buildings and landscape activities	0.1%
Architectural and engineering activities; technical testing and analysis	0.08%
Civil engineering	0.05%
Manufacture of other transport equipment	0.04%
Legal and accounting activities	0.03%
Motion picture, video and television programme production, sound recording and music publishing activities	0.03%
Manufacture of wearing apparel	0.02%
Manufacture of basic metals	0.02%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 32.98% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 29.78% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 0.84% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - SWITZERLAND EQUITY (the "Financial Product")

Entity LEI: 2138001ELXVWPC8ELB48

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 72.54% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	125.51 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	135.11 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.36 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	124.43 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	161.08 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 2029.953 Scope 2: 2265.822 Scope 3: 68404.391 Scope 1+2: 4295.775 Scope 1+2+3: 72537.938
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 15.315 Scope 1+2+3: 214.602
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 916.593

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE B: 0.641 Sector NACE C: 0.165 Sector NACE L: 0.264
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	N/A
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.002
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.819

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	26.1 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	13.25%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	32.73
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 2029.953
Ecosystem protection & Deforestation policy			Scope 2: 2265.822
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 3: 68404.391
Ecosystem protection & Deforestation policy			Scope 1+2: 15.315
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 214.602

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
NESTLE SA-REG XSWX CHF	Manufacture of food products	9.5%	CH
ROCHE HOLDING AG-GENUSSCHEIN XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	6.62%	CH
NOVARTIS AG-REG XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.86%	CH
JULIUS BAER GROUP LTD XSWX CHF	Activities auxiliary to financial services and insurance activities	5.38%	CH
ABB LTD-REG XSWX CHF	Manufacture of computer, electronic and optical products	4.79%	CH
SIG GROUP AG XSWX CHF	Manufacture of paper and paper products	4.06%	CH
BARRY CALLEBAUT AG-REG XSWX CHF	Manufacture of food products	3.57%	CH
CIE FINANCIERE RICHEMO-A REG XSWX CHF	Other manufacturing	3.57%	CH
ZURICH INSURANCE GROUP AG XSWX CHF	Insurance, reinsurance and pension funding, except compulsory social security	3.52%	CH
FISCHER (GEORG)-REG XSWX CHF	Manufacture of machinery and equipment n.e.c.	3.46%	CH
SWISSCOM AG-REG XSWX CHF	Telecommunications	3.35%	CH
LONZA GROUP AG-REG XSWX CHF	Human health activities	3.32%	CH
Portfolio 231 CHF SET SSX	Other	3.19%	N/A
VAT GROUP AG XSWX CHF	Manufacture of machinery and equipment n.e.c.	3.14%	CH
SIEGFRIED HOLDING AG-REG XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.91%	CH

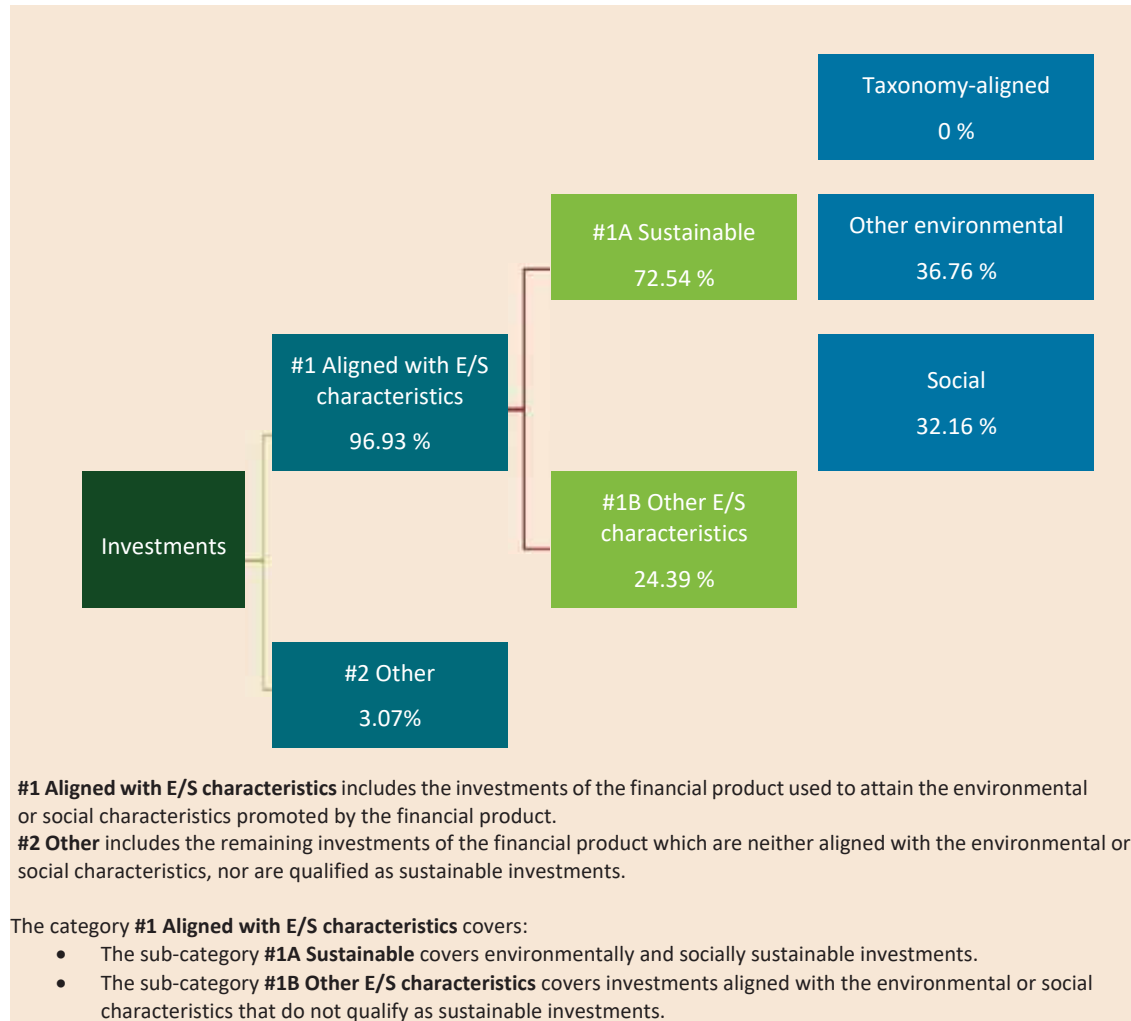

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of basic pharmaceutical products and pharmaceutical preparations	15.97%
Manufacture of food products	15.19%
Manufacture of machinery and equipment n.e.c.	11.39%
Manufacture of computer, electronic and optical products	9.2%
Other manufacturing	8.14%
Activities auxiliary to financial services and insurance activities	7.99%
Insurance, reinsurance and pension funding, except compulsory social security	5.84%
Manufacture of paper and paper products	4.06%
Telecommunications	3.35%
Human health activities	3.32%
Other	3.18%
Manufacture of chemicals and chemical products	2.39%
Manufacture of other non-metallic mineral products	2.21%
Real estate activities	1.79%
Manufacture of fabricated metal products, except machinery and equipment	1.61%
Financial service activities, except insurance and pension funding	1.42%
Electricity, gas, steam and air conditioning supply	0.91%
Manufacture of electrical equipment	0.59%
Publishing activities	0.5%
Manufacture of rubber and plastic products	0.49%
Computer programming, consultancy and related activities	0.28%
Warehousing and support activities for transportation	0.11%
Employment activities	0.07%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 36.76% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 32.16% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 3.07% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - UK EQUITY Entity LEI: 213800C215XQXI3S8M28 (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47.16% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	118.39 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	128.47 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	93.28 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	169.5 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	214.79 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	93.15 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the

- OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 4733.105 Scope 2: 1951.048 Scope 3: 107321.141 Scope 1+2: 6684.153 Scope 1+2+3: 113444.063

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.004
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	63.262

Social and Governance:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	54.33 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14.92%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	40.92
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 4733.105
Ecosystem protection & Deforestation policy			Scope 2: 1951.048 Scope 3: 107321.141 Scope 1+2: 6684.153 Scope 1+2+3: 113444.063
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 31.5
Ecosystem protection & Deforestation policy			Scope 1+2+3: 564.229
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1531.285
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	7.11
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 52.85
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	1.36
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	40.92
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.5%	GB

SHELL PLC XLON GBP	Manufacture of coke and refined petroleum products	3.95%	GB
BP PLC XLON GBP	Manufacture of coke and refined petroleum products	3.64%	GB
GSK PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.5%	GB
RECKITT BENCKISER GROUP PLC XLON GBP	Manufacture of paper and paper products	3.45%	GB
DIAGEO PLC XLON GBP	Manufacture of beverages	3.34%	GB
LONDON STOCK EXCHANGE GROUP XLON GBP	Activities auxiliary to financial services and insurance activities	3.31%	GB
EXPERIAN PLC XLON GBP	Information service activities	2.9%	IE
ASHTREAD GROUP PLC XLON GBP	Rental and leasing activities	2.66%	GB
PRUDENTIAL PLC XLON GBP	Insurance, reinsurance and pension funding, except compulsory social security	2.6%	HK
RENTOKIL INITIAL PLC XLON GBP	Services to buildings and landscape activities	2.43%	GB
LEGAL & GENERAL GROUP PLC XLON GBP	Insurance, reinsurance and pension funding, except compulsory social security	2.22%	GB
LLOYDS BANKING GROUP PLC XLON GBP	Financial service activities, except insurance and pension funding	2.19%	GB
WEIR GROUP PLC/THE XLON GBP	Manufacture of machinery and equipment n.e.c.	2.02%	GB
DUNELM GROUP PLC XLON GBP	Retail trade, except of motor vehicles and motorcycles	2.01%	GB

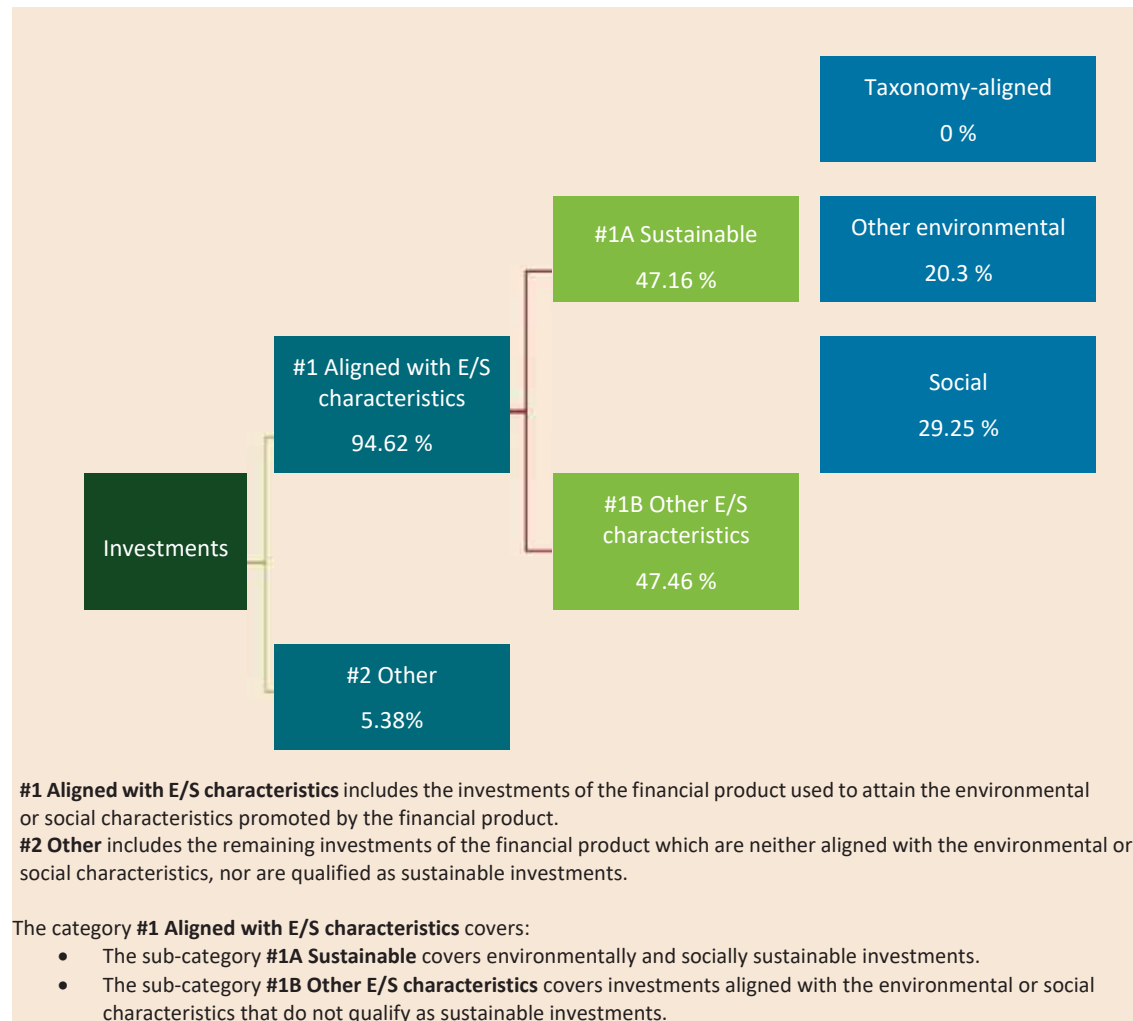

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of basic pharmaceutical products and pharmaceutical preparations	8.86%
Information service activities	8.34%
Manufacture of coke and refined petroleum products	7.6%
Activities auxiliary to financial services and insurance activities	6.84%
Insurance, reinsurance and pension funding, except compulsory social security	6.26%
Retail trade, except of motor vehicles and motorcycles	6.24%
Publishing activities	5.46%
Financial service activities, except insurance and pension funding	4.88%
Manufacture of paper and paper products	4.34%
Manufacture of beverages	3.89%
Manufacture of machinery and equipment n.e.c.	3.72%
Advertising and market research	3.21%
Manufacture of fabricated metal products, except machinery and equipment	2.81%
Computer programming, consultancy and related activities	2.74%
Rental and leasing activities	2.66%
Services to buildings and landscape activities	2.43%
Real estate activities	2.14%
Manufacture of chemicals and chemical products	2.01%
Other	1.9%
Manufacture of computer, electronic and optical products	1.78%
Extraction of crude petroleum and natural gas	1.55%
Manufacture of other non-metallic mineral products	1.52%
Manufacture of other transport equipment	1.42%
Mining of metal ores	1.41%
Manufacture of textiles	1.18%
Architectural and engineering activities; technical testing and analysis	1.13%
Manufacture of food products	0.94%
Food and beverage service activities	0.9%
Construction of buildings	0.61%

