Investment Objective & Policy

The aim of the Fund is to provide income with the potential to grow the amount you invested over the medium to long term.

The Fund will invest at least two-thirds of its assets so as to gain global exposure to company shares, bonds (which are similar to a loan and pay a fixed or variable interest rate) and property. The amount of the Fund that is invested in the different asset types will vary over time as the Fund seeks to achieve its aim.

The Fund will invest in shares and bonds indirectly through regulated and unregulated funds. The Fund may also invest in these assets directly or indirectly by using derivatives. Derivatives are sophisticated investment instruments linked to the rise and fall of the price of other assets.

The Fund's exposure to commodities and property will be gained indirectly through other funds, related securities, or by using derivatives. Commodities are physical materials such as oil, agricultural products, and metals.

The Fund may use derivatives for the purposes of Efficient Portfolio Management and for investment purposes. Derivatives are sophisticated investment instruments linked to the rise and fall of the price of other assets.

Key Risks

- The value of investments can fall as well as rise and investors might not get back the sum originally invested.
- As this Fund invests into other funds you should consider the underlying investments and overall risks.
- Where investments are in assets that are denominated in multiple currencies, or currencies other than your own, changes in exchange rates may affect the value of the investments.
- The Fund invests in securities whose value would be significantly affected if the issuer refused, was unable to or was perceived to be unable to pay.
- Changes in interest rates are likely to affect the Fund's value. In general, as interest rates rise, the price of a fixed rate bond will fall, and vice versa.
- The Fund's assets may sometimes be difficult to value objectively and the actual value may not be recognised until assets are sold.
- The Fund may invest materially in derivatives (complex instruments linked to the rise and fall of the value of other assets). A relatively small change in the value of the underlying investment may have a much larger positive or negative impact on the value of the derivative.
- The value of a property is a matter of a valuer's opinion and the true value may not be recognised until the property is sold. Should material uncertainty apply to the value of properties that constitute more than 20% of the scheme property, it may be necessary to temporarily suspend dealing.
- The fund may exhibit significant price volatility.
- The risks currently identified as applying to the Fund are set out in the "Risk Factors" section of the prospectus.

Investment Approach

Threadneedle Global Multi Asset Income Fund is a long-only, unlevered, actively managed fund that aims to provide a level of income without forsaking capital growth to provide this income. The fund manager seeks to exploit active sources of income and return by using both asset-allocation and stock/fund selection techniques. The fund mainly invests in internal funds. These investments will be supplemented by beta products and direct holdings, where appropriate.

The manager believes that investing in other funds managed by Columbia Threadneedle allows the fund to benefit from the best investment ideas across the product range and the insights of the most experienced fund managers. The fund does not have a preset allocation target for specific country or sector weightings. As a result, the fund manager is able to adopt an active style depending on economic conditions and can pursue investment opportunities throughout the fund's investment universe.

The fund's overall position will be influenced by Columbia Threadneedle's EMEA-based Asset Allocation Strategy Group, which includes representatives of the Multi Asset Team.

The Asset Allocation Strategy Group utilises three research groups to formulate its macroeconomic and thematic views. These views are then combined with a valuation framework to determine the preferred asset-allocation and risk preferences for the fund.

