Asset Allocation

Investment Policy

A cautious asset allocation will provide exposure to a range of asset classes across any economic sector and geographic area in line with the following asset allocation.

The maximum exposure to bonds (which may include government, corporate, sub-investment grade and inflation linked) will be 80%, with the average exposure expected to be between 40% and 60%. The minimum exposure to bonds will be 15%.

The maximum exposure to shares will be 60%, with the average exposure expected to be greater than 40% under normal circumstances. The minimum exposure to shares will be 20%.

The Sub-fund will be fully invested except for an amount to enable ready settlement of liabilities (including redemption of shares) and efficient management. Exposure to cash will vary depending upon prevailing circumstances and although it would normally not exceed 10% of the total value of the Sub-fund, there may be times when the Investment Manager considers stock markets around the world to be overpriced or that a period of instability exists which presents unusual risks. In such cases or during such periods, a higher level of liquidity may be maintained and, if considered prudent, the exposure to cash or near cash instruments held would be increased. Unless market conditions were deemed unusually risky, the increased exposure and period would not be expected to exceed 30% and six months respectively.

The balance of exposure may include alternative investments, such as property or commodities, which are intended to improve the overall risk reward profile of the Sub-fund. Exposure to alternative investments will be limited to 20%.

To provide the above exposure, a minimum of 70% of the Sub-fund will be invested in collective investment schemes (which may include schemes operated by the ACD, associates or controllers of the ACD).

Performance

The IA (Investment Association) Mixed Investment 20% - 60% Shares Sector is used as the comparator. This is considered appropriate for investors to use when comparing performance as the sector is made up of funds with a similar asset allocation as defined by the IA. The sector is not constructed as an Index, therefore as funds enter or leave the sector composition can change, but it is considered that the sector remains a useful and relevant comparator for investors to assess performance within a relevant peer group.