Manufacture of electrical equipment	0.46%
Manufacture of motor vehicles, trailers and semi-trailers	0.27%
Other manufacturing	0.17%
Sports activities and amusement and recreation activities	0.13%
Crop and animal production, hunting and related service activities	0.12%
Scientific research and development	0.08%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 20.3% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 29.25% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 5.38% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - US CREDIT Entity LEI: 2138001K1UWJEUHHLH73
 SHORT DURATION IG (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ____%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ____%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 48.12% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.9 / 10	6.68 / 10	100 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	6.72 / 10	6.61 / 10	100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 17378.217 Scope 2: 4202.791 Scope 3: 184652.063 Scope 1+2: 21581.008 Scope 1+2+3: 206401.813

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE B: 0.278 Sector NACE C: 0.613 Sector NACE D: 10.227 Sector NACE E: 0.172 Sector NACE G: 0.222 Sector NACE H: 2.205 Sector NACE L: 0.131
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	3.17

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.003
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.157

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	54.72 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.88%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	33.5
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 17378.217
Ecosystem protection & Deforestation policy			Scope 2: 4202.791
			Scope 3: 184652.063
			Scope 1+2: 21581.008
			Scope 1+2+3: 206401.813
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 52.532
Ecosystem protection & Deforestation policy			Scope 1+2+3: 530.723
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 1579.561
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	16.11
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 70.56 Energy Production: 75.84
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	3.17
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	33.5
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
SCHW Float - 13/05/2026 Call	Activities auxiliary to financial services and insurance activities	1.72%	US

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Financial service activities, except insurance and pension funding	33.64%
Activities auxiliary to financial services and insurance activities	8.04%
Electricity, gas, steam and air conditioning supply	6.21%
Land transport and transport via pipelines	5.53%
Insurance, reinsurance and pension funding, except compulsory social security	5.44%
Manufacture of computer, electronic and optical products	3.58%
Telecommunications	3.34%
Wholesale trade, except of motor vehicles and motorcycles	3.28%
Real estate activities	2.87%
Manufacture of motor vehicles, trailers and semi-trailers	2.64%
Rental and leasing activities	2.24%
Other manufacturing	2.06%
Extraction of crude petroleum and natural gas	1.97%
Publishing activities	1.73%
Motion picture, video and television programme production, sound recording and music publishing activities	1.6%
Human health activities	1.5%
Manufacture of food products	1.46%
Scientific research and development	1.43%
Manufacture of chemicals and chemical products	1.18%
Manufacture of beverages	1.15%
Manufacture of machinery and equipment n.e.c.	1.15%
Manufacture of paper and paper products	1.1%
Other	1.09%
Manufacture of coke and refined petroleum products	1.06%
Warehousing and support activities for transportation	0.69%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.64%
Manufacture of rubber and plastic products	0.63%
Retail trade, except of motor vehicles and motorcycles	0.61%
Legal and accounting activities	0.55%

Office administrative, office support and other business support activities	0.42%
Food and beverage service activities	0.29%
Manufacture of other transport equipment	0.27%
Accommodation	0.24%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.13%
Manufacture of electrical equipment	0.12%
Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	0.12%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

- Yes
- In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 15.77% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 33.64% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 1.09% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

27 Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - US ENHANCED HIGH YIELD BONDS (the "Financial Product")

Entity LEI: 213800FKWSIZVZ5JGJ30

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 27.28% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/>	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	5.08 / 10	5.26 / 10	100 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	4.82 / 10	4.79 / 10	100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 14474.027 Scope 2: 4637.376 Scope 3: 85065.648 Scope 1+2: 19111.402 Scope 1+2+3: 99320.406
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 91.469 Scope 1+2+3: 363.663
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 932.743
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	3.74
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 83.36

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.814 Sector NACE G: 0.029 Sector NACE H: 2.85 Sector NACE L: 0.354
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	1.1
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.003
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.282

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	57.45 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.36%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	25.65
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 14474.027
Ecosystem protection & Deforestation policy			Scope 2: 4637.376 Scope 3: 85065.648 Scope 1+2: 19111.402 Scope 1+2+3: 99320.406
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 91.469

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A
------------------------------	---	------------------	-----

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
Stand alone 101380 USD SET SSX	Other	8.65%	N/A
Ptf 68222 USD SET SSX	Other	5.27%	N/A
MATW 5.25% - 01/12/2025 Call	Other personal service activities	1.6%	US
ABEGET 9.75% - 01/03/2027 Call	Information service activities	1.57%	US
LABL 6.75% - 15/07/2026 Call	Office administrative, office support and other business support activities	1.47%	US
VCVHHO 9.75% - 15/08/2026 Call	Information service activities	1.35%	US
CCOI 3.5% - 01/05/2026 Call	Telecommunications	1.26%	US
ARGIHC 7% - 15/06/2025 Call	Food and beverage service activities	1.23%	US
HBGCN 7% - 01/05/2026 Call	Activities auxiliary to financial services and insurance activities	1.19%	US
NXST 5.625% - 15/07/2027 Call	Programming and broadcasting activities	1.15%	US
RDIO 6.75% - 15/07/2025 Call	Other manufacturing	1.15%	US
TRIVIU 5.5% - 15/08/2026 Call	Manufacture of fabricated metal products, except machinery and equipment	1.12%	NL

WATCOS 6.5% - 15/06/2027 Call	Land transport and transport via pipelines	1.11%	US
BMCAUS 5% - 15/02/2027 Call	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	1.08%	US
GTN 5.875% - 15/07/2026 Call	Programming and broadcasting activities	1.05%	US