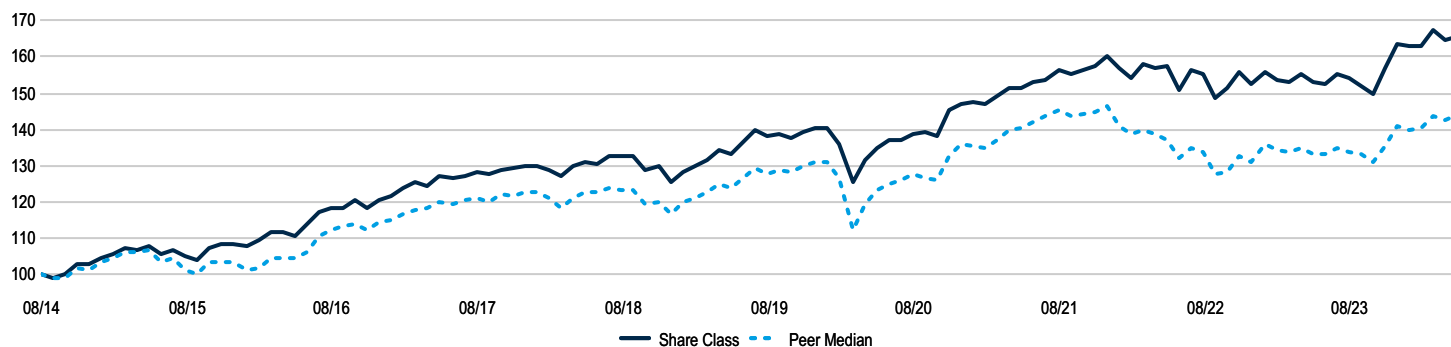

The Multi Asset Team is responsible for the overall portfolio construction of the fund, which will include those securities that have been identified as presenting attractive income as well as risk/return-adjusted characteristics, but may also include asset classes that are intended to provide diversification without detracting from performance.

For reference - the Composite Benchmark is: 20% MSCI UK Monthly Property, 40% MSCI World, 40% Bloomberg Global Aggregate (hedged to GBP).

Performance

Past Performance does not predict future returns. The return of your investment may change as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation.

Source Morningstar UK Limited © 2024 as at 31/05/24. Net Fund returns - based on the bid-to-bid and assuming income is reinvested including ongoing charges excluding entry and exit charges.

Index returns include capital gains and assume reinvestment of any income. The index does not include fees or charges and you cannot invest directly in it.

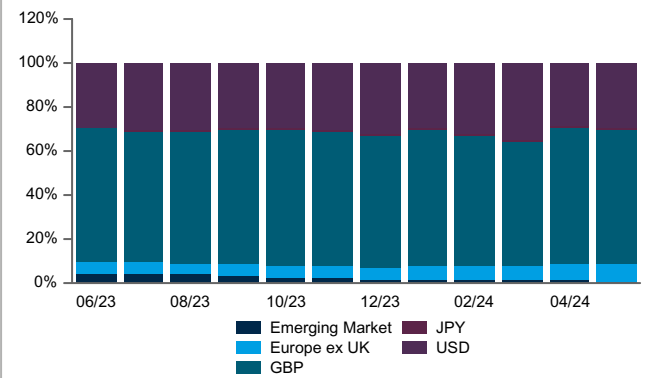

The Investment Association (IA) is the trade body representing the UK investment management industry.

Gross Fund returns - Source Columbia Threadneedle as at 31/05/24. Gross of fee portfolio returns are time-weighted rates of return net of commissions, transaction costs and non-reclaimable taxes on dividends, interest, and capital gains using pricing of investments which is either the last traded price or a bid basis. Cash flows are factored as of the end of the day and exclude entry and exit charges.

Monthly Gross Contributions to Return

Fund returns are in-house calculated daily time weighted based on global close gross valuations with cash flows at start of day and are gross of fees. Past performance is not a guide to future performance. The value of investments and any income from them can fall as well as rise. All positions are based on gross portfolio asset valuations at global close. Weighting and currency exposure data, where applicable, are on a look-through basis to underlying assets where Columbia Threadneedle Investments CIS instruments are held. Groupings of securities, e.g. sectors are in-house defined and are for comparative purposes only. Contribution analysis is calculated on a daily geometric basis unless otherwise stated.

Share classes in the table may not be open to all investors, please refer to the Prospectus for further information. Overall impact of costs: Costs and expected returns may increase or decrease as a result of currency and exchange rate fluctuations, if costs are to be paid in another currency than your local currency. The ongoing charges figure (OCF), exit charges (maximum amount to be deducted shown in the table above) and transaction costs show the percentage that may be deducted from your expected returns. The OCF is usually based on the last year's expenses, includes charges such as the Fund's annual management charge and operating costs. Transaction costs displayed are based on a three year average total and are calculated based on FYE Report and Account figures. Where the fund is less than 3 years old the transaction costs are based on proxy and actual costs. All transaction costs are as at 25/05/23. Additional distributor or intermediary fees may not be included. In some cases, the OCF may be based on an estimate of future charges. For a more detailed breakdown please visit www.columbiathreadneedle.com/fees.

Distribution History Of Share Class (Net)
