

# M&G Global Target Return Fund Sterling Class I – Accumulation shares

Monthly Fund Review as at 31 May 2024

For investment professionals only

## Fund description

The fund targets a combined income and capital growth of at least the Sterling Overnight Index Average (SONIA) plus 2-4% a year over any three-year period, before any charges and in any market condition. SONIA reflects the average interest rate that banks pay to borrow sterling overnight from other financial institutions. The fund aims to achieve this while seeking to minimise the degree to which the value of the fund fluctuates over time, and also seeking to limit monthly losses. Managing the fund in this way reduces its ability to achieve returns significantly above SONIA plus 2-4%. The fund has a highly flexible investment approach with the freedom to invest in different types of investment assets from anywhere in the world. The fund will mostly gain exposure to these assets by investing through derivatives, and by investing directly. The fund manager's approach combines in-depth research to determine the value of assets over the medium to long term, together with analysis of market reactions to events, to identify investment opportunities. There is no guarantee that the fund will achieve a positive return over any period. Investors may not get back the original amount they invested.

## The main risks associated with this fund

For any past performance shown, please note that past performance is not a guide to future performance.

The value and income from the fund's assets will go down as well as up. This will cause the value of your investment to fall as well as rise. There is no guarantee that the fund will achieve its objective and you may get back less than you originally invested.

An 'absolute return' fund may not move in line with market trends or fully benefit from a positive market environment.

Investments in bonds are affected by interest rates, inflation and credit ratings. It is possible that bond issuers will not pay interest or return the capital. All of these events can reduce the value of bonds held by the fund.

The fund may use derivatives to profit from an expected rise or fall in the value of an asset. Should the asset's value vary in an unexpected way, the fund will incur a loss. The fund's use of derivatives may be extensive and exceed the value of its assets (leverage). This has the effect of magnifying the size of losses and gains, resulting in greater fluctuations in the value of the fund.

The fund can be exposed to different currencies. Movements in currency exchange rates may adversely affect the value of your investment.

Further risk factors that apply to the fund can be found in the fund's Prospectus.

**Benchmark:** Prior to 19 July 2021 the benchmark was 3 month GBP LIBOR +4%. With effect from 20 July 2021 the benchmark will be SONIA + 2-4%.

**Performance comparison:** The fund is actively managed. The benchmark is a target which the fund seeks to achieve. The rate has been chosen as the fund's target benchmark as it is an achievable performance target given the fund's investment policy. The target benchmark is used solely to measure the fund's performance and does not constrain the fund's portfolio construction.

Fund performance shown here is both gross returns (before the Ongoing Charge Figure is taken), in line with the objective of the fund, and net returns (after the Ongoing Charge Figure has been taken), to illustrate how charges affected the performance. Investors should note that the net return is what they would receive and is therefore the more relevant figure.
