Investment Objective & Policy

The Fund aims to achieve investment growth over the long term (5 years, or more). It also looks to outperform the Russell 2500 Index ("the Index") over rolling 3-year periods, after the deduction of charges.

The Fund is actively managed, and invests at least 75% of its assets in shares of American smaller companies.

The Fund considers American smaller companies to be those domiciled in the United States of America (US), or with significant US business operations, and which have a market size ranging from typically \$500 million to \$10 billion at the time of investment.

The Index is regarded as an appropriate performance measure of shares in which the Fund invests and provides a suitable target benchmark against which Fund performance will be evaluated over time.

The Investment Manager selects smaller companies considered to have good prospects for share price growth, from across different industries and economic sectors.

The Investment Manager typically invests in fewer than 80 companies, which may include shares of some companies not within the Index.

The Investment Manager also seeks to create a portfolio that compares favourably against the Index over rolling 12-month periods, when assessed using the Columbia Threadneedle ESG Materiality Rating model.

This model (developed and owned by Columbia Threadneedle Investments) analyses company data to assess how effectively material environmental, social and governance (ESG) risks and opportunities are being managed.

If sufficient data is available, the combined results are expressed as a numerical rating to indicate how much exposure a company has to material ESG risks and opportunities in a particular industry.

Whilst the Fund may still invest in shares of companies that have poor ESG Materiality ratings, at least 50% of the portfolio is invested in companies with strong ratings.

The Investment Manager engages with companies with a view to influencing management teams to address material ESG risks and improve their ESG practices.

The Fund only invests in companies that follow good governance practices. It does not invest in companies which derive revenue from industries or activities above the thresholds shown: tobacco production (5%); nuclear weapons – indirect involvement (5%), conventional weapons – military, or civilian firearms (10%), and thermal coal – extraction or power generation (30%).

The Fund excludes companies that have direct involvement in nuclear or controversial weapons, and companies determined to have breached international standards and principles.

The Fund may invest in other securities, collective investment schemes (including funds managed by Columbia Threadneedle companies), money market instruments, deposits, and cash. Derivatives may only be held with the aim of reducing risk or managing the Fund more efficiently.

Key Risks

- The value of investments can fall as well as rise and investors might not get back the sum originally invested.
- Where investments are in assets that are denominated in multiple currencies, or currencies other than your own, changes in exchange rates may affect the value of the investments.
- The Fund holds assets which could prove difficult to sell. The Fund may have to lower the selling price, sell other investments or forego more appealing investment opportunities.
- The Fund may invest in derivatives (complex instruments linked to the rise and fall of the value of other assets) with the aim of reducing risk or minimising the cost of transactions. Such derivative transactions may benefit or negatively affect the performance of the Fund. The Manager does not intend that such use of derivatives will affect the overall risk profile of the Fund.
- The Fund applies a range of measures as part of its consideration of ESG factors, including the exclusion of investments involved in certain industries and/or activities. This reduces the investable universe, and may impact the performance of the Fund positively or negatively relative to a benchmark or other funds without such restrictions.
- The fund typically carries a risk of high volatility due to its portfolio composition or the portfolio management techniques used. This means that the fund's value is likely to fall and rise more frequently and this could be more pronounced than with other funds.
- The risks currently identified as applying to the Fund are set out in the "Risk Factors" section of the prospectus.

Investment Approach

The fund provides exposure to smaller companies in the US, or with significant operations there.

The fund will typically have a relatively diversified portfolio comprising shares of 50 to 80 smaller companies in the USA. Smaller companies are companies with a market capitalisation of typically between US\$ 500 million and US\$ 10 billion at the time of purchase. The portfolio manager has the flexibility to select stocks from across the US smaller-cap market. This enables the manager to focus on the best individual stock opportunities. Smaller companies often have greater potential for earnings growth than larger and more mature businesses, and yet are typically not as well covered by the analyst community: the portfolio manager aims to uncover under-appreciated opportunities identified through our fundamental research and analysis.

We believe that a clear understanding of the macroeconomic and thematic background is a vital starting point for managing the fund. We believe that investment decisions are supported by engaging with company management at face-to-face meetings, which enable the team to gain an understanding of the performance drivers of each company. The team places great importance on fundamental research and industry analysis and believes that this approach will tend to identify companies that are more likely to outperform over the long term.

We are in contact with more than 700 companies per annum to ensure that we gain a thorough understanding of the performance drivers of the business and to help build our conviction in the prospects for the firm. We search for companies with a sound underlying business and financial model which are able to add value for their customers, and where management has the expertise to oversee long-term growth.

Performance

Past Performance does not predict future returns. The return of your investment may change as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation.