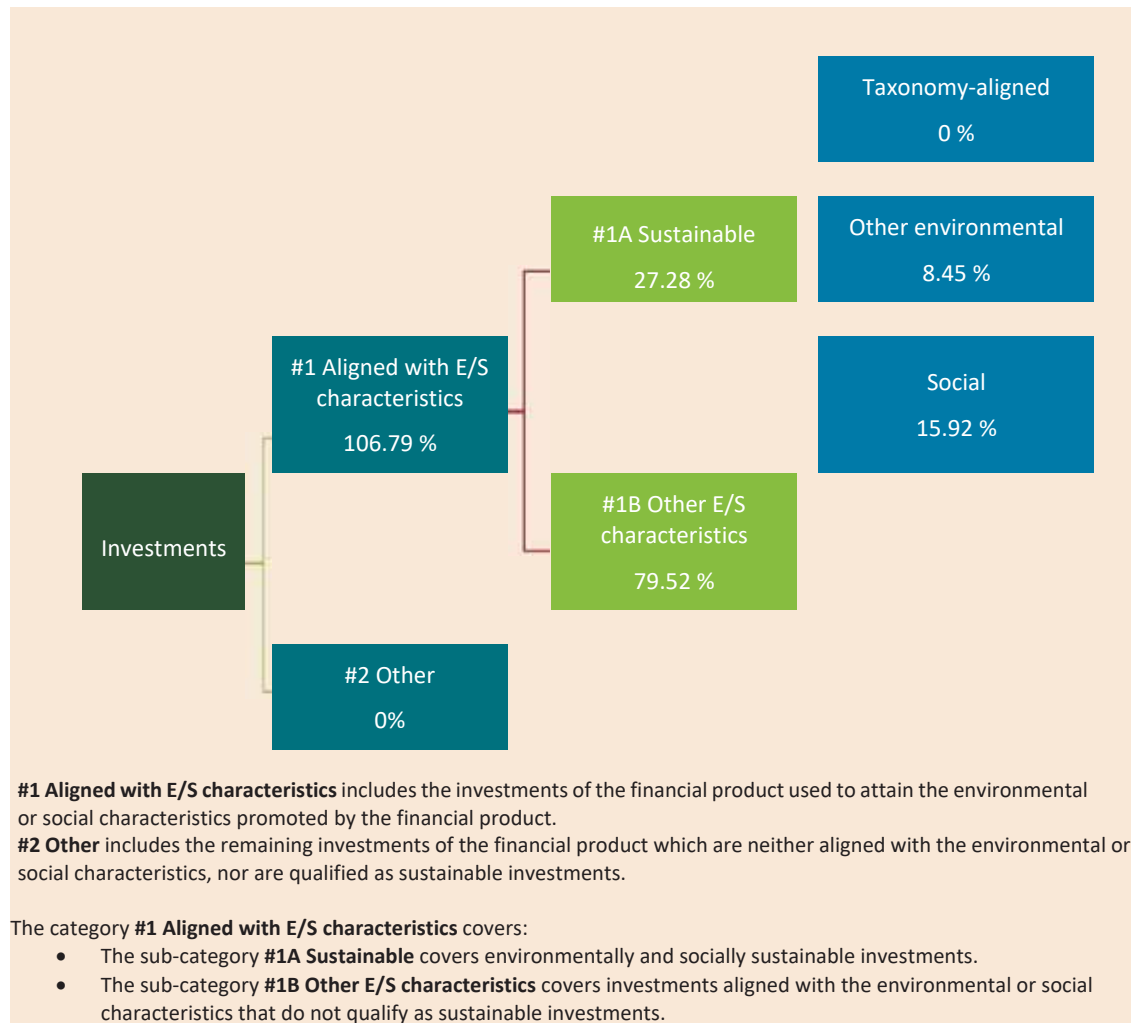

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Other	14.13%
Telecommunications	8.11%
Financial service activities, except insurance and pension funding	5.66%
Land transport and transport via pipelines	4.96%
Real estate activities	4.72%
Gambling and betting activities	3.92%
Information service activities	3.91%
Publishing activities	3.51%
Retail trade, except of motor vehicles and motorcycles	3.47%
Human health activities	3.23%
Security and investigation activities	3.08%
Food and beverage service activities	3.03%
Programming and broadcasting activities	2.89%
Manufacture of food products	2.84%
Manufacture of paper and paper products	2.67%
Office administrative, office support and other business support activities	2.28%
Wholesale trade, except of motor vehicles and motorcycles	2.25%
Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	2.11%
Other manufacturing	1.92%
Manufacture of chemicals and chemical products	1.88%
Activities auxiliary to financial services and insurance activities	1.8%
Manufacture of computer, electronic and optical products	1.76%
Manufacture of fabricated metal products, except machinery and equipment	1.62%
Other personal service activities	1.6%
Manufacture of motor vehicles, trailers and semi-trailers	1.56%
Manufacture of other non-metallic mineral products	1.45%
Advertising and market research	1.21%
Manufacture of wearing apparel	1.06%

Extraction of crude petroleum and natural gas	0.9%
Manufacture of basic metals	0.89%
Motion picture, video and television programme production, sound recording and music publishing activities	0.74%
Manufacture of electrical equipment	0.69%
Sports activities and amusement and recreation activities	0.6%
Manufacture of rubber and plastic products	0.57%
Computer programming, consultancy and related activities	0.55%
Manufacture of machinery and equipment n.e.c.	0.51%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.41%
Waste collection, treatment and disposal activities; materials recovery	0.41%
Creative, arts and entertainment activities	0.39%
Manufacture of other transport equipment	0.21%
Mining support service activities	0.2%
Water transport	0.19%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.1%
Accommodation	0.01%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

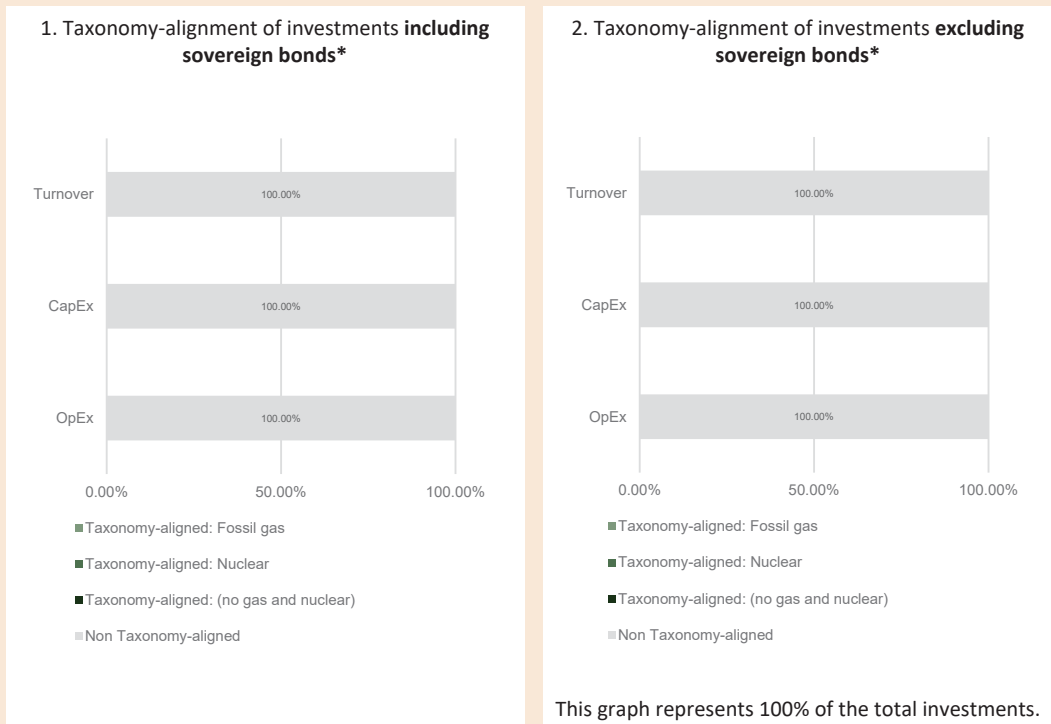

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 8.45% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 15.92% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented -6.79% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - US HIGH YIELD BONDS (the "Financial Product") Entity LEI: 213800MRE1HGV6R96K78

