### Investment risks

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Debt instruments are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the redemption date. Changes in interest rates will result in fluctuations in the value of the fund. The fund uses derivatives (complex instruments) for investment purposes, which may result in the fund being significantly leveraged and may result in large fluctuations in the value of the fund. The fund may invest in contingent convertible bonds which may result in significant risk of capital loss based on certain trigger events.

### Fund Strategy

The fund is predominantly made up of high-quality sterling denominated bonds. We hold a preference for corporate bonds versus government debt. Whilst valuations are now less attractive, we continue to see strong demand for the asset class. In addition, the promising start to the vaccine roll-out in the UK and the removal of the "no deal" Brexit overhang are improving the fundamental outlook after an extremely challenging 2020. Meanwhile, company management teams are still adopting a conservative approach regarding their balance sheets. We also believe that the Bank of England (BoE) would rapidly resume its bond-buying scheme if market conditions were to deteriorate.

Past performance does not predict future returns. Data points are as at month end.
