## OVERVIEW

The UCITS fund invests in global convertible securities with the aim of rebalancing risk/reward while providing growth and income.

The fund is actively managed and is suitable for long-term investors.

The fund uses the Refinitiv Global Convertible Bond Index and MSCI World Index as comparative benchmarks but not to constrain the fund's portfolio or as a target for performance.

## KEY FEATURES

- Provides broadly diversified exposure to the global convertible bond universe.
- Leverages more than 40 years of research in convertible security investing.
- Seeks to provide upside participation in equity markets with less exposure to downside than an equity-only portfolio over a full market cycle.
- Blends global investment themes and fundamental research via active management.

## PORTFOLIO FIT

Consisting of convertible securities that can participate in upside equity movements with potentially limited downside exposure, the fund can provide a means to manage risk in conjunction with an equity allocation. The fund can also serve a role within a fixed-income allocation, as convertibles have performed well during periods of rising interest rates and inflation.

## Calamos Active Management and Global Perspective Seek to Maximize the Potential Benefits of Convertibles

**Defensive Equity.** For more than 40 years, Calamos has advocated convertible securities for investors seeking upside participation in equity markets with less downside exposure than an equity-only portfolio over a full market cycle.

**Enhanced Fixed Income.** Convertibles can diversify fixed income and hedge the risk of rising rates.

**Global Diversification.** Because the opportunity sets differ across economies, global convertibles can provide improved prospects for alpha generation, downside mitigation and income.

The Refinitiv Global Convertible Bond Index is designed to broadly represent the global convertible bond market. The MSCI World Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed markets. Morningstar Convertible Bond - Global Category funds invest principally in convertible securities of issuers from around the world. Unmanaged index returns assume reinvestment of any and all distributions and, unlike fund returns, do not reflect fees, expenses or sales charges. Investors cannot invest directly in an index. Alpha is a measurement of performance on a risk adjusted basis. A positive alpha shows that performance of a portfolio was higher than expected given the risk. A negative alpha shows that the performance was less than expected given the risk. Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. Conversion premium is the amount by which the market price of a convertible bond or convertible preferred exceeds the conversion value, expressed as a percentage. It is a gauge of equity participation. Delta expresses the convertible's sensitivity to changes in the stock price. It expresses the change in the convertible price per unit of change in the underlying stock price. Investment premium is the amount that the market price of the convertible is above its investment value, expressed as a percentage. It is a gauge of equity participation. Sharpe ratio is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is. R-squared is a mathematical measure that describes how closely a security's movement reflects movements in a benchmark. Standard deviation is a measure of volatility.