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 23.14% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Investment Universe during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	5.08 / 10	5.26 / 10	99.57 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2022	4.87 / 10	4.79 / 10	100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact ' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 52625.719 Scope 2: 20562.289 Scope 3: 546507.625 Scope 1+2: 73188.008 Scope 1+2+3: 594103.063
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	Scope 1+2: 67.995 Scope 1+2+3: 347.096
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 1382.397

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE B: 0.738 Sector NACE C: 0.444 Sector NACE E: 0.828 Sector NACE G: 0.078 Sector NACE H: 4.318 Sector NACE L: 0.28
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	N/A
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.001

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.07
-------------------------------------	--	--	------

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	44.15 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	17.05%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	26.19
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 52625.719
Ecosystem protection & Deforestation policy			Scope 2: 20562.289
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 3: 546507.625
Ecosystem protection & Deforestation policy			Scope 1+2: 73188.008
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 594103.063
Ecosystem protection & Deforestation policy			Scope 1+2: 67.995
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	Scope 1+2+3: 347.096

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	26.19
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
Portfolio 19339 USD SET SSX	Other	2.44%	N/A
MATW 5.25% - 01/12/2025 Call	Other personal service activities	1.09%	US
ABEGET 9.75% - 01/03/2027 Call	Information service activities	0.99%	US
VCVHHO 9.75% - 15/08/2026 Call	Information service activities	0.98%	US
ZMINFO 3.875% - 01/02/2029 Call	Publishing activities	0.92%	US
SSNC 5.5% - 30/09/2027 Call	Publishing activities	0.85%	US
LUMMUS 9% - 01/07/2028 Call	Manufacture of chemicals and chemical products	0.8%	US
BWY 9.25% - 15/04/2027 Call	Manufacture of paper and paper products	0.79%	US
WATCOS 6.5% - 15/06/2027 Call	Land transport and transport via pipelines	0.73%	US
LABL 10.5% - 15/07/2027 Call	Office administrative, office support and other business support activities	0.68%	US
CZR 6.25% - 01/07/2025 Call	Gambling and betting activities	0.68%	US
SOLWAT 7.625% - 01/04/2026 Call	Mining support service activities	0.67%	US
GWCN 9.5% - 01/11/2027 Call	Security and investigation activities	0.66%	CA
ACIW 5.75% - 15/08/2026 Call	Publishing activities	0.64%	US
CLVTSC 4.875% - 01/07/2029 Call	Publishing activities	0.62%	US

