Risk Rating

Fund Description

Lazard's Managed Balanced Fund provides access to both the UK and global equity markets and the relatively lower risk potential associated with investment in UK bonds. It employs both top-down and bottom-up active investment management through the use of dynamic tactical asset allocation and stock picking equity and bond strategies.

Key Risks Related to the Fund

There is no capital guarantee or protection of the value of the Fund. The value of your investment and the income from it can go down as well as up and you may not get back the amount you originally invested.

50% of the annual management charge is deducted from the capital of the Fund. This may increase the amount of income available for distribution but may constrain or erode potential for capital growth.

Investment in lower rated bonds increases the risk of default on repayment and the risk to capital of the Fund.

Key Risks Related to the Share Class

The returns from your investment may be affected by changes in the exchange rate between the Fund's base currency, the currency of the Fund's investments, your share class and your home currency.

See "Risk Factors" in the UCITS' Prospectus for more information about risks.

^{*}Source: Morningstar, NAV to NAV basis, Net Income Reinvested, Net of Fees. Performance data for periods less than 1 year is illustrated on a cumulative growth basis. The Fund's performance is measured against the performance of the All Share and Actuaries UK Conventional Gilts (the "Benchmark") which the manager of the Fund has assessed to be the most appropriate Benchmark for comparison. The Benchmark is not a target for the Fund, nor is the Fund constrained by the Benchmark as the Fund has flexibility to invest in securities and asset classes not included in the Benchmark. The Fund will only invest in securities and asset classes that are stated in the Fund Prospectus or Fund Supplement. IA Sector performance data are post-tax returns that take into account the taxes a hypothetical investor pays on fund distributions and capital gains. The returns from your investment may be affected by changes in the exchange rate.

Glossary

Active Share measured as a percentage, active share is the degree of deviation in holdings between a portfolio and its benchmark. Active share of a portfolio is calculated as half the sum of the absolute active weights of all securities in a portfolio and its benchmark. For portfolios without shorts, the statistic ranges from 0% (index tracker) to 100% (no overlap with index). The higher the number, the more "active" the manager is.

Alpha represents the return of a portfolio that is attributable to the manager's investment decisions.

Beta measures a fund's sensitivity to movements in the overall market.

EPS represents the fiscal period earnings per share (EPS) for the period.

Information ratio represents the value added by the manager (excess return) divided by the tracking error.

The **Ongoing Charges** represent the ongoing costs to the fund from one year to the next which includes but is not limited to the fund's annual management fees, professional fees, audit fees, custody fees and custody transaction fees. It

P/E Ratio/ Earnings Per Share (EPS).

Price to Book Value / Book Value per Share.

Return on Equity (ROE) calculated by taking earnings per share of the company and dividing it by the stock's book value.

The **Risk Rating** is calculated in line with Undertakings for Collective Investment in Transferable Securities Regulations 2011 (the "UCITS Regulations").

Sharpe ratio measures return in excess of the risk free rate for every unit of risk taken.

Tracking error measures the volatility of the difference between a portfolio's performance and the benchmark.

Volatility is a measure of the fund's returns in relation to its historic average.