3 Month Effect Totals

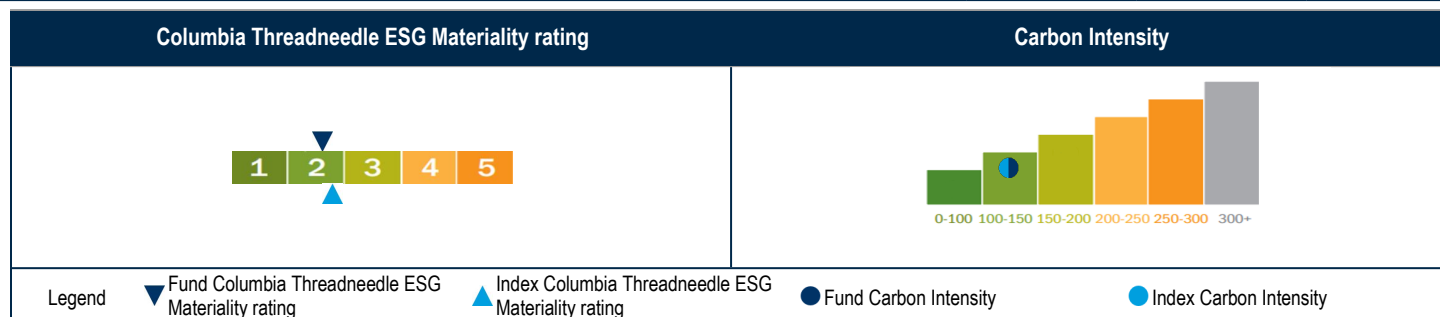

Attribution analysis is calculated on a daily geometric basis unless otherwise stated. Fund returns may result in residual factors when compared to geometric attribution total returns due to data and calculation methodologies. Variation in weights is the average daily under/overweight position of the fund versus the index over the period. The Attribution table and graph only display a maximum of 12 groupings based on the highest portfolio end weight. The Rolling 3 Month Total Effect Attribution summary is based on the same groupings as the Year to Date Attribution.

This fund has an ESG integrated approach, The investment policy of this fund considers ESG factors within the investment decision making process but does not have sustainable investment objective. Please refer to the Fund’s prospectus and Sustainable Investment Guidelines.

Columbia Threadneedle ESG Materiality (ESGM) rating

The Columbia Threadneedle ESG Materiality ratings provide an initial assessment of how well a company is managing its financially material ESG risks. We use the Sustainability and Accounting Standards Board (SASB) framework to identify which are the most financially material ESG risk factors for a company. These factors are industry dependent. The model processes public data for over 10,000 global issuers, and the ratings are updated daily, or as new data is published. The output is a rating from 1 to 5, where companies rated 5 are most exposed to material ESG risks, and those rated 1 are the least exposed (i.e. a lower score signals better quality). We use the ratings in our investment processes to help guide our research and identify opportunities to engage with companies.

Carbon Intensity

This measures carbon emissions relative to the size of a company, measured by revenues not market capitalisation. The measure used is tonnes of CO2 emitted (tCO2e) per \$1M of revenues. We give data for the overall Fund based on the weightings of the securities held, and a comparison with similar data for the Index. Carbon intensity provides an indication of carbon efficiency. This measure enables comparison with other funds and asset classes.

Controversies Exposure

We assess exposure to controversies using three international frameworks covering standards of operating practice: the UN Global Compact; the International Labour Organisation Core Labour Standards; and the UN Guiding Principles on Business and Human Rights. We measure the proportion of the Fund associated with breaches of the three frameworks and give a comparison with similar data for the index.

MSCI ESG Score

The MSCI ESG score uses MSCI’s own methodology to assess companies’ effectiveness at managing their ESG exposure. Companies with the highest ratings are those assessed as best managing their exposures to those material ESG risks and opportunities. If the portfolio score is above the benchmark, the portfolio is overweight in issuers that manage their ESG exposures better than others.

Tilt

The “Tilt” figure shows the bias of the Fund relative to the Index. It is expressed as the arithmetic difference in the weighting. A positive tilt indicates a bias towards a “better” RI profile than the Index.

Measures are being used to compare the ESG characteristics of the fund against the Index. This index also provides a helpful benchmark against which the financial performance can be compared. Accordingly, the index is not designed to specifically consider environmental or social characteristics.

For more information on Responsible Investment (RI) or investment terms used in this document, please see the Glossary published in the Document Centre on our website: <https://www.columbiathreadneedle.co.uk/en/ret/about-us/responsible-investment/>. The decision to invest in the promoted Fund should also take into account all the characteristics or objectives of the promoted Fund as described in its prospectus/ in the information which is to be disclosed to investors in accordance with Article 23 of Directive 2011/61/EU.

The ESG materiality and carbon intensity scores are calculated on a trailing 12-month weighted average. For periods less than 12 months the rolling average will be calculated using the months available. Weighted average is computed using an equal weighting of the metric for each of the business days contained in the prior 12-month period. The carbon intensity denominator “sales” figure is a revenue measure. Coverage is the portfolio’s percent of market value consisting of holdings for each applicable metric. Cash and derivatives are excluded from coverage. MSCI gives issuers a score of “Pass”, “Watch List”, or “Fail” depending on the degree to which they measure against principles in three documents: The UN Global Compact, the International Labor Organization Core Labour Standards, and the UN Principles on Business and Human Rights. An assignment of “Fail” for any of the three causes the holdings to reflect as controversial.

We made some changes to the ESG materiality rating methodology on 17 April 2023. This means some fund and benchmark ratings have changed, but this does not reflect a material change to the portfolio or our investment approach.

Share classes in the table may not be open to all investors, please refer to the Prospectus for further information. Overall impact of costs: Costs and expected returns may increase or decrease as a result of currency and exchange rate fluctuations, if costs are to be paid in another currency than your local currency. The ongoing charges figure (OCF), exit charges (maximum amount to be deducted shown in the table above) and transaction costs show the percentage that may be deducted from your expected returns. The OCF is usually based on the last year's expenses, includes charges such as the Fund's annual management charge and operating costs. Transaction costs displayed are based on a three year average total and are calculated based on FYE Report and Account figures. Where the fund is less than 3 years old the transaction costs are based on proxy and actual costs. All transaction costs are as at 07/03/23. Additional distributor or intermediary fees may not be included. In some cases, the OCF may be based on an estimate of future charges. For a more detailed breakdown please visit www.columbiathreadneedle.com/fees.

Distribution History Of Share Class (Net)

Mar-24

CT American Smaller Companies Fund (US) - Z Acc GBP £0.0171^A

Distributions of income generated by a fund are periodically made in respect of the income available for allocation in each accounting period. Please refer to individual fund XD / Pay Dates (E = Estimated Distribution, A = Actual Distribution) on page 1.