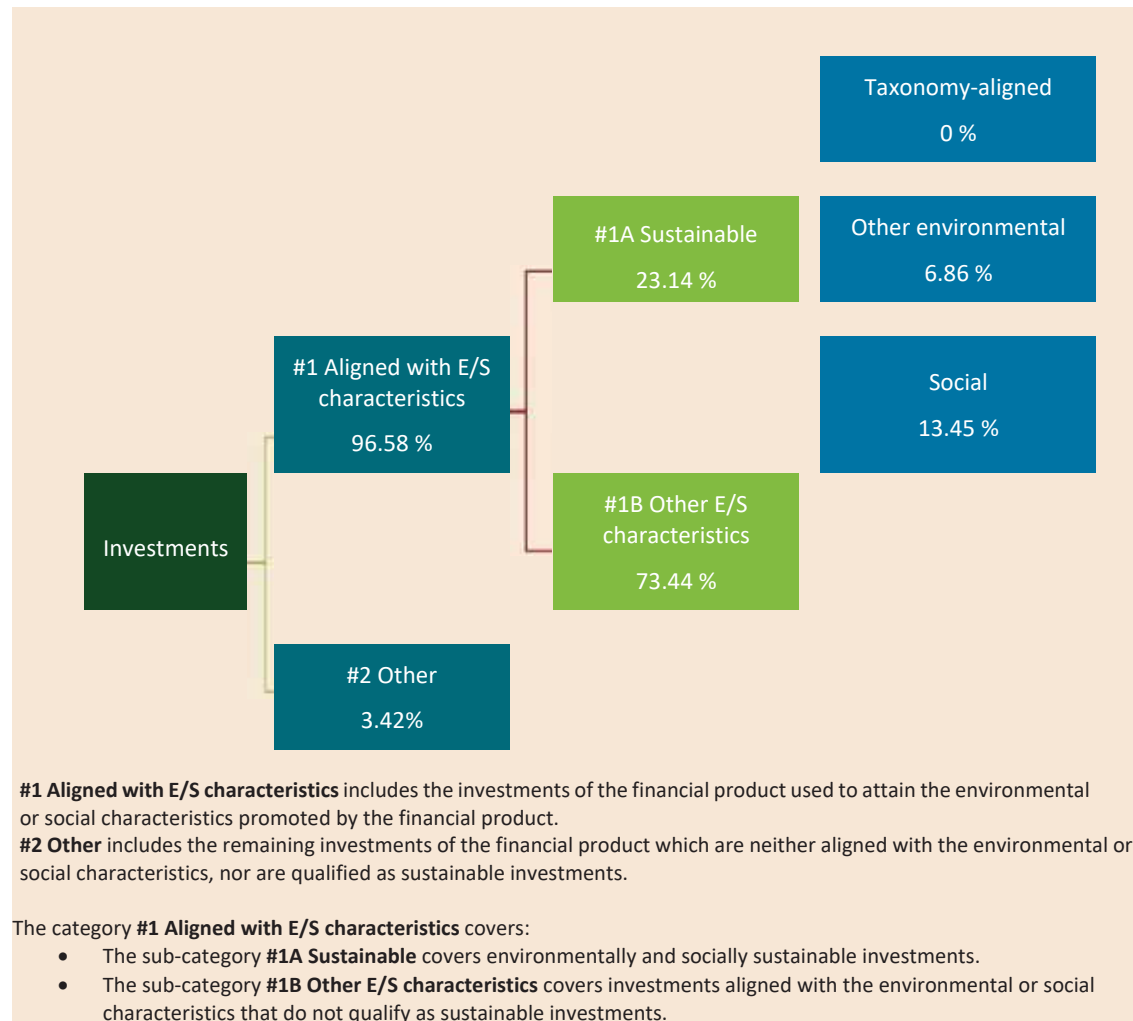

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Publishing activities	9.42%
Telecommunications	7.45%
Land transport and transport via pipelines	6%
Manufacture of chemicals and chemical products	5.19%
Human health activities	3.94%
Real estate activities	3.47%
Wholesale trade, except of motor vehicles and motorcycles	3.15%
Information service activities	3.09%
Extraction of crude petroleum and natural gas	2.96%
Other	2.87%
Manufacture of computer, electronic and optical products	2.81%
Security and investigation activities	2.66%
Retail trade, except of motor vehicles and motorcycles	2.64%
Manufacture of paper and paper products	2.63%
Food and beverage service activities	2.48%
Other manufacturing	2.4%
Financial service activities, except insurance and pension funding	2.34%
Gambling and betting activities	2.04%
Manufacture of motor vehicles, trailers and semi-trailers	2.01%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.97%
Activities auxiliary to financial services and insurance activities	1.91%
Water transport	1.82%
Office administrative, office support and other business support activities	1.72%
Accommodation	1.71%
Manufacture of food products	1.6%
Manufacture of fabricated metal products, except machinery and equipment	1.57%
Manufacture of electrical equipment	1.26%
Computer programming, consultancy and related activities	1.15%
Programming and broadcasting activities	1.14%

Mining support service activities	1.14%
Motion picture, video and television programme production, sound recording and music publishing activities	1.1%
Other personal service activities	1.09%
Manufacture of other non-metallic mineral products	1.07%
Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	0.98%
Advertising and market research	0.94%
Civil engineering	0.88%
Sports activities and amusement and recreation activities	0.84%
Manufacture of machinery and equipment n.e.c.	0.8%
Rental and leasing activities	0.74%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.73%
Manufacture of rubber and plastic products	0.73%
Creative, arts and entertainment activities	0.6%
Manufacture of other transport equipment	0.4%
Manufacture of wearing apparel	0.34%
Manufacture of beverages	0.32%
Scientific research and development	0.32%
Education	0.31%
Manufacture of basic metals	0.29%
Manufacture of leather and related products	0.28%
Construction of buildings	0.25%
Waste collection, treatment and disposal activities; materials recovery	0.23%
Warehousing and support activities for transportation	0.12%
Manufacture of coke and refined petroleum products	0.07%
Printing and reproduction of recorded media	0.06%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 In fossil gas In nuclear energy
 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 6.86% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 13.45% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 3.42% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - US RESPONSIBLE GROWTH (the "Financial Product") Entity LEI: 213800J7BKEI6B8FJO48

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 62.06% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	98.24 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	131.21 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2022	104.52 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	213.07 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	Scope 1: 1334.608 Scope 2: 520.839 Scope 3: 29693.461 Scope 1+2: 1855.447 Scope 1+2+3: 31351.609
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 8.994 Scope 1+2+3: 159.583

Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	N/A
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.011
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.009

Social and Governance:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	74.14 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	13.96%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	34.41
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 1334.608
Ecosystem protection & Deforestation policy			Scope 2: 520.839 Scope 3: 29693.461 Scope 1+2: 1855.447 Scope 1+2+3: 31351.609
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 8.994
Ecosystem protection & Deforestation policy			Scope 1+2+3: 159.583
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 2786.81
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	3.46
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 54.28
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	N/A

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	34.41
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	7.84%	US

MICROSOFT CORP XNGS USD	Publishing activities	6.76%	US
ALPHABET INC-CL C XNGS USD	Information service activities	4.01%	US
Portfolio 35230 USD SET SSD	Other	3.38%	N/A
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	3.36%	US
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	3.07%	US
TESLA INC XNGS USD	Manufacture of motor vehicles, trailers and semi-trailers	1.77%	US
UNITEDHEALTH GROUP INC XNYS USD	Insurance, reinsurance and pension funding, except compulsory social security	1.76%	US
SALESFORCE INC XNYS USD	Publishing activities	1.66%	US
SERVICENOW INC XNYS USD	Publishing activities	1.64%	US
INTUITIVE SURGICAL INC XNGS USD	Other manufacturing	1.63%	US
ROPER TECHNOLOGIES INC XNGS USD	Publishing activities	1.57%	US
FRESHPET INC XNMS USD	Retail trade, except of motor vehicles and motorcycles	1.56%	US
CHIPOTLE MEXICAN GRILL INC XNYS USD	Food and beverage service activities	1.55%	US
WORKDAY INC-CLASS A XNGS USD	Publishing activities	1.55%	US

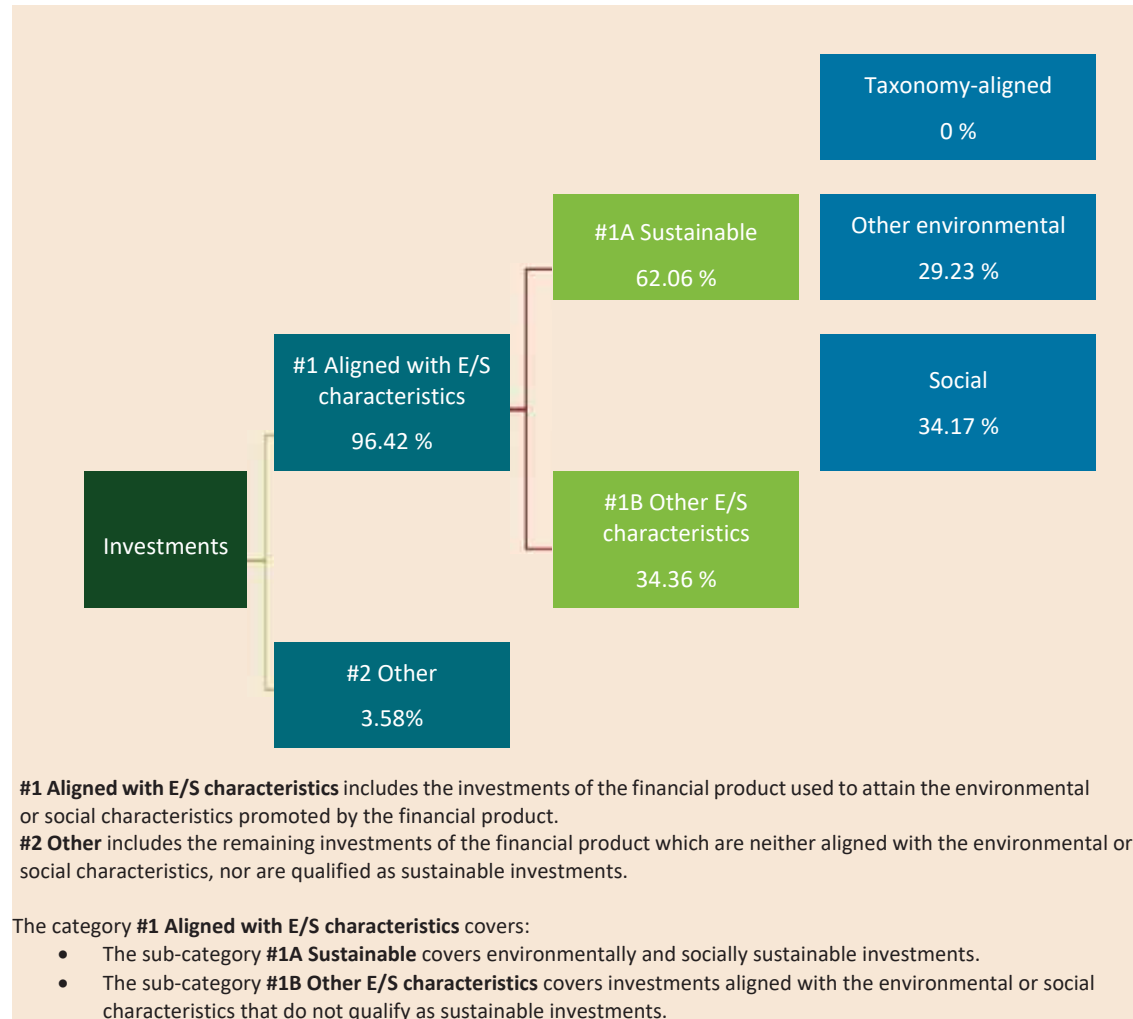

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of computer, electronic and optical products	19.59%
Publishing activities	18.08%
Retail trade, except of motor vehicles and motorcycles	8.27%
Information service activities	5.39%
Other manufacturing	4.26%
Activities auxiliary to financial services and insurance activities	3.91%
Insurance, reinsurance and pension funding, except compulsory social security	3.61%
Other	3.43%
Food and beverage service activities	3%
Real estate activities	2.88%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.81%
Manufacture of chemicals and chemical products	2.19%
Manufacture of fabricated metal products, except machinery and equipment	2.16%
Manufacture of motor vehicles, trailers and semi-trailers	1.77%
Sports activities and amusement and recreation activities	1.77%
Extraction of crude petroleum and natural gas	1.59%
Manufacture of beverages	1.51%
Financial service activities, except insurance and pension funding	1.48%
Water transport	1.44%
Manufacture of machinery and equipment n.e.c.	1.39%
Wholesale and retail trade and repair of motor vehicles and motorcycles	1.38%
Mining support service activities	1.34%
Manufacture of electrical equipment	1.26%
Manufacture of other transport equipment	0.99%
Land transport and transport via pipelines	0.98%
Gambling and betting activities	0.94%
Scientific research and development	0.77%
Manufacture of food products	0.73%
Waste collection, treatment and disposal activities; materials recovery	0.55%

Office administrative, office support and other business support activities	0.52%
---	-------

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³?

Yes

In fossil gas In nuclear energy

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 29.23% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 34.17% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 3.58% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the

financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - US SHORT **Entity LEI:** 2138002N3U1G1LJ4YI08
 DURATION HIGH YIELD BONDS (the "Financial Product")

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<p>●● <input type="checkbox"/> YES</p> <p><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made sustainable investments with a social objective: ____%</p>	<p>● <input checked="" type="checkbox"/> NO</p> <p><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 24.64% of sustainable investments</p> <p><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	5.15 / 10	5.26 / 10	100 %

N.B.: While Sustainability KPIs (including sustainable investments) are reported based on an average of the data available at each end of quarter, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial product.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2022	4.89 / 10		100 %

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement

	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenu	Scope 1+2+3: 983.983
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	3.36
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 83.33
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	Sector NACE C: 0.741 Sector NACE D: 0.498 Sector NACE E: 0.667 Sector NACE G: 0.041 Sector NACE H: 2.707 Sector NACE L: 0.347
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	0.77
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	0.002

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	0.408
-------------------------------------	--	--	-------

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	57.88 %
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	16.88%
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	26.16
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	Scope 1: 21095.779
Ecosystem protection & Deforestation policy			Scope 2: 8206.441 Scope 3: 137255.406 Scope 1+2: 29302.221 Scope 1+2+3: 158405.313
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	Scope 1+2: 76.221
Ecosystem protection & Deforestation policy			Scope 1+2+3: 351.838
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	Scope 1+2+3: 983.983
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	3.36
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	Energy Consumption: 83.33
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	0.77
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	N/A
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	26.16
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter where data is available.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2023-12-29

Top investments	Sector	Proportion	Country
Portfolio USD SET SSX	Other	2.24%	N/A
LABL 6.75% - 15/07/2026 Call	Office administrative, office support and other business support activities	1.34%	US
MATW 5.25% - 01/12/2025 Call	Other personal service activities	1.3%	US
ARGIHC 7% - 15/06/2025 Call	Food and beverage service activities	1.28%	US
GTN 5.875% - 15/07/2026 Call	Programming and broadcasting activities	1.27%	US
VCVHHO 9.75% - 15/08/2026 Call	Information service activities	1.19%	US
AVNT 5.75% - 15/05/2025 Call	Manufacture of chemicals and chemical products	1.18%	US
WLSC 6.125% - 15/06/2025 Call	Office administrative, office support and other business support activities	1.18%	US
SIRI 5% - 01/08/2027 Call	Telecommunications	1.17%	US
XHR 6.375% - 15/08/2025 Call	Real estate activities	1.16%	US
BMCAUS 5% - 15/02/2027 Call	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	1.12%	US
CSCHLD 5.5% - 15/04/2027 Call	Telecommunications	1.1%	US
COMM 6% - 01/03/2026 Call	Manufacture of computer, electronic and optical products	1.08%	US
TRIVIU 5.5% - 15/08/2026 Call	Manufacture of fabricated metal products, except machinery and equipment	1.07%	NL
WATCOS 6.5% - 15/06/2027 Call	Land transport and transport via pipelines	1.07%	US

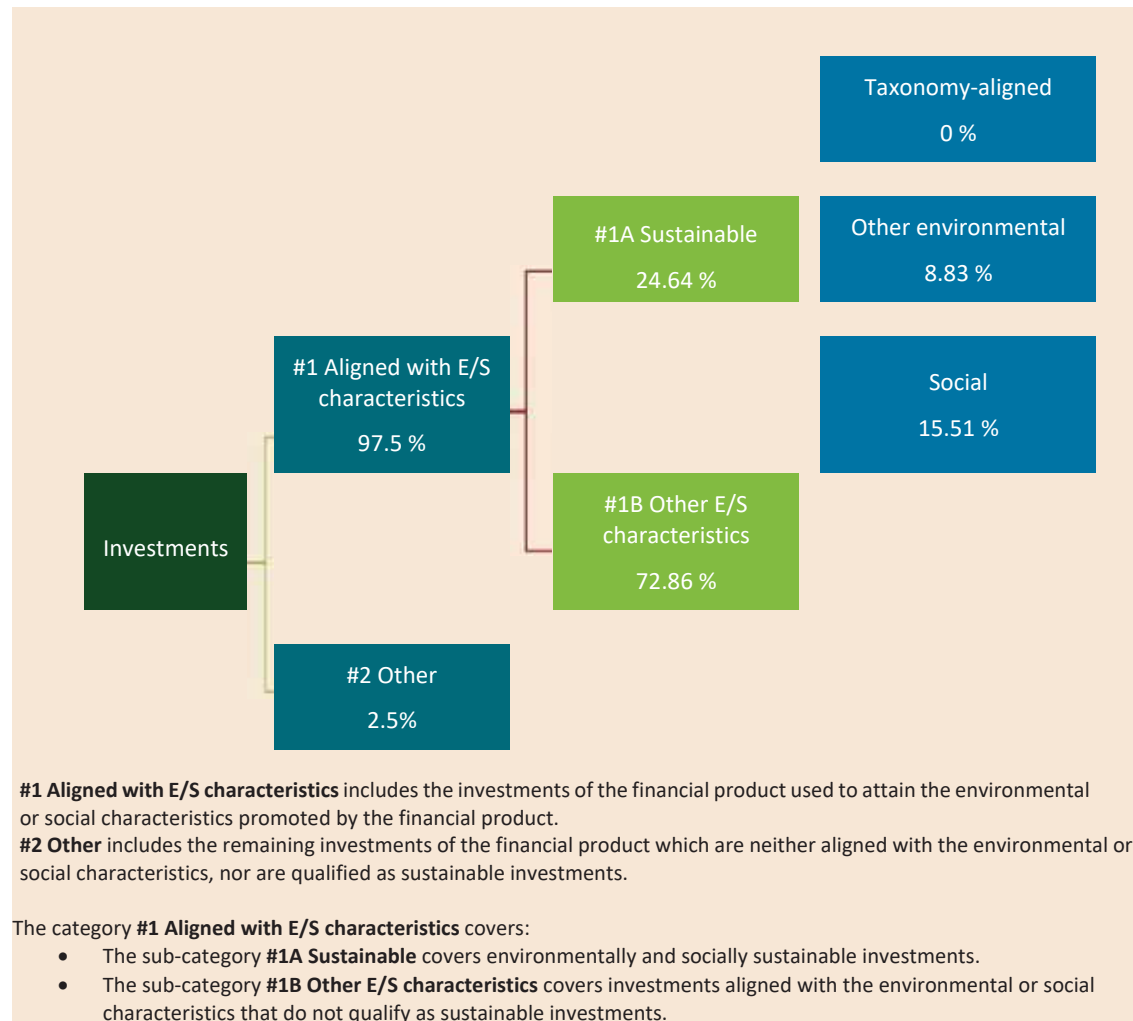

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Telecommunications	7.71%
Financial service activities, except insurance and pension funding	6.98%
Real estate activities	5.08%
Land transport and transport via pipelines	4.69%
Security and investigation activities	4.51%
Publishing activities	4.41%
Food and beverage service activities	4.11%
Gambling and betting activities	3.97%
Human health activities	3.97%
Retail trade, except of motor vehicles and motorcycles	3.46%
Programming and broadcasting activities	3.13%
Manufacture of paper and paper products	2.96%
Manufacture of food products	2.72%
Other manufacturing	2.71%
Manufacture of motor vehicles, trailers and semi-trailers	2.58%
Manufacture of chemicals and chemical products	2.55%
Office administrative, office support and other business support activities	2.55%
Other	2.34%
Manufacture of computer, electronic and optical products	2.2%
Wholesale trade, except of motor vehicles and motorcycles	2.06%
Information service activities	1.83%
Waste collection, treatment and disposal activities; materials recovery	1.77%
Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	1.75%
Activities auxiliary to financial services and insurance activities	1.74%
Manufacture of other non-metallic mineral products	1.69%
Sports activities and amusement and recreation activities	1.68%
Manufacture of electrical equipment	1.63%
Manufacture of fabricated metal products, except machinery and equipment	1.48%

Motion picture, video and television programme production, sound recording and music publishing activities	1.34%
Extraction of crude petroleum and natural gas	1.32%
Other personal service activities	1.3%
Manufacture of rubber and plastic products	1.27%
Advertising and market research	1.14%
Manufacture of basic metals	0.81%
Manufacture of wearing apparel	0.8%
Creative, arts and entertainment activities	0.67%
Manufacture of machinery and equipment n.e.c.	0.62%
Manufacture of other transport equipment	0.5%
Computer programming, consultancy and related activities	0.4%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.39%
Public administration and defence; compulsory social security	0.33%
Architectural and engineering activities; technical testing and analysis	0.28%
Water transport	0.21%
Mining support service activities	0.2%
Construction of buildings	0.1%
Accommodation	0.07%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- Yes
 - In fossil gas In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

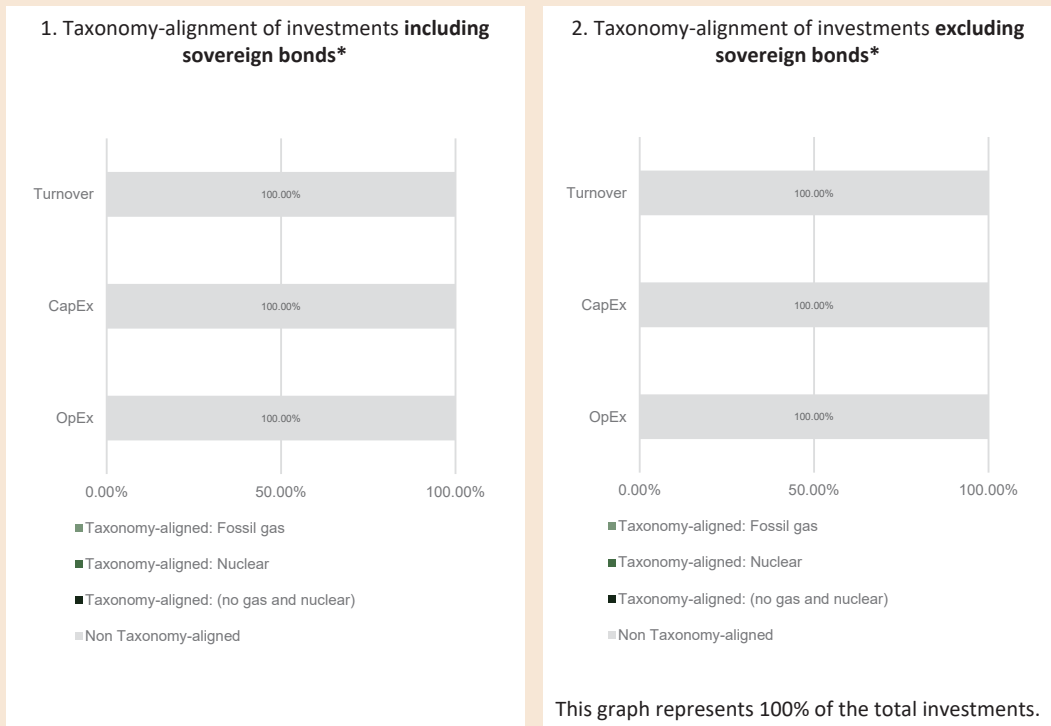

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Financial Product was not aligned to EU Taxonomy for the period of reference, nor for prior year period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 8.83% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 15.51% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 2.5% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2023, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.
